Market update report for the quarter ended 31 March 2019

Johannesburg, 9 May 2019 - AngloGold Ashanti is pleased to provide an operational update for the quarter ended 31 March 2019. Detailed financial and operational results are provided on a six-monthly basis i.e. at the end of June and December.

- Production, costs and capital expenditures remain on-track to meet annual guidance
- Q1 production of 752,000oz, supported by solid production performances at Geita, Iduapriem, Tropicana and Kibali
- All-in sustaining costs improve 2% year-on-year to \$1,009/oz; Total cash costs improve 5% to \$791/oz
- Strong Adjusted EBITDA margin of 37%, despite lower received gold price and volumes
- South African assets see early wins in safety from new shift arrangements
- All-injury frequency rate improves 34% year-on-year to 4.22 injuries per million hours worked
- Strong exploration results at Tropicana leads to approval of Boston Shaker Underground Project
- Process to review divestment options of remaining South African assets announced; Sadiola and CVSA sales processes ongoing

Quarter 1 2019

Financial and Operating Report

FINANCIAL AND CORPORATE REVIEW

First quarter overview

AngloGold Ashanti delivered a steady start to the year, as the Company continued to focus on safety, efficiencies and improving the overall quality of its portfolio and balance sheet. Delivering year-on-year improvements in both total cash costs and all-in sustaining costs (AISC), the Company recorded a solid Adjusted EBITDA margin of 37% in the three months ended 31 March 2019 and remains on-track to deliver annual guidance across all metrics.

Production from retained operations during the first quarter of 2019 was 752,000oz at an average total cash cost of \$791/oz, compared to 773,000oz at an average total cash cost of \$803/oz from the retained operations during the first quarter of last year. As discussed at the February 2019 results presentation for the full year ended 31 December 2018, the slower-than-normal start from the retained operations was due to unfavourable performances from Siguiri, which was ramping up after completion of the new combination plant; Brazil, which was affected by regulatory stoppages subsequent to the tailings dam wall collapse at Vale; and South Africa, which experienced power disruptions and seismicity challenges. Nonetheless, the portfolio delivered solid year-on-year trends across most of the asset base, with strong production performances from Geita, Iduapriem, Tropicana and Kibali. AISC for the quarter increased slightly to \$1,009/oz compared to \$1,001/oz from retained operations during the first quarter of last year.

The Continental Africa region delivered strong year-on-year gold production, with solid operating performances at Geita, Iduapriem, and Kibali. In Australia, AISC improved significantly as a result of lower capital expenditures in the region with both AISC and total cash costs impacted by favourable exchange rates. Although production was lower from the South Africa region, the performance was solid considering Eskom-related power issues and the care required in managing seismic activity underground. The Americas region experienced lower production due to operational issues. However, we anticipate a stronger second half of 2019 in this region.

For the first time in its history, AngloGold Ashanti passed a year without a fatal accident at any of its operations on 7 April 2019. This represents the collective and cumulative efforts of every individual in the business, as well as the strategic focus on safety. While this is a momentous achievement, there is certainly no complacency and the focus remains on achieving our goal of zero harm, across all workplaces.

The solid operating quarter, was assisted by a 5% improvement in total cash costs, offset by a 2% lower gold price received, lower year-on-year production and sales volumes and adverse working capital movements of \$21m compared to the first quarter of 2018 and as a result cash inflow from operating activities was \$67m compared to \$117m during the first quarter of 2018. Adjusted earnings before interest, tax, depreciation and amortisation (Adjusted EBITDA) decreased by 20% to \$307m in the first quarter from \$383m in the first quarter of 2018. The impact of the above resulted in a free cash outflow of \$109m during the first quarter, compared to a free cash outflow of \$70m reported in the first quarter of 2018.

Key projects remain on track and within budget. Obuasi remains the main area of growth development focus for this year as the Group works towards its first gold pour at the end of this year. The Siguiri Combination Plant is currently ramping up towards full production in June 2019. At Tropicana in Australia, decline development at Boston Shaker is about to commence with mining of the first stope expected in August 2020.

Total capital expenditure (including equity accounted investments) during the first quarter was \$141m, lower than the \$169m reported for the first quarter of 2018. Total capital expenditure included project capital of \$37m, most of which was spent at Obuasi, with some minor residual project capital spent at Siguiri, Mponeng and Kibali. Capital expenditure is expected to rise 50-60% from the first quarter to the second quarter with increased spending anticipated, mainly at Obuasi, Tropicana and the Brazil operations.

Net debt was \$1.78bn at 31 March 2019 ⁽¹⁾, compared to \$1.77bn at 31 March 2018. As at 31 March 2019, net debt to Adjusted EBITDA was 1.27 times, up from 1.14 times at 31 March 2018 and 1.12 times at the end of last year, given the effects of lower production, which is expected to improve as the year progresses, and lower gold price received. The balance sheet remains robust, with strong liquidity and ample headroom under our covenants. The balance sheet is expected to improve further as production steps up during the year, in line with historical trends. Both production and capital expenditure are expected to increase in the remaining three quarters of the year, in line with historical seasonal trends.

⁽¹⁾ In terms of AngloGold Ashanti's covenants, net debt excludes the impacts of IFRS16, Leases, which was effective from 1 January 2019. At 31 March 2019, lease liabilities in terms of the new standard amounted to \$119m, which is not included in the \$1.78bn net debt number.

The full-year guidance⁽²⁾ remains unchanged as follows:

- Production between 3.25Moz to 3.45Moz;
- Total cash costs between \$730/oz and \$780/oz;
- AISC between \$935/oz and \$995/oz, assuming average exchange rates against the US Dollar of ZAR 14.00 (Rand), BRL 3.65 (Brazilian Real), AUD 0.75 (Australian Dollar) and ARS 40.00 (Argentinian Peso), with the Brent crude oil price at \$74/bl average for the year; and
- Capital expenditure is anticipated to be between \$910m and \$990m.

⁽²⁾ Both production and cost estimates assume neither operational, labour or power disruptions or other interruptions, nor further changes to asset portfolio and/or operating mines and have not been reviewed by our external auditors. Other unknown or unpredictable factors could also have material adverse effects on our future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Accordingly, actual results could differ from guidance and any deviation may be significant. Please refer to the Risk Factors section in AngloGold Ashanti's annual report on Form 20-F for the year ended 31 December 2018, filed with the United States Securities and Exchange Commission (SEC).

Comparison of the first quarter 2019 performance versus the same quarter last year is shown below:

Particulars	Q1 2019	Q1 2018	% Variance Q1 2019 vs Q1 2018

⁽¹⁾ Includes administration and other expenses.

⁽²⁾ World Gold Council standard.

⁽³⁾ Retained operations exclude closed and sold operations.

FINANCIAL AND OPERATING REPORT

SAFETY UPDATE

There were no fatalities during the first quarter ended 31 March 2019. Shortly after quarter end, AngloGold Ashanti reached a full 12 months without a fatal accident at all operations for the first time in its history.

The Group All-Injury Frequency Rate (AIFR), the broadest measure of workplace safety, was 4.22 injuries per million hours worked for the first quarter of 2019, compared to 6.35 in the first quarter of last year, a 34% decline demonstrating a continued improvement in our safety performance.

In South Africa, Mponeng - the deepest mine in the world - achieved 1 million fatality-free shifts on 14 January 2019 and 365 fatality-free days on 7 April 2019. Mponeng's AIFR improved by 27% from the same reporting period a year ago. The region's AIFR for the quarter was 9.43, a 25% improvement from 12.58 during the same quarter in 2018.

Continental Africa region's AIFR improved by 46% for the quarter, from 7.17 to 3.89 compared to the first quarter in 2018. The Siguiri, Geita, and Serra Grande mines, as well as the La Colosa, Gramalote and Quebradona projects all achieved injury-free quarters.

OPERATING HIGHLIGHTS

The **Continental Africa** region delivered an 8% year-on-year increase in gold production to 338,000oz at a total cash cost of \$819/oz in the first quarter of 2019 compared to 314,000oz at a total cash cost of \$842/oz in the first quarter of 2018. AISC for the first quarter of 2019 was \$969/oz compared to \$963/oz in the same quarter a year ago. The region's production gains were driven mainly by strong performances in a few of the mines, with Kibali delivering a 21% increase in production, Iduapriem a 12% increase and Geita a 11% increase.

Kibali's production increased due to improved underground output and record shaft hoisting, very stable mill operations and improved metallurgical recovery. Grades improved during the first quarter of 2019 due to a greater contribution of material from the underground tonnes compared to last year when the underground operations were in the initial stages of ramping up production.

AngloGold Ashanti's operating partner at Kibali, Barrick, continues to engage with the DRC government and administration on the issues around the new mine code introduced in 2018, in order to ensure that the mining code equitably balances the interests of the DRC government and the capital providers to allow both to participate fairly in the value creation that the mining industry offers.

In Ghana, Iduapriem's strong production performance is attributable to higher recovered grades in Teberebie cut 1 and cut 3 during the period which, together with a lower stripping ratio, contributed to 15% lower cash costs. This more than offset higher processing and other costs, including dewatering costs, incurred to repair the old pumping infrastructure in preparation for the rainy season and those incurred to safeguard the existing TSF dam wall, as planned.

In Tanzania, Geita's production was supported by strong average recovered grades at 3.58g/t compared to 2.44g/t in the same period last year, which helped to offset the lower throughput due to planned maintenance on the ball mill during the quarter. This increase in grades was due to planned higher feed grade as ore was being sourced from Nyankanga block 5 and Star and Comet cut 2 underground operations.

At Siguiri, in Guinea, production decreased 18% year-on-year as a result of limited flexibility during the commissioning of the Carbon-In-Leach plant. Total cash costs were impacted by the lower volumes treated and higher utilisation of oxide stockpile ore tonnes compared to the previous

period. The mine has started to see grades increase as higher volumes of fresh rock material feed are coming into production following the commissioning of the hard rock crushing and milling circuit in the latter part of the quarter.

In Mali, production remained flat at 22,000oz for the first quarter of 2019 compared to the same period last year. Morila saw an increase in recovered grade due to the availability and treatment of higher-grade material being mined from the Viper pit, partly offset by a 27% decrease in tonnes treated as a result of treatment of harder ore compared to the blend of softer tailings and oxides treated in the previous period. At Sadiola, the mine continued with the stockpile treatment plan.

Production in the **Americas** region was 165,000oz at a total cash cost of \$719/oz for the quarter ended 31 March 2019 compared to 191,000oz at a total cash cost of \$657/oz in the first quarter of 2018. AISC for the first quarter of 2019 was \$967/oz compared to \$843/oz in the same quarter a year ago. Total cash costs were higher reflecting cost escalations across the region and lower by-product contributions, partly offset by favourable exchange rates.

At AngloGold Ashanti Mineração, production was down 8% year-on-year due to lower grades at Córrego do Sítio as a result of geological model changes and geotechnical issues. Additionally, heavy rains and a 21-day work stoppage at Córrego do Sítio due to the regulatory requirement following the tailings dam wall collapse at Vale, impacted production and resulted in higher costs as a consequence.

At Serra Grande, production was lower due to lower tonnages from the underground. However, costs benefited from favourable gold inventory and exchange rate movements.

In the **Australia** region, production was 158,000oz at a total cash cost of \$687/oz for the first quarter ended 31 March 2019 compared to 161,000oz at a total cash cost of \$742/oz in the first quarter of 2018. The AISC for the first quarter of 2019 was \$919/oz compared to \$1,022/oz in the same quarter a year ago. Costs benefited from favourable exchange rates and lower capital spend.

Production at Sunrise Dam was 72,000oz at a total cash cost of \$854/oz compared to 88,000oz at a total cash cost of \$782/oz in the same quarter last year when the mill feed grade was 7% higher. Production for the first quarter of 2019 was also impacted by lower metallurgical recoveries. The Recovery Enhancement Project circuit is meeting Feasibility Study specifications and the focus is now on stabilising the downstream circuits to maximise gold recovery. This, along with work to lift underground production, is part of a holistic strategy to increase gold production and reduce costs.

Tropicana produced 86,000oz at a total cash cost of \$541/oz compared to 73,000oz at a total cash cost of \$661/oz in the same quarter last year. Production was boosted by a 9% increase in mill throughput and an 18% increase in mill feed grade, along with a 1% increase in metallurgical recovery. During the quarter the Boston Shaker Underground Project was approved after a Feasibility Study confirmed that underground mining is technically and financially viable. The project demonstrates robust economics with an anticipated IRR of 39% for a capital investment of \$79.3 million (100%).

The **South African** operations produced 91,000oz at a total cash cost of \$1,037/oz for the first quarter ended 31 March 2019, compared to 107,000oz produced by the retained operations for the first quarter of 2018 at a total cash cost of \$1,049/oz. During the first quarter of 2018, gold production from the South African operations was 158,000oz at a total cash cost of \$1,131/oz. The AISC for the region was \$1,197/oz for the quarter ended 31 March 2019 compared to \$1,225/oz for the same quarter a year ago by the retained operations. Lower total cash costs for the period are attributable to improved operating efficiencies as well as a weaker exchange rate, all partially offset by lower gold output. Cost reduction initiatives, focused on both on- and off-mine cost structures for the smaller production base, are continuing.

At Mponeng, 15% lower production was due to limitations on face length availability as a de-risking process was implemented to manage seismicity in the above 120 Level mining area. Seismicity remains closely monitored and continuous work is undertaken to manage the hazard in the normal course of business.

Following the introduction of the new shift arrangement in November 2018, Mponeng's employees are responding positively in the transitioning phase of these shift arrangements which enable increased face time. The early results observed includes safety improvements, increased blasting frequency, and a better-than-anticipated rate of face advancement. The mine management team, through the implementation committee, is consistently monitoring the implementation of the intended design and adjusting where necessary.

At Mine Waste Solutions (MWS) production was lower mainly due to intermittent power availability from Eskom and inclement weather, which impacted all of the region's surface operations. This had an adverse impact on tonnages processed and plant stability at MWS, ultimately impacting metallurgical efficiencies. Plans are currently being executed to increase delivered grades to recoup some of the lost gold production. This will be done by optimising the mining mix through more efficient blending of feed sources and improving metallurgical efficiencies in the processing plant.

CORPORATE UPDATE

AngloGold Ashanti will be embarking on a process to review divestment options of its remaining South African assets. This process will consider all ownership options, with a view to maximising the value and future prospects of these assets. This is in line with AngloGold Ashanti's ongoing review of its portfolio and a disciplined approach to allocation of capital and other resources to ensure that it generates maximum value for all its stakeholders.

AngloGold Ashanti has dedicated significant time and resources over the past few years to restructure its South African operating portfolio into a more focused business with enhanced operating and financial metrics. The successful completion of the restructuring has resulted in this portfolio comprising a single underground mine, Mponeng, a surface rock dump processing business and a mine waste retreatment operation, Mine Waste Solutions. These assets are now better positioned for the future, with the potential for further enhanced production growth, profitability and free cash generation from the significant remaining ore reserve base of 16.8 million ounces.

Mponeng is ramping up production from the Below 120 Level project, which is expected to give it a lifespan of around eight years, with improved margins from anticipated higher grades within this new mine area. In the medium term (starting in around two years), Mponeng will require additional capital investment to further extend its life and to realise the full potential of this operation.

"We believe that under the right ownership, our South African assets offer a compelling long-term value proposition that may allow for an extension to Mponeng Mine's current life," Chief Executive Officer Kelvin Dushnisky said. "The investment to extend Mponeng's life beyond eight years has very strong competition for capital and other scarce resources from a host of other projects in our portfolio, which at current planning assumptions are more attractive, generating higher returns and quicker payback periods - we have therefore decided to review divestment options for our South African business."

This process is at an early stage and may not ultimately result in any change to the ownership of the South African business. AngloGold Ashanti's priority is to ensure that the process is conducted with the appropriate thoroughness to ensure the best possible outcome for all stakeholders.

UPDATE ON CAPITAL PROJECTS

Update on the Obuasi Redevelopment Project

The project continues to target first gold at the end of 2019 with the commissioning of Phase 1 (2,000tpd). Completion of the project at the end of 2020 (4,000tpd) remains on track. The estimated capital spend to completion remains on budget. Design and procurement are in progress. Demolition of redundant plant infrastructure is close to completion. Refurbishment for Phase 1 commenced. The operating management team is in place, and recruitment and training of the operating team is progressing on schedule. The underground mining contractor has been mobilised and the first development blast was achieved on 1 February 2019.

Siguiri Combination Plant

Construction of the Siguiri combination plant was successfully completed in March 2019. Commissioning of the different sections of the plant is underway. The Carbon-In-Leach circuit was commissioned and first gold from it was poured at the end of 2018. The 30MW power plant was commissioned in October 2018 and is now fully operational providing reliable, low-cost power to the Siguiri mine. The crushing and milling circuits for the treatment of the hard sulphide ore are currently being commissioned and full ramp-up is expected in the first half of 2019. The focus for the year will be to stabilise the combination plant throughput and operating stability following its commissioning.

Boston Shaker

During the quarter, the Company announced the approved development of the Boston Shaker Underground Project at the Tropicana Gold Mine in Western Australia. Boston Shaker will contribute higher grade mill feed, resulting in an improved gold production profile and enhanced cash flow. Importantly, the underground mine will provide improved cash flow during 2021-2023 when the mine plan includes periods of higher waste stripping in the Havana open pit. Ore from the underground mine will enable Tropicana gold production to be maintained at between 450,000-500,000oz per annum (100%) over the next five years, lifting the average to 480,000oz per annum over the five-year period, while also providing attractive returns.

Decline development is expected to commence in the second quarter of 2019 with first gold scheduled for the third quarter of 2020. The portal will be located in the completed Tropicana Pit, to minimise interaction between the open pit fleet working in the Boston Shaker pit and underground equipment.

EXPLORATION UPDATE

See the Exploration Update document on the Company website: www.anglogoldashanti.com for an update on both Brownfields and Greenfields exploration programmes.

Forward-looking statements

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold Ashanti's liquidity and capital resources and capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental health and safety issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements and forecasts are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and business and operational risk management. For a discussion of such risk factors, refer to AngloGold Ashanti's annual report on Form 20-F for the year ended 31 December 2018, which has been filed with the United States Securities and Exchange Commission (SEC). These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

The financial information in this document has not been reviewed or reported on by the Company's external auditors.

Non-GAAP financial measures

This communication may contain certain "Non-GAAP" financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use.
