## NOTES

The Audited Financial Statements for the year ended 31 December 2020 were prepared by the corporate accounting staff of Gold Fields headed by Tzvet Ilarionova, the Group Financial Controller. This process was supervised by Paul Schmidt, the Group's Chief Financial Officer (CFO).

## SEND US YOUR FEEDBACK

We value your feedback. To ensure that we report on issues that matter to our stakeholders please provide any feedback and questions to [investors@goldfields.com](mailto:investors@goldfields.com) or [sustainability@goldfields.com](mailto:sustainability@goldfields.com), or visit [www.goldfields.com](http://www.goldfields.com) to download the feedback form.

## STATEMENT OF RESPONSIBILITY BY THE BOARD OF DIRECTORS

The directors are responsible for the preparation, integrity and fair presentation of the Annual Financial Statements of Gold Fields Limited (Gold Fields) and its subsidiaries (together referred to as the Group or the Company), comprising the Consolidated Statement of Financial Position at 31 December 2020, the Consolidated Income Statement and Consolidated Statement of Comprehensive Income, Changes in Equity and Cash-Flows for the year then ended, the accounting policies and the notes to the Consolidated Financial Statements, as well as the Directors' Report. These financial statements presented on p133 – 216 were prepared in accordance with the International Financial Reporting Standards (IFRS) and the requirements of the South African Companies Act No 71 of 2008 (as amended) (Companies Act), and include amounts based on judgements and estimates made by management.

The directors consider that, in preparing the financial statements, they have used the most appropriate accounting policies, consistently applied and supported by reasonable and prudent judgements and estimates, and that all IFRS that they consider to be applicable have been followed. The directors are satisfied that the information contained in the Annual Financial Statements fairly presents the results of operations and cash-flows for the year and the financial position of the Group at year-end. The directors also prepared the other information included in the Annual Financial Report (AFR) and are responsible for both its accuracy and its consistency with the financial statements.

The directors have responsibility for ensuring that accounting records are kept. The accounting records should disclose with reasonable accuracy the financial position of the Group to enable the directors to ensure that the financial statements comply with the relevant legislation.

The directors are also responsible for such internal controls as they deem necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error, and for maintaining adequate accounting records and an effective system of risk management.

The auditors are responsible for reporting on whether the consolidated financial statements are fairly presented in accordance with the applicable financial reporting framework.

The going concern basis has been adopted in preparing the financial statements. The directors have no reason to believe that the Group, or any company within the Group, will not be a going concern in the foreseeable future, based on forecasts and available cash resources. These financial statements support the viability of the Group.

Gold Fields has adopted a Code of Ethics which is available on the Gold Fields website and which is adhered to by the Group.

The Group's external auditors, PwC Inc., audited the financial statements, and their report is presented on p129 – 132.

### APPROVAL OF CONSOLIDATED ANNUAL FINANCIAL STATEMENTS

The consolidated Annual Financial Statements of Gold Fields, as identified in the first paragraph, were approved by the Board of Directors on 31 March 2021 and are signed on its behalf by:

**Nick Holland**  
Chief Executive Officer (CEO)

Authorised director

**Paul Schmidt**  
Chief Financial Officer (CFO)

Authorised director

## COMPANY SECRETARY'S CERTIFICATE

In terms of section 88(2)(e) of the Companies Act, I certify that the Company has lodged with the Companies and Intellectual Property Commission (CIPC) all such returns required to be lodged by a public company in terms of the Companies Act, and that all such returns are true, correct and up to date.

**Anré Weststrate**  
Company Secretary

31 March 2021

## CEO AND CFO RESPONSIBILITY STATEMENT

In terms of section 3.84(k) of the JSE Listings Requirements, the directors, whose names are stated below, hereby confirm that:

- a. The annual financial statements set out on pages 133 – 216, fairly present in all material respects the financial position, financial performance and cash flows of the issuer in terms of IFRS
- b. No facts have been omitted or untrue statements made that would make the annual financial statements false or misleading
- c. Internal financial controls have been put in place to ensure that material information relating to the issuer and its consolidated subsidiaries have been provided to effectively prepare the financial statements of the issuer
- d. The internal financial controls are adequate and effective and can be relied upon in compiling the annual financial statements, having fulfilled our role and function within the combined assurance model pursuant to principle 15 of the King Code. Where we are not satisfied, we have disclosed to the Audit Committee and the auditors the deficiencies in design and operational effectiveness of the internal financial controls and any fraud that involves directors, and have taken the necessary remedial action.

**Nick Holland**  
Chief Executive Officer

**Paul Schmidt**  
Chief Financial Officer

## CORPORATE GOVERNANCE REPORT

### OVERVIEW

Gold Fields' Board of Directors has always been and remains committed to the highest standards of business integrity, ethical values and corporate governance, which form the foundation of our vision of global leadership in sustainable gold mining. The Board recognises its responsibility to conduct its affairs ethically, transparently, with honesty and accountability, fairly, and socially responsible. In this way, we can ensure that we operate a sustainable business that creates value and certainty for our stakeholders.

Our capital providers increasingly consider non-financial environmental, social and governance (ESG) factors during their analysis to identify material risks and growth opportunities. Their approach is understandable given the long-term, capital-intensive nature of our mining operations and project, as well as the often challenging social and political environments in which we operate. Shareholders not only expect that our business remains profitable in these operating environments, but that we also deliver economic, social and environmental benefits to them.

Our management approach is supported by our commitment to sound and robust corporate governance standards, which is critical for operational and strategic success and, ultimately, the sustainability of our business. A key element is to ensure that Gold Fields complies with all applicable laws and regulations relevant to the Group and its operations. As such, we regularly review corporate governance systems and frameworks to ensure we align with the ever-changing regulatory landscape in the regions where we operate.

During 2020, the Board continued to ensure compliance and uphold governance principles, particularly those set out in the King IV Report on Corporate Governance for South Africa, 2016 (King IV<sup>TM</sup>). Our compliance with the principles of King IV is detailed on p14 – 15.

## STANDARDS, PRINCIPLES AND SYSTEMS

### Material internal and external standards and principles

Internal standards and principles	Listings requirements	Sustainability standards	Business ethics standards
<p>Gold Fields has a comprehensive set of internal standards and principles in place that form the foundation of how we do business. These include:</p> <p><b>Our vision and values:</b> Our values support our vision of global leadership in sustainable gold mining. Furthermore, they serve to guide our directors and employees at every level of the Group.</p> <p><b>Board of Directors' Charter:</b> Our Board Charter details the terms of reference of the Board and its committees, while also articulating the objectives, powers and responsibilities of the Board. Similarly, each Board committee operates in accordance with written terms of references, which are reviewed at least annually to align with the provisions of applicable statutory and regulatory requirements.</p> <p><b>Group Governance Framework:</b> Our Group Governance Framework, approved by the Board in 2020, provides an overview of how governance is applied across the Company.</p> <p><b>Sustainable Development Framework:</b> Gold Fields' Sustainable Development Framework is based on good practice, ESG requirements, as well as our operational requirements. The framework is governed by an overall sustainable development policy statement.</p> <p>The Group has developed a range of policy statements that direct business conduct.</p> <p>✦ <b>These are available online at <a href="http://www.goldfields.com/policies.php">www.goldfields.com/policies.php</a>.</b></p> <p><b>Code of Conduct:</b> Gold Fields' Code of Conduct commits and binds every employee, officer and director of the Company to conduct business in a manner that is ethical and fair. Both the Audit and Social, Ethics and Transformation (SET) Committees of the Board are tasked with ensuring the consistent application of, and adherence to, the Code.</p> <p>✦ <b>The Code is available on our website at <a href="https://www.goldfields.com/Code-of-Conduct">https://www.goldfields.com/Code-of-Conduct</a>.</b></p>	<p>Our primary listing is on the JSE Limited (JSE), and we are therefore subject to the JSE Listings Requirements</p> <p>Gold Fields has a secondary listing on the New York Stock Exchange (NYSE) and, as a foreign private issuer, is subject to the NYSE Listings Requirements and United States (US) federal securities laws and regulations (including the Sarbanes-Oxley Act (2002)).</p> <p>The Board is committed to the principles and recommended practices of King IV, which are entrenched across the Group. The Board is satisfied that every effort was made to comply with all aspects of King IV and, to this end, ensured compliance during 2020.</p> <p>As per King IV, 48 non-binding rules, codes and standards have been adopted by the Audit Committee.</p>	<p>Our Sustainable Development Framework is guided by the International Council on Mining &amp; Metals' (ICMM) 10 principles on sustainable development, their supporting position statements and external assurance thereof.</p> <p>Despite not being a direct participant in the United Nations Global Compact (UNGC), we are guided by and adhere to its 10 principles. Accordingly, we have incorporated its management model into our business activities.</p> <p>All of our eligible operations conform to the World Gold Council (WGC) Conflict-Free Gold Standard. A copy of our Conflict-Free Gold Report and Statement of Conformance, together with the limited assurance opinion.</p> <p>✦ <b>Can be viewed online at <a href="http://www.goldfields.com/sustainability-reporting.php">www.goldfields.com/sustainability-reporting.php</a>.</b></p> <p>Our reporting is guided by the updated International Integrated Reporting Council's Integrated Reporting Framework (International &lt;IR&gt; Framework), as well as the Global Reporting Initiative (GRI) Standards. Our 2020 GRI Content Index also cross-references to the UN Sustainable Development Goals (SDGs) and the Sustainability Accounting Standards Board.</p> <p>✦ <b>It can be viewed at <a href="http://www.goldfields.com/sustainability-reporting.php">www.goldfields.com/sustainability-reporting.php</a>.</b></p> <p>The Group's operations are certified in terms of the International Cyanide Management Code (ICMC), except for Cerro Corona in Peru, which does not use cyanide in its processes. Our operations are also certified in terms of the ISO 45001 occupational health and safety management standard, except for South Deep, which is certified in terms of the OHSAS 18001 standard and planning to migrate to ISO 45001 during 2021.</p> <p>Cerro Corona in Peru, as well as Tarkwa and Damang in Ghana, are certified in terms of the ISO 50001 energy management standard. All our other mines will follow suit.</p> <p>All our mines and regional offices are certified in terms of the ISO 27001 information security management systems standard, except Gruyere, which has undertaken a readiness assessment and will target full certification in 2021, as well as our corporate office and Salares Norte project in Chile.</p>	<p>Our Code of Conduct is aligned with national and international business ethics and anti-corruption standards, including the UN Convention against Corruption (2003) and the Organisation for Economic Co-operation and Development (OECD) Convention on Combating Bribery of Foreign Public Officials in International Business Transactions (1997).</p> <p>We support the principles and processes of the Extractive Industry Transparency Initiative (EITI) through our membership of the ICMM. Ghana and Peru are the EITI-compliant countries in which we operate.</p> <p>We comply with the following legislation and codes:</p> <ul style="list-style-type: none"> <li>• King IV</li> <li>• The Prevention and Combating of Corrupt Activities Act 4 of 2004</li> <li>• The US Sarbanes-Oxley Act (2002), Dodd-Frank Act (2010) and Foreign Corrupt Practices Act (1977)</li> <li>• All other relevant regulatory requirements in the jurisdictions in which Gold Fields operates</li> </ul>

# CORPORATE GOVERNANCE REPORT continued

## BOARD OF DIRECTORS

### Board overview

As the highest governing authority of the Group, Gold Fields' Board of Directors assumes ultimate responsibility for the Company's adherence to sound corporate governance standards, and ensures that all business decisions and judgements are made with integrity, reasonable care, skill and diligence. The Board's objectives and responsibilities are articulated in its Charter. Similarly, each of the Board's committees operates in accordance with its written terms of reference, which are reviewed and approved on an annual basis.

In terms of Gold Fields' Memorandum of Incorporation (Mol), which can be accessed at [www.goldfields.com/standards-and-principles.php](http://www.goldfields.com/standards-and-principles.php), the Board must have a minimum of four and a maximum of 15 directors. Currently, the Board comprises of 10 directors – two executive directors and eight independent non-executive directors (NEDs). Gold Fields' Board has had a majority of independent NEDs since the Company was founded in 1998. Upon advisement by the Nominating and Governance Committee, the Board ensures that reputable persons of well-known competence and experience, who are willing to devote a sufficient part of their time to the Company, are elected as independent directors. Each director offers a range of relevant knowledge, expertise, technical experience and business acumen, enabling them to exercise independent judgement during Board deliberations and decision-making.

The Nominating and Governance Committee also ensures that the Board has adequate diversity in respect of race, gender, culture, age, field of knowledge, skills, experience, business expertise, geographic and academic backgrounds. This is in line with the Company's commitment to inclusivity and diversity. The composition of the Board's committees was reviewed and approved at the November 2020 Board meeting.

The role of NEDs, who act independently of management, is to guide the Company, provide independent oversight, contribute to effective governance, and protect the interests of both the Company and its shareholders, including those of minority shareholders.

The roles of the Board Chairperson and Chief Executive Officer (CEO) are kept separate. Cheryl Carolus, a NED, serves as our Board Chairperson while Rick Menell served as Gold Fields' Deputy Chairperson and lead independent director until his resignation with effect from 10 March 2021. Nick Holland was Gold Fields' CEO for the entire period under review. He retired with effect from 31 March 2021.

The Board is kept informed of all developments relating to the Group, primarily through its executive directors, executive management and the Company Secretary. Furthermore, the Board stays up to date through a number of other mechanisms, including employee climate surveys, newsletters and internal staff communication.

NEDs have unrestricted access to the Group's management and access to the external auditors, when necessary, and are entitled to seek independent professional advice, at the Group's expense, on any matters pertaining to Gold Fields. A brief curriculum vitae (CV) for each Board member is detailed on p11 – 13 of this report.

### Chief Financial Officer

Paul Schmidt has served as Gold Fields' Chief Financial Officer (CFO) since his appointment to the position on 1 January 2009. In accordance with the JSE Listings Requirements, the Audit Committee considered and unanimously agreed that Mr Schmidt executed his duties satisfactorily and with the required levels of expertise and experience during 2020.

The Audit Committee is of the opinion that Mr Schmidt, together with other members of his financial management team, managed the Group's financial affairs effectively during the 2020 financial year.

### Board appointments, rotation and retirement

The appointment of directors is governed by a formal process. The Nominating and Governance Committee assists the Board in identifying suitable candidates, as well as evaluating such candidates from time to time. The Board Chairperson and Deputy Chairperson are appointed on an annual basis by the Board after a review of their performance and independence. In line with recommendations by King IV, the Board conducts a thorough annual evaluation of the independence of directors, and specifically where directors have served on the Board for nine or more years. The Board was satisfied that all its NEDs met its criteria for the 2020 financial year.

Together with management, the Nominating and Governance Committee develops and facilitates an induction programme for new Board members to ensure their understanding of Gold Fields and the business environment in which it operates. The Committee also assesses the commitments of non-executive candidates to ensure their availability to fulfil their responsibilities.

In accordance with Gold Fields' Mol, one-third of all directors (including executive directors) shall retire from office at each Annual General Meeting (AGM). The first to retire are those directors appointed as additional members of the Board during the year, followed by the longest-serving members. The Board, assisted by the Nominating and Governance Committee, recommends the eligibility of retiring directors (subject to availability and their contribution to the business) for reappointment. Retiring directors can be re-elected immediately by the shareholders at the AGM.

### Term limit of non-executive directors

In terms of the Board Charter, a director is required to retire at the AGM following the year in which they turn 70 years of age, unless the retirement age is extended by a fixed period at the discretion of the Board. A director may continue to serve longer than nine years, provided the Board in its entire discretion and unanimous decision determines that it is in the best interest of the Company and its shareholders to extend the director's service for the additional period.

### Directors' dealings in shares of Gold Fields

Gold Fields' Board members and employees are informed of closed and prohibited periods for share dealings by the Company Secretary, as prescribed by the Gold Fields share dealing policy, which is in line with listings requirements and applicable legislation. Closed and prohibited periods remain in force until quarterly, biannual and annual results are published. This was done on a quarterly basis during 2020. Closed periods will also be in place should the Company trade under a cautionary announcement. Any directors' dealings (including executive directors) require the pre-approval of the Chairperson. The Company Secretariat keeps a register of such dealings.

### Board remuneration

NEDs are remunerated for their services as members of the Board, including the respective subcommittees they attend annually, ad-hoc committees officially approved by the Board and, where applicable, travel expenses to attend Board meetings. Shareholders approve these fees annually at the Company's AGM. Further details of NEDs' and executive directors' remuneration can be found on p40 – 54 of the Remuneration Report.

### Board of Directors' Charter

During the year, the Board reviewed the Board of Directors' Charter and subcommittees' terms of reference to ensure it aligns with the recommendations of King IV. A summary of how Gold Fields applied the principles of King IV is detailed on p14 – 15.

### Company Secretary

The Company Secretary provides company secretarial services and oversees Board governance processes in accordance with applicable regulation, including the Companies Act, King IV, and the JSE and NYSE Listings Requirements. The Company Secretary attends all meetings held by the Board and its subcommittee. The Board has access to the Company Secretary, who guides the directors in the execution of their duties and responsibilities. The Company Secretary is not a director of the Group and has an arm's-length relationship with the Board.

During the year under review, the Company Secretary oversaw relevant Board governance matters and assisted the Board and its committees with annual plans, agendas, minutes and terms of references.

Taryn Harmse, Executive Vice President (EVP): Group Legal and Compliance, held the position of interim Company Secretary from 1 July 2019 to 31 May 2020. Anré Weststrate was appointed Company Secretary, effective 1 June 2020. The Board is satisfied that Ms Weststrate is competent, qualified and has the necessary expertise and experience to fulfil the role.

### Application of King IV within Gold Fields

The Board aligns its processes, practices and structures with King IV and continued to review and refine the Group's approach to ensure and enhance compliance with King IV during 2020. A full register of the King IV principles, and the extent of the Company's compliance therewith, is available on p14 – 15, and will also be placed on the website at [www.goldfields.com/standards-and-principles.php](http://www.goldfields.com/standards-and-principles.php).

### Board attendance

The Board is required to meet at least four times a year. The Board Charter allows the Board to conduct its meetings by electronic communication. Therefore, as a result of Covid-19 restrictions imposed in March 2020, the Board conducted its meetings electronically during 2020. In addition, the Company held a virtual AGM in August 2020, after it had been postponed from May 2020 because of Covid-19 restrictions. The Board convened seven times during 2020, as three special Board meetings were held to deliberate on urgent substantive matters. Regular special Risk Committee meetings were held during 2020 to consider the ongoing impacts of Covid-19 on the Company's operations and employees, as well as the measures applied to mitigate these. The Nominating and Governance Committee held five special meetings to consider the CEO succession process.

To prepare for Board meetings, all directors are provided with the necessary information needed in the form of comprehensive Board packs, which are collated in advance by management in preparation for each Board or subcommittee meeting. These packs enable our directors to discharge their responsibilities effectively and efficiently during meetings. The Board agenda and meeting structure focus on strategy, sustainable development, finance, performance monitoring, governance and other related matters. During the year under review, Board meetings and some subcommittee meetings were preceded by closed-session meetings by NEDs. The Chairperson of the Audit Committee attends the closed sessions of the SET Committee to receive the fraud and hotline reports, as these are further reported on during Audit Committee meetings. Directors are asked to recuse themselves from meetings on any matters in which they may be conflicted.

The full Directors' Report is on p18 – 22.

## BOARD COMMITTEES

The Board has eight standing committees, established in compliance with the Companies Act and JSE Listings Requirements. These committees have delegated authority from the Board. Members of the committees are all independent NEDs, and the CEO, CFO and various members of management are permanent invitees to these meetings. Each Board committee is chaired by an independent NED. The Board also establishes ad-hoc committees to deal with matters deemed critical by the Board.

- ✦ The Board's committees operate in accordance with written terms of reference and have a set list of responsibilities, which can be accessed at [www.goldfields.com/standard-and-principles.php](http://www.goldfields.com/standard-and-principles.php). In line with King IV recommendations, the Board reviews the terms of reference of all subcommittees every year and, if necessary, adopts any approved changes. Subcommittees are required to evaluate their effectiveness and performance annually, and to report findings to the Board for consideration.

The written terms of reference and responsibilities of the Board and its committees are set out below.

### Board

The Board consists of two executive directors and eight NEDs.

The Board is responsible for developing Gold Fields strategy, and subsequently monitors the Group's performance against this strategy. The Board annually reviews its governance practices, and is satisfied that all aspects of King IV principles were met in 2020. The Board Charter compels directors to promote the vision of the Company, while upholding sound principles of corporate governance. Certain responsibilities are delegated to Board subcommittees without abdicating the Board's ultimate accountability. The delegation of authority to the Board's subcommittees is formalised in Board-approved terms of references for each committee.

- ✦ **The terms of reference for the Board and its subcommittees, as well as directors' responsibilities in terms of the Board Charter, can be accessed on the Company website at [www.goldfields.com/standards-and-principles.php](http://www.goldfields.com/standards-and-principles.php).**

### Key focus areas during 2020

- The impacts of Covid-19 on the Group, its employees and stakeholders, as well as the appropriate mitigating measures
- Commencing the CEO succession process
- Monitoring South Deep's performance
- Review and approval of the remuneration philosophy and policy, taking into consideration the impacts of Covid-19
- Approving the capital raising to fund the Salares Norte project
- Continued focus on capital allocation and the approval of the Group's capital framework
- Approved bonds and debt restructuring

The Board performed an internal assessment of its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### Nominating and Governance Committee

The Nominating and Governance Committee consists of four independent directors.

This Committee develops the Group's robust approach to corporate governance and recommends sound governance principles to the Board. The Committee reviews and recommends, if necessary, changes to the structure, composition and size of the Board, its committees and management to improve its effectiveness. It considers the rotation of directors and makes appropriate recommendations on succession, whereupon it identifies and evaluates nominees, making recommendations for the appointment of suitable candidates. The Committee identifies successors for the Board's Chairperson, Deputy Chairperson or lead independent NEDs, as well as the CEO, and makes recommendations on these successors to the Board. It considers the Board subcommittees' mandates, the selection and rotation of committee Chairpersons and members, and makes recommendations to the Board. The Committee reviews the suitability of committee members and conducts annual performance evaluations with recommendations to the Board.

## CORPORATE GOVERNANCE REPORT continued

To ensure risk management oversight within the Nominating and Governance Committee's scope, it provides assurance to the Risk Committee on those risks apportioned to it as mandated by the Board.

### Key focus areas during 2020

- Board skills, diversity and composition assessment
- Succession planning for directors and senior executives
- Succession for the CEO
- Board training and evaluation
- Governance compliance matters

The Nominating and Governance Committee assessed its performance and effectiveness internally during the period under review and was found to be functioning and discharging its duties satisfactorily.

### Audit Committee

The Audit Committee consists of four independent directors.

The Audit Committee contributes to Gold Fields' value creation by overseeing the Company's financial affairs and integrated reporting on financial statements and sustainability, as well as public announcements on financial data. The Committee monitors the suitability and independence of external auditors, including their scope and effectiveness. It has oversight of combined assurance, the effectiveness of the Group's internal audit controls and function. To ensure risk management oversight within the Audit Committee, it provides assurance to the Risk Committee Chairperson on those risks apportioned to it as mandated by the Board.

The Committee's formal terms of reference are reviewed annually and included in its Board-approved Charter. The Board is satisfied that the Committee complied with these terms, as well as the legal and regulatory responsibilities as set out in the Companies Act, King IV, JSE Listings Requirements, and the relevant NYSE Listed Company Manual rules.

### Key focus areas during 2020

- The impacts of Covid-19 on the duties of the Committee and appropriate mitigation measures
- Reviewed PwC's independence and performance as external auditors, finalised their audit and non-audit fees, and resolved to recommend its reappointment as the Company's auditors to the Board and shareholders
- Ensured the external assurance of non-financial data
- Reviewed interim and final dividend proposals
- Oversaw the statutory financial and integrated reporting process, as well as the Form 20-F
- Reviewed the IAR, Annual Financial Report (AFR) and Form 20-F
- Reviewed Group funding and refinancing matters

### Disclosures

- Systems are in place to ensure combined assurance
- Systems are in place to govern information and technology (IT) and its effectiveness
- Adoption of a responsible and transparent tax policy and strategy
- Systems are in place to govern and manage compliance

The Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

The 2020 Audit Committee Report can be found on p23 – 25.

### Remuneration Committee

The Remuneration Committee consists of five independent directors.

The Company's remuneration policies, as well as details of directors' fees and equity-settled instruments, are contained in the Remuneration Report on p26 – 54.

This Committee contributes to value creation by overseeing the Company's Remuneration Policy and how this links to performance outcomes against the Group's strategy, encouraging alignment with shareholders' expectations and the principles of fairness and responsibility. It ensures that contractual terms relating to any potential termination of the Group's executive directors and Executive Committee (Exco) members, and any payments made, are fair to both parties and that failure is not rewarded to ensure that the duty to mitigate any loss is fully recognised. It further provides oversight and management of remuneration-related risks. To ensure risk management oversight within the Remuneration Committee, it provides assurance to the Risk Committee on those risks apportioned to it as mandated by the Board.

### Key focus areas during 2020

- Deliberated on the approach to Covid-19 in terms of assessing remuneration objectives
- Initiated the process of increasingly linking components of ESG to remuneration
- Reviewed specific conditions related to the regional cash-settled long-term incentive plan (LTIP) awards
- Oversaw all remuneration processes for the Group, with a focus on enhancing the link between performance and reward

- Ensured strategic alignment between Group, regional and personal scorecards
- Engaged with and responded to shareholder remuneration questions and reports from proxy advisers
- Approved a malus policy to complement the already-implemented clawback policy, and continued to conduct market evaluation and benchmarking in relation to minimum shareholding requirements and anti-hedging policies for executives
- Commissioned an independent benchmarking study of NED fees and subsequently recommended a 4% increase in these fees, which 99% of shareholders voted in favour of at the AGM held in August 2020

The Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### **Safety, Health and Sustainable Development Committee**

The Safety, Health and Sustainable Development (SHSD) Committee consists of six independent directors.

This Committee contributes to value creation by monitoring all matters of safety, health and sustainable development, including the consideration of investigations into any relevant incidents, and makes recommendations to the Board on policies and guidelines on these matters. The Committee assesses and approves sustainable development policies that are applicable to the Group's operations. It monitors the Group's operations against regulations, policies and standards and makes specific recommendations regarding the investigation of incidents. The SHSD Committee further considers national and international regulatory and technical developments that relate to sustainable development when making recommendations to the Board. It also offers recommendations to the Board on the engagement of external assurance partners with the requisite credentials.

To ensure risk management oversight within the SHSD Committee, it provides assurance to the Risk Committee on those risks apportioned to it as mandated by the Board.

#### **Key focus areas during 2020**

- The impacts of Covid-19 on the duties of the Committee and appropriate mitigation measures
- Reviewed the fatal incident at South Deep and developed learnings
- Benchmarked Gold Fields' ESG reporting and performance relative to its peers
- Reviewed the causes of major internal and industry incidents to prevent their occurrence at Gold Fields
- Reviewed emergency drill procedures at mines
- Approved the updated Group health and safety strategy
- Monitored the implementation of the Courageous Safety Leadership training programme
- Reviewed quarterly tailings and geotechnical management updates
- Reviewed and recommended to the Board updated Environmental, Climate Change, Sustainable Development policy statements
- Reviewed SHSD risks and the mitigation actions on a quarterly basis

The SHSD Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### **Capital Projects, Control and Review Committee**

The Capital Projects, Control and Review Committee consists of six independent directors.

This Committee considers and evaluates new capital projects and assures the Board that the Company has used appropriate and efficient methodologies in evaluating and implementing capital projects valued at more than US\$200m. The Committee reviews the results attained in completion of each project against the work undertaken. It monitors progress throughout the project cycle and periodically reports its findings to management and the Board.

#### **Key focus areas during 2020**

- The impacts of Covid-19 on the duties of the Committee and appropriate mitigation measures
- Implementation of South Deep capital project
- Reviewed and approved the Group capital report
- Implementation of the Gruyere project
- Implementation of the Damang Reinvestment project
- Implementation of Tarkwa contractor mining
- Monitoring progress of the Salares Norte project

The Committee continues to review the results attained on completion of each project against the authorised work undertaken.

The Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### **SET Committee**

The SET Committee consists of six independent directors and one executive director, as required by the Companies Act. The Audit Committee Chairperson, who is one of the six independent directors, only attends the closed session of the SET Committee to receive a report on hotline, fraud, as well as governance and ethics matters.

## CORPORATE GOVERNANCE REPORT continued

The SET Committee performs its role as contemplated in the Companies Act and its regulations, with oversight responsibilities on matters of social, ethics, security, labour, transformation, community, corruption, land (within the social context), human rights and stakeholder relationships, and ensures that the Company upholds the principles of good corporate citizenship in dealing with these matters. The Committee adds to value creation by contributing to socio-economic development (SED) by adhering to relevant legislation and regulations. It ensures adherence to fair labour and employment policies and practices by offering oversight over ethics management, transformation, localisation and compliance with laws and regulations. It also reviews and monitors stakeholder engagements and provides strategic guidance on these matters.

To ensure risk management oversight within the SET Committee, it provides assurance to the Risk Committee on those risks apportioned to it as mandated by the Board.

### Key focus areas during 2020

- The impacts of Covid-19 on the duties of the Committee and appropriate mitigation measures
- Oversight of social and transformation initiatives at the corporate office and regions in which Gold Fields operates
- Oversight of social and economic development in our host communities, sound corporate citizenship, labour and employment practices, employment equity, diversity and inclusion, stakeholder relations and value creation, human rights, branding and reputation, and ethics and governance
- Oversight of the regions' foundations and trusts, including the South Deep Education Trust and the South Deep Community Trust

The SET Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### Risk Committee

The Risk Committee consists of four independent directors.

The Risk Committee ensures that effective risk management policies and strategies are in place and recommended to the Board for approval. The Committee reviews the adequacy of the risk management charter, policy and plan. The Committee regularly considers the Company's key risks, especially from a materiality perspective. The Chairperson, as mandated by the Board, receives assurances from the Chairpersons of other Board subcommittees regarding oversight assurance of risk management within their respective scopes.

### Key focus areas during 2020

- The impacts of Covid-19 on the duties of the Committee and appropriate mitigation measures
- Cybersecurity risk assessments
- Consideration and approval of combined assurance
- Consideration and approval of Group and regional risk registers

The Risk Committee internally assessed its performance and effectiveness during the period under review and was found to be functioning and discharging its duties satisfactorily.

### Ad-hoc Investment Committee

The objective of the ad-hoc Investment Committee is to consider and, where appropriate, make recommendations to the Board on strategic, organisational and structuring options, including investment and divestment opportunities, to achieve the Company's strategic objective of maximising shareholder returns sustainably.

It is the responsibility of this Committee to:

- Consider strategic alternative corporate organisational options and structures
- Assess new material investment or divestment opportunities, on the basis set out in the paragraph above
- Review the outcomes of all options or opportunities against specified work plans identified among the Committee members and management
- Monitor progress throughout the process of material corporate transactions
- Periodically report its findings and recommendations to the Board

### Executive Committee

Gold Fields' Exco is not a Board subcommittee. It is primarily responsible for implementing the Company's strategy, as well as carrying out the Board's mandates and directives. Exco meets monthly to review the Company's performance against set objectives and develops Company strategy and policy proposals for consideration by the Board. Exco also assists the Board in executing the Company's disclosure obligations, and a series of guidelines on disclosure has been disseminated throughout the Company. Exco consists of the principal officers and executive directors of Gold Fields – 12 members in total.

Each of Gold Fields' regional operating subsidiaries has Board and regional Exco structures in place to ensure sound corporate governance practices and standards. At least one of the Company's executive directors serves on the boards of the operating subsidiaries.

## DIRECTORS

### Independent non-executive directors

#### Cheryl Carolus (62)

Chairperson of the Board and Chairperson of the Nominating and Governance Committee  
BA Law; Bachelor of Education, University of the Western Cape; Honorary Doctorate in Law, University of Cape Town (UCT)

**Appointed to the Board:** Director 2009, Chairperson 2013

**Experience and expertise:** Governance and compliance, social development, training and development, people management, biodiversity and environment

Ms Carolus has served on the boards of numerous listed companies, including De Beers and Investec. She is a Board member of many not-for-profit organisations, including the International Crisis Group, Soul City, The British Museum (appointed by Her Majesty Queen Elizabeth) and the CyberPeace Institute, and is Chairperson of the SA Constitution Hill Education Trust.

Previously, Ms Carolus served as Chairperson for South African Airways and the South African National Parks Board, and served on the boards of numerous public and private partnerships that address socio-economic challenges, including the WWF International and WWF South Africa. Additionally, she served as South Africa's High Commissioner to the United Kingdom (UK) from 2001 to 2004.

Ms Carolus played a role in the liberation struggle of South Africa and the constitution-making process. She was awarded an honorary doctorate in law from UCT for her contribution to freedom and human rights. In 2014, she was awarded the French National Order of Merit by the Government of France.

#### Rick Menell (65)

Deputy Chairperson of the Board and Chairperson of the Capital Projects, Control and Review Committee  
BA (Hons), MA (Natural Sciences Geology), Cambridge University; MSc (Mineral Exploration and Management), Stanford University

**Appointed to the Board:** Director 2008, Deputy Chairperson 2015 (Resigned 10 March 2021)

**Experience and expertise:** Executive management, geology

Mr Menell became an NED of Sibanye Gold in 2013. He has over 41 years' experience in the mining industry, including serving as the President of the Chamber of Mines of South Africa, President and CEO of Teal Exploration & Mining, as well as executive Chairperson of Anglovaal Mining and Avgold. Mr Menell retired from both Weir Group Plc and Credit Suisse Securities International during 2020, where he served as a senior independent NED and Senior Adviser, respectively. He also serves as a director for a number of unlisted companies and not-for-profit organisations. Mr Menell resigned from the Board effective 10 March 2021. Mr Menell resigned from the Board effective 10 March 2021.

#### Peter Bacchus (52)

Chairperson of the Risk Committee  
MA (Economics), Cambridge University

**Appointed to the Board:** 2016

**Experience and expertise:** Investment banking, financing, mergers and acquisitions

Mr Bacchus is Chairperson of independent merchant bank, Bacchus Capital Advisers. He has acted as the Global Head of Mining and Metals and Joint Head of European Investment Banking at Investment Bank Jefferies, and served as Global Head of Mining and Metals at Morgan Stanley. Prior to that, he was Head of Investment Banking, Industrials and Natural Resources at Citigroup in Australia.

Mr Bacchus has spent more than 25 years in investment and corporate banking with a focus on the global natural resources sector, and is a member of the Institute of Chartered Accountants, England and Wales. He is also an NED of UK-listed mining group Kenmare Resources, Australian-listed Galaxy Resources, and Chairperson of Space for Giants, an African-focused conservation charity.

#### Alhassan Andani (60)

BSc (Agriculture), University of Ghana; MA (Banking and Finance), Finafrica Institute in Italy

**Appointed to the Board:** 2016

**Experience and expertise:** Investment banking, financing

Mr Andani is currently CEO and executive director of Stanbic Bank Ghana, the Board Chairperson of the Ghana Council for Scientific and Industrial Research and a director of SOS Villages Ghana. He has held various other corporate directorships in the past.

## CORPORATE GOVERNANCE REPORT continued

### **Carmen Letton (55)**

Chairperson of the SET Committee  
PhD in Mineral Economics (UQ); Bachelor Mining Engineering (WASM)

**Appointed to the Board:** 2017

**Experience and expertise:** Mining engineering, corporate governance, risk management, corporate strategy

Dr Letton is a mining engineer and mineral economist (PhD), with 34 years of global mining exposure, working for major and mid-tier mining houses in senior management and leadership roles, with experience in operations, corporate strategy development, engineering and design, asset and business development, continuous improvement, and mergers and acquisitions.

Currently, Dr Letton is the Head Open Resource Development Planning and Life of Asset Planning for the Technical and Sustainability Group in Anglo American. She has experience in large and medium-sized mining assets in both the Australian and international mining environment, challenging operations leadership, complex technical roles, and expertise in due diligence, corporate governance, risk management, corporate strategy and asset development.

Core skills and accountabilities include operations executive general management and leadership of all key mine engineering disciplines associated technical services areas (mine engineering, metallurgy and geology).

### **Yunus Suleman (63)**

Chairperson of the Audit Committee  
BCom, University of KwaZulu-Natal (formerly Durban Westville); BCompt (Hons), University of South Africa (UNISA); CA(SA); CD(SA)

**Appointed to the Board:** 2016

**Experience and expertise:** Auditing, financial accounting, governance

Mr Suleman serves as an independent NED of Liberty Holdings Limited, Liberty Group Limited and Albaraka Bank Limited. He has been appointed lead independent director of Liberty with effect from May 2020. He was an independent NED of Tiger Brands until November 2018.

Mr Suleman has over 35 years' experience in the auditing and accounting profession – first at Arthur Andersen and then at KPMG when the two companies merged in 2002. He was Chairperson of KPMG South Africa until February 2015. He also chaired the KPMG Foundation. Since leaving KPMG, Mr Suleman has served as executive Chairperson of Sulfam Holdings.

### **Terence Goodlace (61)**

Chairperson of the SHSD Committee  
MBA (Business Administration), University of Wales; BCom, UNISA; NHDip and NDip (Metalliferous Mining), Witwatersrand Technikon; MDP, UCT

**Appointed to the Board:** 2016

**Experience and expertise:** Mining, capital projects, commercial and operational management, risk management, mineral resource management

Mr Goodlace's mining career commenced in 1977, spanning more than 42 years. He spent the majority of his career at Gengold, which merged with Gold Fields of South Africa in 1998 to form Gold Fields. He became Chief Operating Officer (COO) in 2008. He has significant experience in leading underground and open pit operations in Australia, Africa and South America. He then spent three years as the CEO of Metorex and served on the Impala Platinum Board for two years as an independent NED, and four and a half years as CEO. Mr Goodlace was appointed Chairman of Southern Palladium Limited on 29 March 2020 and is also currently an independent NED of Kumba Iron Ore Limited and AfriTin Mining Limited.

### **Steven Reid (65)**

Chairperson of the Remuneration Committee  
BSc (Mineral Engineering), South Australian Institute of Technology; MBA, Trium Global Executive; ICD.D, Institute of Corporate Directors

**Appointed to the Board:** 2016

**Experience and expertise:** Mining engineering, risk management, compensation management

Mr Reid has 43 years of international mining experience and has held senior leadership roles in numerous countries. He served as a director of SSR Mining from January 2013 to September 2020 and as a director of Eldorado Gold since May 2013, where he is currently the Chairperson. He served as COO of Goldcorp from January 2007 until his retirement in September 2012, and prior to that was the Company's EVP in Canada and the USA. Before joining Goldcorp, Mr Reid spent 13 years at Placer Dome in numerous corporate, mine management and operating roles. He also held leadership positions at Kingsgate Consolidated and Newcrest Mining, where he was responsible for the Asian and Australian operations.

### **Phuthi Mahanyele-Dabengwa (50)**

BA Economics, Rutgers, State University of New Jersey; MBA, De Montford University, Leicester; Executive Development Programme, Kennedy School of Government, Harvard University

**Appointed to the Board:** 2018

**Experience and expertise:** Financial, infrastructure development, commercial

Ms Mahanyele-Dabengwa joined Naspers South Africa in 2019 as CEO. She previously ran a private equity business, Sigma Capital, which she founded in 2016 after spending 12 years with the Shanduka Group. At Shanduka, she first managed Shanduka Energy before becoming CEO of the group of companies. Prior to Shanduka she worked at the Development Bank of Southern Africa as Head of Project Finance. Prior to that, she worked at an international investment banking firm, Fieldstone Private Capital Group for six years.

Ms Mahanyele-Dabengwa is an NED at Vodacom and Discovery Insure. She is also on the advisory board of Stellenbosch University's Business School. In 2019, she was chosen as Forbes/CNBC Africa Businesswoman of the Year. Ms Mahanyele-Dabengwa resigned from the Board effective 28 February 2021.

## **Executive directors**

### **Nick Holland (62)**

Outgoing CEO

BCom, BAcc, University of the Witwatersrand (Wits); CA(SA)

**Appointed to the Board:** Executive director 1997, CEO 2008 (Retired 31 March 2021)

**Experience and expertise:** Finance, mining, management

Prior to his appointment as Gold Fields' CEO, Mr Holland was the Company's CFO. He has more than 39 years' experience in financial management, of which 30 years were in the mining industry. Before joining Gold Fields, he was Financial Director and Senior Manager of Corporate Finance at Gencor. Mr Holland retired as CEO and executive director on 31 March 2021.

### **Paul Schmidt (53)**

CFO

BCom, Wits; BCompt (Hons), UNISA; CA(SA)

**Appointed to the Board:** 2009

**Experience and expertise:** Finance, mining, management

Prior to his appointment as CFO of Gold Fields, Mr Schmidt held the positions of acting CFO from May 2008 and Financial Controller from April 2003. He has more than 23 years' experience in the mining industry.

## **Board appointment since 2020 year-end**

### **Chris Griffith (55)**

Incoming CEO

BEng (Mining) (Hons), University of Pretoria, Business Leader Programme, Duke University; Leadership Development Programme, UNISA

**Appointed to the Board:** Executive director and CEO 1 April 2021

**Experience and expertise:** Mining, management, engineering

Prior to his appointment as Gold Fields' CEO, Mr Griffith served as the CEO of Anglo American Platinum between September 2012 and April 2020. He was previously CEO of Kumba Iron Ore from 2008 to 2012. Prior to that, he served as Anglo American's Head of Operations for joint ventures. He joined Anglo American Platinum in 1990 and held various management positions at two of its mines before being moved into the wider leadership team at Anglo American.

### **Philisiwe Sibiya (44)**

BCom (Hons), University of KwaZulu-Natal (UKZN); CA(SA)

**Appointed to the Board:** March 2021

**Experience and expertise:** Executive management, finance, telecommunications

Ms Sibiya, a seasoned business executive, has nearly 20 years of management experience across Africa. After holding various senior financial roles, including CFO at MTN South Africa, she successfully transitioned into the role of CEO for MTN Cameroon – the first female appointed into a CEO position within the MTN Group. She is the founder and CEO of Shingai Group, and a non-executive board member of JSE-listed AECI Limited, Investec PLC and Investec Ltd.

# CORPORATE GOVERNANCE REPORT continued

## APPLICATION OF KING IV WITHIN GOLD FIELDS

The Board is committed to the principles and recommended practices of King IV and, to this end, ensured material compliance during 2020. The table below provides an overview of Gold Fields' compliance with the principles. Should gaps be identified, the Board instructs management to address these as work in progress.

Principles	Principle application
<b>Part 5.1: Leadership, ethics and corporate citizenship</b>	
<b>Leadership</b>	
Principle 1: The governing body should lead ethically and effectively.	The Board, Gold Fields' governing body, through its various subcommittees is confident on a prospective basis that the combined inputs of its committees produce conformity with this principle. The Board exhibits the requisite levels of integrity, competence, responsibility, accountability, fairness and transparency.
<b>Organisational ethics</b>	
Principle 2: The governing body should govern the ethics of the organisation in a way that supports the establishment of an ethical culture.	The SET Committee comprises of five non-executive members and one executive member. The majority of the members are independent. The Committee ensures conformity with this principle through the Code of Ethics and the Group Disciplinary Code that set out sanctions to be followed.
<b>Responsible corporate citizenship</b>	
Principle 3: The governing body should ensure that the organisation is and is seen to be a responsible corporate citizen.	The Board, through the SET and the SHSD Committees, ensures conformity with this principle. The SHSD Committee is committed to the 10 principles of the ICMM and the UNGC's 10 sustainable development principles, and ensures compliance therewith.
<b>Part 5.2: Strategy performance and reporting</b>	
<b>Strategy and performance</b>	
Principle 4: The governing body should appreciate that the organisation's core purposes, its risks and opportunities, strategy and business model, performance and sustainable development are all inseparable elements of the value creation process.	The Board conforms to this principle. The Board oversees strategy formulation and execution, and sets performance targets which are agreed upon with management. Annually, the Board, together with management, reviews the strategy.
<b>Reporting</b>	
Principle 5: The governing body should ensure that reports issued by the organisation enable stakeholders to make informed assessments of the organisation's performance and short, medium and long-term prospects.	The Board keeps its shareholders updated in line with the JSE Listings Requirements, and ensures the integrity of external reports in so far as dealing with assurance thereof. Before the AGM, the Board engages major shareholders to address any concerns they may have.
<b>Part 5.3: Governing structures and delegation</b>	
<b>Primary role and responsibilities of the governing body</b>	
Principle 6: The governing body should serve as the focal point and custodian of corporate governance in the organisation.	The Board adheres to the requirements of King IV. The Board receives external advice as and when required or necessary, and keeps abreast of best corporate governance practices both locally and abroad, making recommendations where appropriate, for Board participation in continuing education programmes.
<b>Composition of the governing body</b>	
Principle 7: The governing body should comprise the appropriate balance of knowledge, skills, experience, diversity and independence for it to discharge its governance role and responsibilities objectively and effectively.	The Board has delegated to the Nominating and Governance Committee the nomination, election and the appointment processes having set the criteria for the selection of candidates to serve on the Board. The JSE Listings Requirements require that race diversity disclosure be made effective 1 June 2018.
<b>Committees of the governing body</b>	
Principle 8: The governing body should ensure that its arrangements for delegation within its own structures promote independent judgement, and assist with balance of power and the effective discharge of its duties.	The Board conforms to this principle. Through the Nominating and Governance Committee, the Board ensures that the structures of the Board are well resourced with a balance of skills and expertise. The subcommittees of the Board include the following: Audit Committee, Risk Committee, Nominating and Governance Committee, SET Committee, Remuneration Committee, SHSD Committee, Capital Projects Control and Review Committee and ad-hoc Investment Committee.

Principles	Principle application
<b>Committees of the governing body</b>	
<p>Principle 8: The governing body should ensure that its arrangements for delegation within its own structures promote independent judgement, and assist with balance of power and the effective discharge of its duties.</p>	<p>The Board conforms to this principle. Through the Nominating and Governance Committee, the Board ensures that the structures of the Board are well resourced with a balance of skills and expertise. The subcommittees of the Board include the following: Audit Committee, Risk Committee, Nominating and Governance Committee, SET Committee, Remuneration Committee, SHSD Committee, Capital Projects Control and Review Committee and ad-hoc Investment Committee.</p>
<b>Evaluations of the performance of the governing body</b>	
<p>Principle 9: The governing body should ensure that the evaluation of its own performance and that of its committees, its Chairperson and its individual members support continued improvement in its performance and effectiveness.</p>	<p>The Board conforms to this principle. The Board regularly monitors and appraises its own performance, those of its subcommittees and individual NEDs. The Board further evaluates the independence of its independent NEDs, which evaluation is rigorously tested in respect of the independent NEDs who have served on the Board for an aggregate term exceeding nine years. The Board has scheduled in its yearly work plan an opportunity for consideration, reflection and discussion of its performance and that of its subcommittees, its Chairperson and its members as a whole.</p>
<b>Appointment and delegation to management</b>	
<p>Principle 10: The governing body should ensure that the appointment of, and delegation to, management contribute to role clarity and the effective exercise of authority and responsibilities.</p>	<p>The Board conforms to this principle. Board authority is conferred on management through the CEO. The approval of the Board is required to the levels of the subdelegation immediately below the CEO.</p>
<b>Part 5.4 Governance functional areas</b>	
<p>Principle 11: The governing body should govern risk in a way that supports the organisation in setting and achieving its strategic objectives.</p>	<p>The Board conforms to this principle. The Board has delegated this authority to the Risk Committee, who has oversight of the integrity and effectiveness of the risk management processes. A comprehensive strategic and operational risk management process is in place throughout the Group.</p>
<b>Technology and information governance</b>	
<p>Principle 12: The governing body should govern technology and information in a way that supports the organisation setting and achieving its strategic objectives.</p>	<p>The Board conforms to this principle. The Board has delegated this authority to the Audit Committee who, together with the Risk Committee, ensures that an IT framework is in place and that the IT Charter and policies are established and implemented. A detailed information, communication and technology (ICT) risk assessment is performed on a yearly basis across the Group, with key strategic risk themes highlighted in the risk enterprise register.</p>
<b>Compliance governance</b>	
<p>Principle 13: The governing body should govern compliance with applicable laws and adopted, non-binding rules, codes and standards in a way that supports the organisation being ethical and a good corporate citizen.</p>	<p>The Board conforms to this principle. The Board has delegated this authority to the Audit Committee. The Board approves policies that articulate and give effect to its direction on compliance. The following policies apply: anti-bribery and corruption governance framework, and management guidelines in relation to the Group governance and compliance framework and portal.</p>
<b>Remuneration governance</b>	
<p>Principle 14: The governing body should ensure that the organisation remunerates fairly, responsibly and transparently so as to promote the achievement of strategic objectives and positive outcomes in the short, medium and long term.</p>	<p>The Board conforms to this principle. The Board has delegated this authority to the Remuneration Committee. The Remuneration Committee assists the Board in overseeing all aspects of remuneration practices for the Group to ensure employees are remunerated fairly, responsibly and transparently. Fair and competitive reward processes are embedded in the organisation. These processes encourage and result in the achievement of the Group's strategic objectives and positive outcomes in the short, medium and long term.</p>
<b>Assurance</b>	
<p>Principle 15: The governing body should ensure that assurance services and functions enable an effective control environment, and that these support the integrity of information for internal decision-making and of the organisation's external reports.</p>	<p>The Board conforms to this principle. The combined assurance guideline for the Group provides an analysis of all the assurance activities within the Group. The Board, executive management and senior management identify additional areas that may require assurance on an ongoing basis.</p>
<b>Stakeholders</b>	
<p>Principle 16: In the execution of its governance roles and responsibilities, the governing body should adopt a stakeholder-inclusive approach that balances the needs, interests and expectations of material stakeholders in the best interests of the organisation over time.</p>	<p>The Board conforms to this principle. A stakeholder relationship and engagement policy statement has been aligned with King IV and approved by the Board. The policy was revised to be inclusive of business-wide stakeholders that are material and not just those relevant to sustainable development, particularly employees and shareholders.</p> <p>The governance framework addresses relationships within the Group's companies and shareholder relationships.</p>

## CORPORATE GOVERNANCE REPORT continued

### Application of section 3.84 of the JSE Listings Requirements on Board governance processes

Requirement	Principle	Gold Fields' approach and compliance
<b>3.84(a)</b>	There must be a policy evidencing a clear balance of power and authority at Board of Directors' level to ensure that no one director has unfettered powers of decision-making.	The Board Charter shows that there is clear balance of power and authority at Board level and that no one director has unfettered powers.
<b>3.84(b)</b>	Issuers must have an appointed CEO and a Chairperson, and the same person must not hold these positions.  The Chairperson must either be an independent director, or the issuer must appoint a lead director in accordance with King IV.	Gold Fields' CEO and Chairperson positions are held by different people, and the Chairperson is an independent NED.
<b>3.84(c)</b>	All issuers must, in compliance with King IV, appoint an Audit Committee.  Issuers must appoint a Remuneration Committee, and issuers must appoint a Social and Ethics Committee.  The composition of such committees, a brief description of their mandate, the number of meetings held and any other relevant information must be disclosed in the annual report.	The Board appointed an Audit Committee that is chaired by an independent NED. Audit Committee members are all independent NEDs.  Gold Fields' Remuneration Committee comprises independent NEDs and has an independent Chairperson that is not the Chairperson of the Board.  Gold Fields' SET Committee is aligned with King IV and the Companies Act. The Committee comprises independent NEDs and one executive director, the majority being NEDs.  Each committee provides a brief description in the IAR of its mandate, number of meetings held in a year and any other relevant information.
<b>3.84(d)</b>	Brief CVs of each director standing for election or re-election must accompany the relevant notice of the meeting.	Brief CVs of our directors are listed on p11 – 13.
<b>3.84(e)</b>	The capacity of each director must be categorised as executive, non-executive or independent.	The CVs of our directors include information on whether a director is an independent NED or an executive director.  The composition of committees is in accordance with the requirements of the Companies Act and King IV.
<b>3.84(f)</b>	Issuers must have a full-time executive Financial Director.	Gold Fields has a full-time Financial Director.
<b>3.84(g)</b>	The Audit Committee must, on an annual basis, consider and satisfy itself of the appropriateness of the expertise and experience of the Financial Director and report same in the annual report.  The Audit Committee must ensure that the issuer has established appropriate financial reporting procedures and that those procedures are operating.	Gold Fields' Audit Committee considers and satisfies itself of the appropriateness of the expertise and experience of the Company's Financial Director on an annual basis and reports the findings to the Board.  The Audit Committee has established appropriate financial reporting procedures, which are reviewed from time to time to ensure they are operating effectively.
<b>3.84(h)</b>	The Board of Directors appoints the Company Secretary in accordance with the Companies Act and applies the recommended practices in King IV.  The Board must consider and satisfy itself, on an annual basis, on the competence, qualifications and experience of the Company Secretary.	The Company Secretary is appointed in accordance with the Companies Act.  The Board considered the Company Secretary's competence, qualifications and experience during the meeting held in August 2020, and is satisfied that she is competent and has appropriate qualifications and experience to serve as the Company Secretary.
<b>3.84(i)</b>	The Board of Directors or the Nominating Committee must have a policy on the promotion of gender diversity at Board level.  The issuer must confirm this by reporting to shareholders in its annual report on how the Board of Directors or the Nominating Committee have considered and applied the policy of gender diversity in the nomination and appointment of directors.	The Board approved a Company-wide diversity policy in November 2017.

Requirement	Principle	Gold Fields' approach and compliance
<p><b>3.84(j)</b></p>	<p>The Board of Directors or the Nominating Committee must have a policy on the promotion of race diversity at Board level.</p> <p>If applicable, the Board of Directors or the Nominating Committee must further report progress in respect thereof on agreed voluntary targets.</p>	<p>The Board approved a Company-wide diversity policy in November 2017, and progress against set targets had been considered during 2020.</p>
<p><b>3.84(k)</b></p>	<p>The Remuneration Policy and Implementation Report must be tabled every year for separate non-binding advisory votes by shareholders of the issuer at the AGM.</p> <p>The Remuneration Policy must record the measures that the Board of Directors of the issuers commits to take in the event that either the Remuneration Policy or the Implementation Report, or both, are voted against by 25% or more of the votes exercised.</p> <p>In the event that either the Remuneration Policy or the Implementation Report, or both, are voted against by shareholders exercising 25% or more of the voting rights exercised, the issuer must in its voting results announcement provide for the following:</p> <ul style="list-style-type: none"> <li>• An invitation to dissenting shareholders to engage with the issuer</li> <li>• The manner and timing of such engagement</li> </ul>	<p>The Board approved the Group Remuneration Policy to be presented at the AGM for a non-binding advisory vote.</p>

# DIRECTORS' REPORT

The directors have pleasure in submitting their report and the Annual Financial Statements (AFS) of Gold Fields and its subsidiaries (the Group) for the year ended 31 December 2020.

## PROFILE

Gold Fields is a globally diversified producer of gold and copper with nine operating mines (including our Asanko joint venture (JV)) in Australia, Ghana, Peru and South Africa, as well as one project in Chile, with total attributable gold-equivalent annual production of approximately 2.24Moz, Mineral Reserves of 52.1Moz and Mineral Resources of 1116.0Moz. Gold Fields has a primary listing on the JSE Limited (JSE), and an additional listing on the New York Stock Exchange (NYSE).

## REVIEW OF OPERATIONS

The activities of the various Gold Fields operations are detailed in our 2020 Integrated Annual Report (IAR).

## FINANCIAL RESULTS

The information on the financial position of the Group for the period ended 31 December 2020 is set out on p133 – 216 of this Annual Financial Report (AFR). The income statement for the Group shows a profit attributable to Gold Fields' shareholders of US\$723m for the year ended 31 December 2020, compared with a loss of US\$162m for the year ended 31 December 2019.

## COMPLIANCE WITH FINANCIAL REPORTING STANDARDS

The Group's AFS were prepared in accordance with the International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB), the South African Institute of Chartered Accountants (SAICA) Financial Reporting Guides as issued by the Accounting Practices Committee, Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, the JSE Listings Requirements and the South African Companies Act No 71 of 2008 (as amended) (Companies Act).

## LISTINGS

The abbreviated name under which the Company is listed on the JSE is GFIELDS, and the short code is GFI. The Company also has an additional listing on the NYSE.

At 31 December 2020, the Company had in issue, through The Bank of New York Mellon on the NYSE, 352,518,473 (31 December 2019: 416,389,794) American Depository Shares (ADS). Each ADS is equal to one ordinary share.

## DIRECTORATE

### Composition of the Board

The Board currently consists of two executive directors and eight non-executive directors (NEDs).

### Rotation of directors

Directors retiring in terms of the Company's Memorandum of Incorporation (MoI) are Cheryl Carolus, Steven Reid and Carmen Letton, all of whom are eligible and offer themselves for re-election. The following changes were made to the Board from 1 January 2021: Nick Holland retired as executive director with effect from 31 March 2021. His position is taken over by Chris Griffith, who joined Gold Fields as Chief Executive Officer (CEO) and executive director from 1 April 2021. Phuthi Mahanyele-Dabengwa stepped down as NED on 28 February 2021, while Philisiwe Sibiyi joined the Board as NED on 1 March 2021. Rick Menell resigned as Deputy Chairperson, Lead Independent Director and NED on 10 March 2021.

The Board of Directors of Gold Fields' various subsidiaries comprise some of the executive officers and one or both of the executive directors, where appropriate, as well as NEDs of the Group.

### Directors' and officers' disclosure of interests in contracts

During the period under review, no contracts were entered into in which directors and officers of the Company had an interest, and which significantly affected the business of the Group.

For the year ended 31 December 2020, the directors' beneficial interest in the issued share capital and listed share capital of the Company (see table below) was 0.32%. No one director individually exceeded 1% of the issued share capital or voting control of the Company.

<sup>2</sup> Indirect ownership – restricted shares, not grossed-up for taxes

✦ Related-party information is disclosed on p210 – 211 of the AFR.

## DIRECTORS' REPORT continued

### FINANCIAL AFFAIRS

#### Dividend policy

The Company's dividend policy is to declare an interim and final dividend of 25% – 35% of its normalised earnings. On 18 February 2021, the Company declared a final cash dividend number 93 of 320 South African cents per ordinary share (2020: 100 South African cents) to shareholders reflected in the register of the Company on 15 March 2021. This dividend was paid on 15 March 2021. The dividend resulted in a total dividend of 480 South African cents per share for the year ended 31 December 2020 (2019: 160 South African cents), with the final dividend being accounted for in 2021.

#### Borrowing powers

In terms of the provisions of section 19(1) of the Companies Act, read together with clause 4 of the Company's MoI, the borrowing powers of the Company are unlimited. As at 31 December 2020, the Company's borrowings totalled US\$1,527m, compared with total borrowings of US\$1,846m at 31 December 2019.

#### Capital expenditure

Capital expenditure (capex) for the year ended 31 December 2020 amounted to US\$584m compared with US\$613m for 2019. Estimated capex for 2021 is US\$1,175m, and is intended to be funded from internal sources and, to the extent necessary, borrowings.

### SIGNIFICANT ANNOUNCEMENTS IN 2020

#### Gold Fields included in 2020 Bloomberg Gender-Equality Index

21 January 2020

Gold Fields is one of only 325 companies globally included in the 2020 Bloomberg Gender-Equality Index (GEI). This is the second year running that Gold Fields is included in the GEI, which tracks the performance of public companies committed to supporting gender equality through policy development, representation and transparency. Across Gold Fields' global workforce, 20% of employees are women.

#### Gold Fields announces first round of measures amid Covid-19

17 March 2020

Gold Fields announces a range of measures amid the escalating Covid-19 pandemic in all its operating countries, guided by the principle of prioritising the safety and wellbeing of its people. Measures include strict adherence to country-specific regulations, government decrees and protocols, and an international travel ban for all employees.

#### Gold Fields announces shutdown of South Deep mine and curfew at Cerro Corona

24 March 2020

Gold Fields supports the measures and policies to curb the Covid-19 pandemic implemented by the countries in which it operates. The South Deep mine in South Africa is placed on care and maintenance as from 27 March 2020, with only essential services continuing. The majority of employees are sent home but continue to receive their base pay during the 21-day lockdown period. Peru imposed a 15-day curfew on 16 March 2020, with Cerro Corona continuing operations as the workforce stays in a self-contained camp on-site. Just over 700 employees run the mine during the curfew period.

#### Gold Fields' Agnew mine commissions 56MW hybrid renewable project

18 May 2020

Global energy producer EDL successfully completes the 56MW Agnew hybrid renewable project for Gold Fields' Agnew gold mine in remote Western Australia. All five wind turbines are up and running and successfully integrated into Australia's largest hybrid renewable microgrid, and the first in the country to power a mine with wind-generated electricity. In favourable weather conditions, the project delivers up to 70% of Agnew's power requirements with renewable energy.

#### Fatal accident at South Deep mine

4 June 2020

It is with deep sadness that Gold Fields announces that an employee at its South Deep mine in South Africa, Abel Magajane, a shaft timberman, succumbed from injuries sustained after falling down a reef ore-pass. He leaves behind a wife and three children.

#### Gold Fields endorses global standard on tailings management

5 August 2020

The Global Industry Standard on Tailings Management is launched by the United Nations Environment Programme, the Principles for Responsible Investment and the International Council on Mining & Metals (ICMM). As a member of the ICMM, Gold Fields helped formulate the standard, fully endorses it and will now commence with its implementation. The standard establishes the first global standard on tailings management that can be applied to existing and future tailings storage facilities.

### Gold Fields' Granny Smith mine's renewable resource

7 October 2020

Gold Fields reinforced its commitment to lower carbon operations with the completion of one of the world's largest renewable energy microgrids for the Granny Smith gold mine in Western Australia. The new hybrid power system, which has been integrated with an existing gas-fired power station, is powered by more than 20,000 solar panels and supported by a 2MW/1MWh battery system. Once fully operational, it will reduce the mine's fuel consumption by 10% – 13%.

### Gold Fields ranked top South African mining company on the 2020 Dow Jones Sustainability Index

17 November 2020

Gold Fields was again ranked as the top South African mining company on the prestigious Dow Jones Sustainability Index (DJSI) database. In the 2020 DJSI scorecard, Gold Fields is ranked fourth among the 75 mining companies assessed, and the second best global gold company. Gold Fields is also an index component of the DJSI.

### Gruyere to expand with renewable energy microgrid

8 December 2020

Gold Fields and Gold Road Resources, the JV partners at Gruyere in Australia, announce that the APA Group have been contracted to install an additional 4MW reciprocating gas-fired engine by mid-2021 and build, own and operate a 13MW solar farm and 4.4MW battery energy storage system by the end of 2021. The total cost of the expansion will be between A\$32m – A\$38m.

### Gold Fields leads in water stewardship

11 December 2020

Gold Fields has been recognised for leadership in water stewardship and reporting transparency by the CDP. The CDP placed Gold Fields on its 'A-list' for tackling water security – one of 106 high-performing companies out of the 5,800-plus that were scored. This is the first time Gold Fields has achieved an A ranking. Its ranking in previous years ranged from B to A-.

### Gold Fields appoints Chris Griffith as Chief Executive Officer-designate

21 January 2021

Gold Fields' Board announces the appointment of Chris Griffith as the CEO-designate and executive director of the Company. Chris will succeed Nick Holland on 1 April 2021. Nick, who was due to retire on 30 September 2021 after 13 years as Gold Fields' CEO, has agreed to retire six months earlier to facilitate the leadership transition. Chris, 55, was previously CEO of Anglo American Platinum.

### GOING CONCERN

The AFS were prepared using appropriate accounting policies, supported by reasonable judgements and estimates. The directors have reasonable belief that the Company and the Group have adequate resources to continue as a going concern for the foreseeable future.

### DEMATERIALISATION OF THE SHARES

Shareholders are reminded that, as a result of the clearing and settlement of trades through STRATE, the Company's share certificates are no longer good for delivery for trading. Dematerialisation of the Company's share certificates is a prerequisite when dealing in the Company's shares.

### PROPERTY

The register of property and mineral rights is available for inspection at the registered office of the Company during normal business hours.

### ENVIRONMENTAL OBLIGATIONS

The Company's total gross closure liability for environmental rehabilitation costs amounted to US\$467m at 31 December 2020 compared with US\$436m at 31 December 2019. The regional gross closure liabilities are as follows:

- Americas: US\$99m
- Australia: US\$219m
- South Africa: US\$44m
- West Africa: US\$104m

The funding methods used by each region to make provision for the mine closure cost estimates are:

- Americas - bank guarantees
- Australia - self-funding, using existing cash resources
- South Africa - contributions into environmental trust funds and guarantees
- West Africa - reclamation security agreement bonds underwritten by banks and restricted cash

## **DIRECTORS' REPORT** continued

### **CONTINGENT LIABILITIES AND LITIGATION**

A material Group Litigation Report is presented at each Audit Committee meeting for discussion and consideration on whether the matter remains contingent or whether a provision has to be recognised. Details of Gold Fields' contingent liabilities and litigation matters can be found in note 35 to the AFS, p193 – 194.

### **ADMINISTRATION**

Taryn Harmse, Executive Vice President (EVP): Group Legal and Compliance, held the position of interim Company Secretary from 1 July 2019 to 31 May 2020. Anré Weststrate was appointed Company Secretary, effective 1 June 2020.

Computershare Investor Services Proprietary Limited is the Company's South African transfer secretaries and Link Asset Services is the registrars of the Company in the United Kingdom (UK).

### **AUDITORS**

The Audit Committee has recommended to the Board that PwC be appointed as the external auditors of the Company, until the conclusion of the next Annual General Meeting (AGM), in accordance with section 90(1) of the Companies Act.

### **SUBSIDIARY COMPANIES**

Details of major subsidiary companies in which the Company has a direct or indirect interest are set out on p215 – 216.

# AUDIT COMMITTEE REPORT

for the year ended 31 December 2020

The members of Gold Fields' Audit Committee (the Committee) were appointed by our shareholders at the Annual General Meeting (AGM) in August 2020. Yunus Suleman was reappointed as Chairperson of the Committee on the same day. No new members were appointed to the Committee subsequent to the 2020 AGM. The Committee members are all independent non-executive directors (NEDs).

Details of the number of meetings held during the year, as well as the attendance thereof by Committee members, are on p6 of this Annual Financial Report (AFR). Gold Fields' Board continues to believe that, as a collective, the Committee members have the necessary skills to carry out their duties effectively and with due care.

The Committee has certain reporting responsibilities to both the shareholders and the Board and is accountable to them. Its duties, as set out in the Committee Charter, are reviewed annually and incorporate the Committee's statutory obligations as set out in the South African Companies Act No 71 of 2008 (as amended) (Companies Act) and King IV Report on Governance Principles for South Africa, 2016 (King IV). A work plan is drawn up every year, encompassing all these duties, and progress is monitored continually to ensure that these obligations are fulfilled by the Committee.

Among other things, the Committee monitors and reviews:

- The preparation of the Annual Financial Statements (AFS), ensuring fair presentation and compliance with the International Financial Reporting Standards (IFRS) and the Companies Act, and recommending same to the Board for approval
- The integrity of the Integrated Annual Report (IAR), by ensuring that its content is reliable and includes all relevant operational, financial and other non-financial information, risks and other relevant factors
- Quarterly, interim and operational reports and all other widely distributed documents
- Filing of the Form 20-F with the United States (US) Securities and Exchange Commission (SEC)
- Accounting policies of the Group and proposed revisions, and significant and unusual transactions, estimates and accounting judgements
- The effectiveness of the internal control environment
- The effectiveness of both the internal and external audit functions
- The recommendation and appointment of Gold Fields' external auditors, and approves their remuneration, reviews the scope of their audit, their reports and findings, and pre-approves non-audit services in line with Company policy
- The evaluation of the performance of the Chief Financial Officer (CFO)
- The adequacy and effectiveness of the Group's enterprise-wide risk management policies, processes and mitigating strategies
- The governance of information communication technology (ICT) and the effectiveness of the Group's information systems
- The cash/debt position of the Group to determine that the going concern basis of reporting is appropriate
- The combined assurance model, and provides independent oversight of the effectiveness of the Group's assurance functions and services, with particular focus on combined assurance arrangements
- Compliance with applicable legislation, requirements of appropriate regulatory authorities and the Company's Code of Conduct
- Policies and procedures for mitigating fraud
- Approval of hedging activities as mandated by the Board
- Consideration of JSE monitoring activities reports in 2020 including:
  - Reviewed Findings of Proactive Monitoring of Financial Statements
  - Activities of the Financial Reporting Investigation Panel
  - IFRS 9/15 Thematic Report

## EXTERNAL AUDIT

The Committee is responsible for recommending the appointment or reappointment of a firm of external auditors to the Board that, in turn, will recommend the appointment to shareholders. Upon this recommendation, the Committee is responsible for determining that the designated appointee firm and audit partner have the necessary independence, experience, qualifications and skills, and that the audit fee is adequate.

An external audit fee of R46m (US\$2.7m) for 2020 was approved, as well as R1.0m (US\$0.1m) for other fees.

The Committee reviewed the annual external audit plan presented at its meeting in August 2020, including the scope, materiality levels and significant risk areas, and established that the approach would appropriately respond to organisational and regulatory changes, as well as any other applicable requirements and risks. The audit plan forms the basis of providing the Committee with the necessary assurances on risk management, the internal control environment and information technology (IT) governance. The plan was approved by the Committee.

PwC had direct access to the Committee throughout the year, and met with the Chairperson of the Committee before each meeting and, when required, on an ad-hoc basis. PwC reported to the Committee at each quarterly meeting, as well as at the year-end meeting. In addition, the Committee regularly met with PwC separately without other invitees present. The Committee is satisfied that PwC is independent of the Group.

## AUDIT COMMITTEE REPORT continued

### SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

Significant areas requiring the use of management estimates and assumptions are detailed in note 1 to the accounting policies. Management presented position papers to the Committee which detailed estimates and assumptions used, the external sources and experts consulted, and the basis on which they were applied in the calculations.

### INTERNAL AUDIT

Gold Fields Internal Audit (GFIA) is an independent department within the Company, headed by a Vice President: Internal Audit (VP: IA) who is appointed and, if necessary, dismissed by the Committee. The VP: IA reports directly to the Committee, and has direct access to the Chairperson and members of the Committee, as well as the Chairperson of the Board. The Committee Chairperson meets with the VP: IA once a quarter and on an ad-hoc basis, as required. The VP: IA also meets with the Committee, without management, at least annually and whenever deemed necessary by either the VP: IA or the Committee.

The Committee is satisfied that the resources available to GFIA, along with the skills and experience of the department, will allow the team to fulfil its mandate.

The Committee determines the purpose, authority and responsibility of GFIA in an Internal Audit Charter, which is reviewed and approved annually. The Committee assesses the performance of GFIA every year. GFIA operates in accordance with the International Standards for the Professional Practice of Internal Auditing as prescribed by the Institute of Internal Auditors. The internal audit activities carried out during the year were identified through a combination of the Gold Fields risk management framework, which includes the combined assurance framework, and the risk-based methodologies adopted by GFIA. The Committee approves the annual internal audit assurance plan presented by GFIA and monitors progress against the plan reported to the Committee each quarter.

GFIA ensured that its framework is aligned with the Committee of Sponsoring Organizations of the Treadway Commission's (COSO) 2013 internal control framework.

The Group's internal control systems are designed to provide reasonable assurance on the maintenance of proper accounting records and the reliability of financial information. It also covers operational areas, compliance with the Gold Fields Code of Conduct and the sustainability records. These systems are monitored by GFIA and its findings and recommendations are reported to the Committee and senior management.

GFIA reports deficiencies to the Committee every quarter, together with recommended remedial actions, which are then followed up to ensure the necessary action has been taken.

GFIA provided the Committee with a written assurance statement on the adequacy and effectiveness of governance, risk management and controls. No significant events occurred, nor has any been brought to GFIA's attention, to believe that governance, risk management and the control environment are inadequate or ineffective.

### INFORMATION COMMUNICATION AND TECHNOLOGY GOVERNANCE

ICT governance remains a key focus area for the Group, the responsibility of which was delegated to the Committee by the Board. The Committee also works with the Risk Committee on related ICT matters.

Gold Fields' ICT Charter defines the overall direction and governance for ICT across the Group. The VP and Group Head of ICT is responsible for executing ICT governance procedures in line with this Charter, and reports to the Committee at each meeting. The Committee reviews his report, which includes the results of all review and testing conducted by management and GFIA.

Gold Fields adopted the Control Objectives for Information Technology (COBIT) as a governance framework, and regular assessments are conducted to determine the maturity of ICT governance processes. Gold Fields' ICT at its various operations is operating at an overall maturity level of between three and four out of five, indicating that the Group's ICT governance framework and processes are established and predictable. Areas of ICT risks across the Group were defined as part of the Group's overall risk management framework, and formal policies and procedures are documented and updated regularly for these areas.

Given the nature of cybersecurity and the rising global cyber risk, cybersecurity has now become a key component of the Group's ICT governance and risk agenda. Gold Fields further enhanced its cybersecurity management controls, by achieving the ISO 27001 information security management system certification for all its mines and corporate offices.

The ICT Governance, Risk, Architecture, Standards, and Security Compliance (GRASSC) Committee is responsible for ensuring compliance and adherence to the Group's ICT policies and procedures. The ICT GRASSC Committee reviews compliance to the governance framework quarterly and recommends improvements as appropriate.

### CHIEF FINANCIAL OFFICER

The Committee evaluated the expertise and performance of the CFO, Paul Schmidt, and continues to be satisfied that he has the appropriate expertise and experience to carry out his duties as CFO of the Company and the Group, and is supported by highly qualified and competent senior staff. This conclusion is supported by input from both internal and external auditors.

### GROUP GOVERNANCE AND COMPLIANCE

The Committee is also responsible for monitoring governance and compliance for the Group – a key focus area for the Board and management as a whole.

The Group Compliance Officer has a detailed, systemic and risk-based framework in place which are overseen, managed and maintained by an online and interactive Group Governance and Compliance Portal. The framework is applied to identify all statutes, rules, codes and standards applicable to Gold Fields in all jurisdictions in which the Group operates. Updates on regulatory changes are sourced from external legal sources and internally assessed for application and impact. Changes are recorded and monitored on a monthly basis. The assessment of potential and/or actual risk exposure of non-compliance regarding the identified applicable statutes per jurisdiction, includes potential exposure to financial loss, as well as operational and reputational risks, and the adequacy of recorded controls. Mitigating controls designed to manage the risks are identified, documented and maintained proactively. GFIA carries out a review of the effectiveness (in terms of design and operating effectiveness) of the control procedures and reports on the level of compliance. The results are reported to the Committee in detailed schedules and an annual compliance index is calculated for the Group.

Also, under the ambit of risk exposure assessment, all active suppliers and contractors are screened on a monthly basis, based on an array of predefined risk criteria and adverse media exposure. A screening risk calculator is applied to those assessed entities posing a risk to Gold Fields, based on the outcome of the screening due diligence.

✦ **The Committee also ensures that Gold Fields' Code of Conduct is effective and implemented diligently throughout the Group (available on the Gold Fields website at [www.goldfields.com/code-of-conduct.php](http://www.goldfields.com/code-of-conduct.php)).**

The Committee is also responsible for ensuring that all calls to the Gold Fields tip-offs line – administered by an independent external party – are proactively dealt with. The Chairperson of the Committee, together with GFIA, are custodians of the formalised and documented investigation procedure in place and, where appropriate and necessary, will make use of external advisers and experts to investigate matters or follow up on processes. The number and nature of these calls are reported at the quarterly Committee meetings. The details of the investigations, including details on any action taken, are also reported by the Committee Chairperson to the Social, Ethics and Transformation (SET) Committee.

## RISK MANAGEMENT

The Group's Risk Committee deals with Group operational and financial risks, as well as the requisite reporting as required annually. While there is ongoing interaction between the Risk and Audit Committees, the management of financial risk remains a key focus of the Committee, management and GFIA. Gold Fields' Group and regional risk disclosures are on p40 – 47 of the IAR.

## INTERNAL CONTROL STATEMENT

In terms of the SEC's listing requirements, Gold Fields has to comply with the requirement of the Sarbanes-Oxley Act of 2002 which requires management to establish and maintain adequate internal control over financial reporting using a recognised internal controls framework.

Management is accountable to the Board for the design, implementation, monitoring and integrating of internal financial controls for the day-to-day running of the Group, focusing on the efficiency and effectiveness of operations, safeguarding the Group's assets, legal and regulatory compliance, business sustainability and reliable reporting, including financial reporting.

The Committee believes that Gold Fields' internal controls are effective, and that the financial records can be relied upon as a reasonable basis for the preparation of the AFS.

## AUDIT COMMITTEE STATEMENT

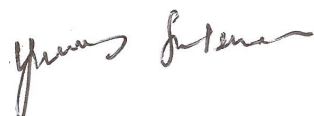

The Committee considered and discussed the AFR, including the Corporate Governance Report, and IAR with both management and the external auditors.

During this process, the Committee:

- Reviewed the Annual Financial Statements included in the AFR for consistency, fair presentation and compliance with IFRS
- Evaluated significant estimates and judgements and reporting decisions
- Reviewed the documentation supporting the going concern basis of accounting and concluded that it is appropriate
- Evaluated the material factors and risks that could impact the AFR and IAR
- Evaluated the completeness of the financial and sustainability disclosures
- Discussed the treatment of significant and unusual transactions with management and the external auditors
- Reviewed and discussed the sustainability information disclosed in the IAR and is satisfied, based on discussions, that the information is reliable

The Committee considers that the AFR and the IAR comply with the statutory requirements of the various regulations governing disclosure and reporting in all material respects, and that the AFS comply in all material respects with the Companies Act and IFRS.

The Committee recommended to the Board that the AFS included in the AFR be adopted and approved.

**Yunus Suleman**  
Chairperson: Audit Committee

31 March 2021

# REMUNERATION REPORT

## Preamble to the Remuneration Report

We present our 2020 Remuneration Report in three sections:

- Section 1: Message from the Chairperson of the Remuneration Committee (RemCo), which includes a background statement and context for 2020
- Section 2: Overview of Gold Fields' Remuneration Policy
- Section 3: Outcomes and implementation of the Remuneration Policy in 2020

Gold Fields' Board is responsible for ensuring that the Group's remuneration arrangements are fair, responsible and aligned with the long-term interests of Gold Fields and its capital providers. In doing so, it is critical that the Board remains independent of management when making decisions affecting the remuneration of our Chief Executive Officer (CEO), Chief Financial Officer (CFO), other executives and the Group's employees. With this in mind, the RemCo – as a constituted committee of the Board comprising only independent non-executive directors (NEDs) – has been delegated responsibility for overseeing the Group's remuneration activities. The qualifications and experience of our RemCo members, as well as the number of meetings held and the attendance thereof, are detailed in our full Governance Report on p6 – 13.

✦ **The RemCo Charter and terms of reference are available on [www.goldfields.com/standards-and-principles.php](http://www.goldfields.com/standards-and-principles.php).**

In summary, the role of RemCo is to oversee the Group's approach to remuneration and ensure fair, compliant, sustainable and competitive pay to support delivery of the Group's strategy. RemCo is further responsible for overseeing the implementation of remuneration to ensure consistent process delivery, aligned with the Group's Remuneration Policy. In so doing, RemCo enables the Group to access and appropriately incentivise its employees to drive value creation and support the Group's business strategy.

To ensure that it remains fully informed on developments and performance, RemCo invites the CEO and Executive Vice President (EVP): People and Organisational Effectiveness to attend meetings to provide reports and updates. These executives are not present when matters associated with their own remuneration are considered by the Committee. RemCo can draw on services from a range of external sources, including remuneration advisers.

The following table contains a summary of how our shareholders have supported remuneration policies and implementation practices over the last three years.

### Annual General Meeting (AGM) shareholder voting record on remuneration resolutions<sup>1</sup>

	2020 <sup>2</sup>	2019 <sup>3</sup>	2018 <sup>4</sup>
Remuneration Policy	91%	90%	96%
Implementation of policy	99%	91%	—%
NEDs' fees	99%	99%	98%

<sup>1</sup> The rounded percentage of "votes for" are reflected in the table

<sup>2</sup> AGM dated 17 August 2020

<sup>3</sup> AGM dated 21 May 2019

<sup>4</sup> AGM dated 22 May 2018

RemCo also oversees and manages compensation-related risks. As part of its mandate, RemCo annually, and when considered necessary, reviews risks associated with the remuneration philosophy, structure, policies and practices. RemCo is satisfied that the current executive compensation structure does not create undue risks or promote inappropriate risk-taking behaviour.

The following are key risk mitigation features of our remuneration policies and practices:

- RemCo, together with management, is actively involved in the structuring and preparation of the Remuneration Policy to ensure it aligns with the Group strategy of sustainably improving total shareholder returns (TSR)
- RemCo makes use of external experts and carries out external benchmarking, as and when required, to ensure that its Remuneration Policy is in line with best global practices, and that incentive plans are aligned with Group strategy
- Executive remuneration is disclosed annually in this Remuneration Report's Section 3: Implementation Report, and in accordance with the Remuneration Policy. Executives are not involved in any approval process relating to their own remuneration

RemCo approves the remuneration of the Executive Committee (Exco) taking into account recommendations from the CEO and independent external advisers, who have done the necessary benchmarking to ensure there is alignment with the appropriate industry peer group in the jurisdictions in which we operate.

## Section 1: Message from the RemCo Chairperson

### INTRODUCTION

Gold Fields' 2020 Remuneration Report is presented herewith on behalf of RemCo. The Board-approved RemCo Charter and its terms of reference govern the activities of RemCo, which include the release of this report, and is reviewed by the Board annually.

No annual message for 2020 can ignore the deep impact the Covid-19 pandemic has and continues to afflict across the world. While we have always prioritised safety, 2020 required additional measures to protect the safety, health and wellness of our people across all operations. Remote work, stringent hygiene protocols, the wearing of facemasks and social distancing rapidly became integrated as business-as-usual across the business.

Despite the challenges and disruptions brought on by the Covid-19 pandemic, we maintained the integrity of our operations while placing the safety, health and wellbeing of our people and communities first. We are proud of the resilience shown by everyone at Gold Fields and how our people lived the Company's values in these most-trying times.

The Covid-19 pandemic continues to challenge our lives and business in many ways. The second wave of Covid-19 infections, which started in late 2020, took a terrible toll at Gold Fields. As at 29 March 2021, 10 of our employees or contractors have passed away as a result of Covid-19.

On the safety front, we recorded one fatality during 2020 at our South Deep mine. These are all tragic losses and my deep-felt condolences go out to the family members, friends and colleagues of our team members who passed away.

### KEY OPERATIONAL AND FINANCIAL HIGHLIGHTS

Amid these challenges, Gold Fields delivered a strong set of results for 2020, including the following:

- Attributable gold-equivalent production for 2020 was 2,236koz, a 2% increase year-on-year (2019: 2,195koz)
- All-in costs (AIC) for 2020 amounted to US\$1,079/oz, marginally higher than 2019 (US\$1,064/oz). Similarly, All-in sustaining costs (AISC) for the year were US\$977/oz (2019: US\$897/oz)
- Headline earnings for 2020 increased more than four-fold to US\$729m, while normalised earnings more than doubled to US\$879m
- We declared a total dividend of R4.80/share (2019: R1.60/share)
- Mine cash-flow amounted to US\$868m in comparison with US\$552m in 2019
- Net debt decreased to US\$1,069m (2019: US\$1,664m) and the net debt:EBITDA ratio to 0.56x (2019: 1.29x)

During 2020, RemCo began the process of increasing the linkage between environmental, social and governance (ESG) issues and remuneration. While maintaining the overall framework of our Remuneration Policy and the remuneration mix for our executives, RemCo approved the principle that 25% of the performance conditions underpinning long-term incentives (LTIs) should focus on ESG metrics. This will be applicable for both equity and cash-settled LTI awards from 2021 onwards. RemCo believes it is appropriate to build on the extensive work carried out on sustainability and long-term value creation with future incentivisation through financial rewards. The 2021 awards will include performance metrics for carbon emission reductions, as well as diversity and inclusion.

RemCo met five times during 2020 – February, May, June, August and November with full attendance at all meetings – and dealt with the following items:

- Oversight of all remuneration processes for the Group, with a focus on enhancing the link between performance and reward
- Ensured strategic alignment between Group, regional and personal scorecards
- Engaged with and responded to shareholder remuneration questions and reports from proxy advisers (further details below)
- Approved a Malus Policy to complement the already-implemented Clawback Policy, and continued market evaluation and benchmarking in relation to minimum shareholding requirements, as well as anti-hedging policies for executives
- Reviewed the performance criteria for cash-settled LTI awards for non-executive employees
- Commissioned an independent benchmarking study of NED fees
- Approved the NED Supplementary Work policy
- Developed the proposed remuneration package for the incoming CEO
- Approved the Group scorecard and personal scorecards for the executives for 2021

RemCo is satisfied that it fulfilled its responsibilities in accordance with its mandate for the 2020 financial year and that the Group's Remuneration Policy achieved its

## REMUNERATION REPORT continued

stated objectives. RemCo notes that it has worked closely with management and external advisers to continue improving the Group's remuneration practices.

It believes that its work not only meets its own objectives, but also ensures the alignment of interests across Gold Fields' diverse set of stakeholders. Overall, we are satisfied that the performance-linked pay received by the Group's executives aligns with the approved framework for linking variable pay with performance.

During the year, Gold Fields' 2019 Remuneration Report was placed second by the South African Reward Association in the South African Annual Remuneration Report Awards. This award recognises companies who clearly and concisely disclose their remuneration philosophy and strategy, as well as the application thereof, to their stakeholders. The award adjudicators assessed Gold Fields' 2019 Remuneration Report through the lens of the King IV Report on Corporate Governance for South Africa, 2016 (King IV), and considered how transparency, fairness and responsible pay decisions were demonstrated. Furthermore, they focused on how remuneration detail, including fixed and variable pay, was reported.

Our report was commended for the link it demonstrated from reward to human resources (HR) and business strategy, the clear indication of what we do and do not do in terms of our remuneration practices, and for its use of graphics.

### Advisers

Khokhela Remuneration Advisers were RemCo's independent remuneration advisers during 2020 and were present at all regular committee meetings.

### Shareholder engagement

Representatives from RemCo periodically engaged with shareholders to receive their input and comments on the Group's Remuneration Policy and outcomes.

Overall, shareholders backed NEDs fees (99%), the Remuneration Policy (91%) and the implementation thereof (99%), at the AGM held on 17 August 2020. On behalf of RemCo, I would like to express my thanks to shareholders for their ongoing support and engagement.

We will continue to seek and incorporate shareholder feedback as appropriate to refine and enhance our remuneration programmes on an ongoing basis, consistent with our corporate objectives and strategy.

### Conclusion

RemCo concludes that the Company's employee remuneration policies and practices do not create undue risks or promote inappropriate risk-taking behaviour. RemCo will continue to ensure that fair, equitable and responsible remuneration processes are in place to drive the promotion and implementation of Gold Fields' strategy, thereby boosting stakeholder value creation.

**Steven Reid**

*Chairperson of RemCo*

On behalf of RemCo, which approved the report on 31 March 2021.

### Key features

- 75% of CEO's pay is at risk
- 65% of the CEO and executive team's short-term incentives (STIs) are linked to Group performance
- 100% of the CEO and executive team's LTIs consist entirely of performance shares, which measure absolute and relative TSR, free cash-flow (FCF) margin, and ESG metrics
- The CEO's minimum shareholding requirement (MSR) is two times his annual salary, while other executives' MSR is equal to their annual salary, with Clawback and Malus policies in place
- Two times annual salary as severance payments for executive directors' upon change of control and termination of employment
- 100% of RemCo are independent NEDs

### Gold Fields does not:

- Reprice underwater shares
- Pay dividends for performance shares
- Provide guaranteed bonuses
- Grant shares to NEDs
- Allow the use of unvested LTI awards as collateral, or protect the value of any unvested awards, or the value of shares and securities held as part of meeting MSR provisions
- Provide financial assistance to directors or prescribed officers

## Section 2: Remuneration Policy

Our Remuneration Policy and philosophy, which apply to the CEO and CFO (in their capacity as executive directors), and Exco members (as prescribed officers), is included in this section of our Remuneration Report. We also include related principles that are relevant across the Group.

### INTRODUCTION

One of our competitive people advantages is our strong culture. Our people are driven by passion, guided by values, and committed to stakeholder partnerships that help us succeed – on both Group and individual levels.

We have designed our remuneration structures to support this culture by stimulating and incentivising high performance. We aim to create partnerships with our people on their journey of continued growth through market-related base pay and benefits, attractive performance-driven STIs and LTIs, as well as recognition and retention programmes.

The core objective of our Remuneration Policy is to attract, retain and motivate top talent to deliver superior results. To ensure we provide remuneration that is fair, appropriate and responsible, we conduct our own internal benchmarking exercise annually and, every second year, make use of external remuneration data to confirm our objectivity in achieving this goal.

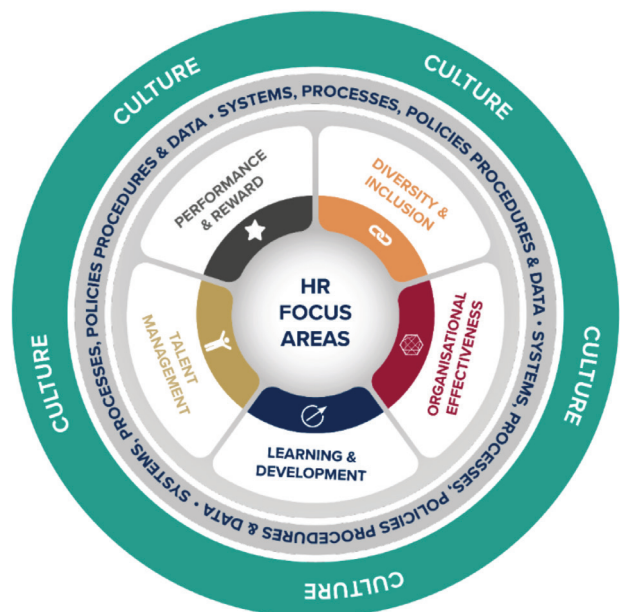

RemCo is acutely aware of the global concern around fair and responsible remuneration between management and junior level employees, as well as remuneration disparities between genders. We believe that our approach to short and long-term remuneration is substantively fair and consistently applied throughout the organisation in line with the approved design frameworks.

Gold Fields' total reward programme and policy starts with and flows from our Group strategy and values as illustrated in the 2021 Group Balanced Scorecard (BSC) on the next page. The Group's BSC process forms part of the day-to-day management of the business, the quarterly business review process and the performance management process. It is not simply an input to reward related decision-making, but fundamentally supports our delivery-based culture.

For all executive scorecards, we ensure that cascaded objectives are outcomes-focused and that targets are appropriately set, with stretch targets in place to take account of incremental reward. Each year, management and the Board establish the Group's key objectives for the year ahead to ensure the Group achieves its medium-term targets. The incentives under the Group BSC are then cascaded to executive, regional and individual scorecards.

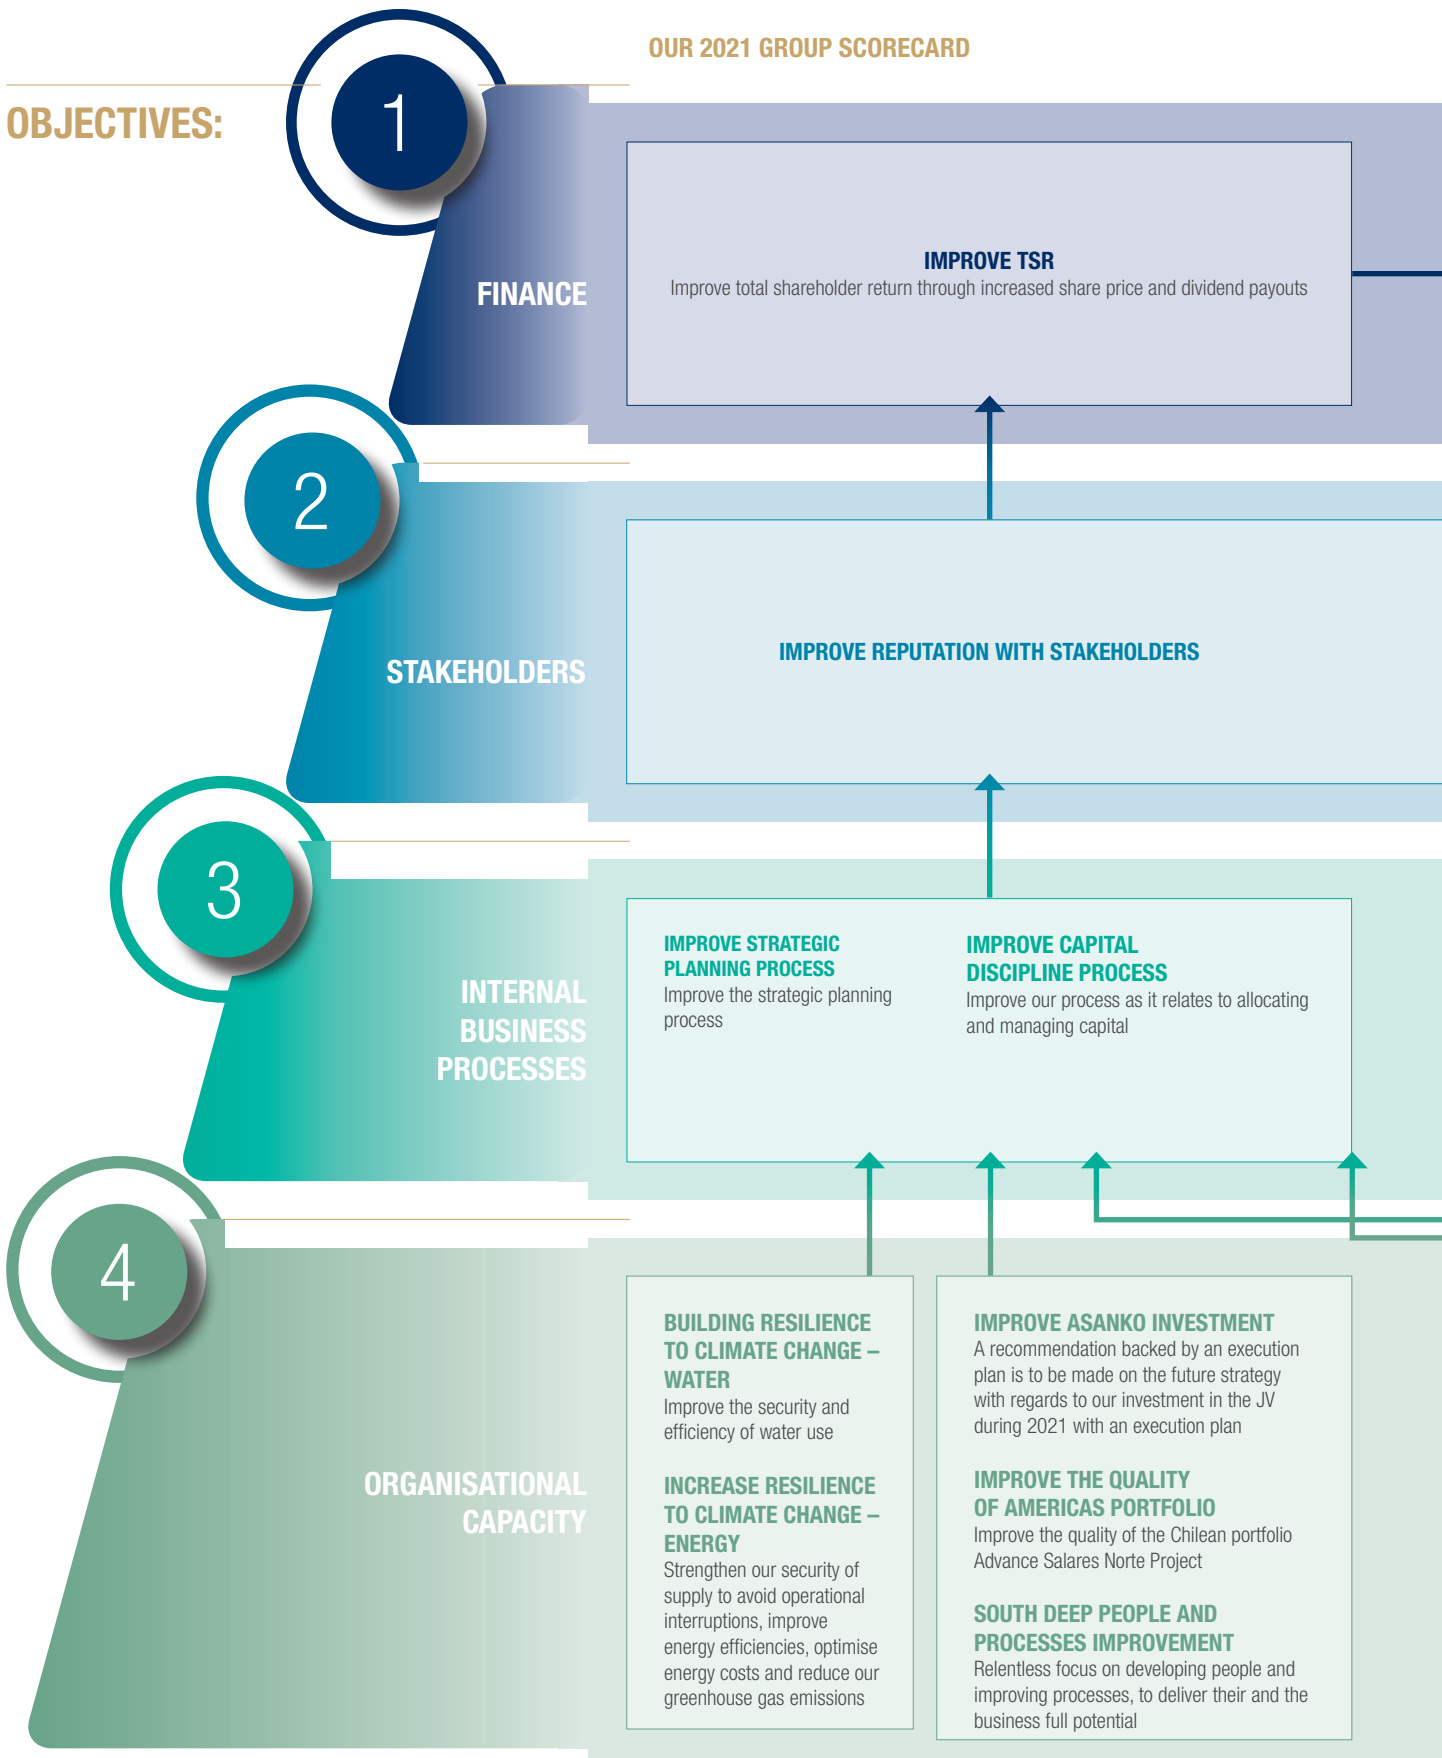

The Group's HR key focus areas are depicted in the graphic below, while the 2021 BSC goals are captured on the next page.

### Gold Fields Group HR focus areas

# REMUNERATION REPORT CONTINUED

THE INFOGRAPHIC BELOW SHOWS THE KEY OBJECTIVES UNDER OUR GROUP 2021 SCORECARD

<p><b>REDUCE DEBT</b> Reduce debt to improve TSR, reduce risk and create financial flexibility</p>	<p><b>IMPROVE FREE CASH-FLOW</b> Increase free cash-flow per ounce at a set gold price</p>	<p><b>IMPROVE CAPITAL RETURNS</b> Improve rate of return on capital invested</p>
--	--	--

Improve investor and analyst confidence, community and government reputation in Gold Fields

<p><b>IMPROVE SAFETY, HEALTH AND ENVIRONMENT AND WELLBEING</b></p> <ul style="list-style-type: none"> <li>• Eliminate fatalities, serious injuries and environmental incidents in our business and remove people from risk</li> <li>• Improve the health and wellbeing of our workforce</li> </ul>	<p><b>IMPROVE ORGANISATIONAL CULTURE</b> Improve engagement levels of employees</p>	<p><b>IMPROVE TAILINGS FACILITY MANAGEMENT</b> Further reduce dam safety risks and commence with implementation of the Global Industry Standard on Tailings Management (GISTM)</p>
--	---	--

**IMPROVE INNOVATION AND TECHNOLOGY**  
Improve operational health and safety, business processes, efficiencies of operations and productivity through the implementation of innovation and technology initiatives, based on the Gold Fields modernisation (I&T) road map

**IMPROVE PEOPLE CAPACITY**  
Deliver the people scorecard as per plan

**IMPROVE FEMALE REPRESENTATION**  
Increase the number of women in the workplace

**IMPROVE GOVERNANCE AND COMPLIANCE**  
Improve adherence to all required legislation, regulations, standards, policies agreements and procedures

**Lag indicators:** Performance indicators showing how successful we've been in achieving outcomes

**Lead indicators:** indicators of performance that drive outcomes/future success

# REMUNERATION REPORT CONTINUED

The incentives under the Group BSC are then cascaded to executive, regional and individual scorecards.

## REMUNERATION FRAMEWORK

Gold Fields is committed to ensuring fair, equitable, sustainable and responsible remuneration practices. We believe in compensating our people in relation to sustained value creation, delivered consistently, in a fair and transparent manner. Our values, ethics and beliefs underpin this philosophy, which aims to attract, retain and motivate top talent.

Gold Fields' Remuneration Policy drives and incentivises the achievement of Gold Fields' strategy, and continuously supports the creation of shareholder value by aligning performance with commensurate levels of reward. In this way, there is stakeholder interest alignment. The principles of King IV guide the fair and responsible application of the Remuneration Policy across all operations. In addition, compliance with all relevant laws and regulations in the various jurisdictions in which we operate is non-negotiable

and strictly enforced. A key design principle of the Remuneration Policy is to ensure a clear link between the Gold Fields strategy and our employees' work-related efforts.

## PAY FOR PERFORMANCE

Our remuneration practices are competitive in the jurisdictions in which we operate, balanced with our pay-for-performance philosophy and overall strategy to sustainably maximise TSR.

Our annual benchmarking efforts reflect this and translate to comparisons at the market median of our comparator peer group. Final pay decisions consider benchmarking results in combination with performance, affordability and economic conditions.

These confirm degree of alignment of the target pay mix with that of local and international mining peers with a comparative market capitalisation and provide information to RemCo in assessing Gold Fields' executive remuneration levels.

## GOLD FIELDS OVERALL REMUNERATION CONCEPT

	FIXED		VARIABLE													
COMPONENTS	CASH		EQUITY													
	GUARANTEED REMUNERATION	SHORT-TERM INCENTIVE PLAN (STIP)	LONG-TERM INCENTIVE PLAN (LTIP)

<sup>1</sup> Modified by personal performance rating

<sup>2</sup> RemCo approved the inclusion of ESG metrics in 2020 for the 2021, 2022 and 2023 performance periods

## Key reward components of the Remuneration Policy

### Remuneration Policy

Guaranteed remuneration package (GRP), or base rate of pay (BRP)		Variable pay STIs and LTIs designed to align performance with strategy and value creation		
Base pay	Benefits	STIs	LTIs	MSR
Market-related salaries, dependent on performance, roles and responsibilities	Market-related benefits guided by local legislation and internal policies	Performance-based Group annual incentive scheme	Longer-term plans that instil a sense of ownership and strategic alignment - Share plans - Cash-settled plan <sup>1</sup>	Encourages executives to hold shares in Gold Fields, in line with best practice

<sup>1</sup> Not applicable to executives

Gold Fields' Employee Value Proposition (EVP) balances financial rewards with non-financial rewards to drive the desired levels of performance. The financial reward component of our EVP includes:

- GRP or BRP, being the total of base pay, allowances and benefits
- Variable pay, which includes STI, LTI and MSR

### Guaranteed remuneration package

#### Base pay (either GRP/BRP)

Objective and link to strategy	Operation	Policy and practice	Performance measures
A competitive salary provided to executives to ensure that their experience, contribution and appropriate market comparisons are fairly reflected. It also allows us to attract and retain the skills required to deliver on our strategic goals.	Base pay for all employees is reviewed annually after considering benchmarks against comparator groups, Group performance, economic circumstances, affordability, individual performance, changes in responsibility and inflation levels. Changes are effective from 1 March each year.  The CEO makes recommendations on Exco base pay - excluding his own base salary - to RemCo for approval by the Board.	We seek close alignment between executive salary increases and increases for all non-bargaining unit employees, where practical. This is informed by inflation, which can be matched directly or set above/below changes in the consumer price index (CPI). The guaranteed pay benchmark is the market median.	Both Group and individual performances in line with the BSC inform the individual base salary review. This is in addition to economic circumstances, affordability, changes in job responsibility and alignment across employee groups.

### Benefits and allowances

#### Benefits and allowances

Objective and link to strategy	Operation	Policy and practice	Performance measures
Provided to ensure local market competitiveness benefits are provided based on affordability to both the employees and the Group.	Based on local market trends and can include items such as group life insurance, disability and accidental death insurance. Our Expatriate Policy provides that special allowances may be made for expatriate employees in respect of, among others, relocation costs, cost of living, and the cost of education for children and their families.	In line with approved policy, the provision of benefits complies with legislation across the jurisdictions in which we operate. Benchmarking ensures that there are competitive benefits aimed at attracting and retaining key employees.	Not applicable.

# REMUNERATION REPORT continued

## Remuneration scenarios at different levels of performance<sup>1</sup>

### CHIEF EXECUTIVE OFFICER US\$'000

### CHIEF FINANCIAL OFFICER US\$'000

### AVERAGE EXECUTIVE COMMITTEE US\$'000

<sup>1</sup> For theoretical purposes of displaying the pay policy remuneration mix. Assumes LTI award at target levels. "Below" assumes no annual LTI; "On-target" assumes 100% vesting; "Stretch" assumes 200% vesting

## SHORT-TERM INCENTIVES

Our STI is a performance-based Group annual incentive scheme that supports value creation and motivates our people to achieve success for the Group.

## Remuneration mix

- Gold Fields' total reward model links financial reward to a combination of job type and performance, therefore the mix of GRP and variable pay differs according to level of performance and the grade of the job held. To entrench a high-performance culture, and in line with international best practice, the more senior the role, the higher the proportion of variable pay (at-risk pay) and the greater the focus on longer-term performance in the remuneration package. Pay-at-risk comprises 75% of our CEO's total reward of which 38% is long-term incentives
- For exceptional performance, the Group aims to position overall remuneration, including STIs and LTIs, at the 75<sup>th</sup> percentile of our comparator market. This aligns with our total reward strategy of ensuring a market-competitive reward mix, rewarding employees for exceptional performance, and the retention of high-performing employees. RemCo retains the discretion to determine whether, and to what extent, specific performance levels warrant total pay at the 75<sup>th</sup> percentile
- The adjacent graphs illustrate different scenarios of performance achievement of the total remuneration for the CEO, CFO and Exco members, on a single total figure basis, based on the 2020 Remuneration Policy

All Group executives, regional executives and management-level employees (Paterson D-band and above categories) are eligible to participate in the STI, subject to the achievement of applicable performance conditions.

Category	Individual	Company performance conditions (bonus parameters)		
		Group	Region	Operation
		– Safety (20%) – Gold production (20%) – AIC (40%) – Development and waste stripping (20%)		
		Individual performance (BSC) – Linked to team/department strategy		
CEO	35%	65%	0%	0%
CFO	35%	65%	0%	0%
Group executive	35%	65%	0%	0%
Regional executive	35%	20%	45%	0%
General manager	35%	0%	20%	45%
Regional office	35%	0%	65%	0%
Mines	35%	0%	0%	65%

- Target performance for bonus parameters links to the annual business plan approved by the Board
- Operational objectives for each mine are measured against plans approved by RemCo and comprise safety, production, costs and physical mine development (ore and waste) goals
- The operational objectives form the basis of the regional objectives and subsequently feed into the Group objectives
- If individual, operational, regional or Group objectives do not exceed threshold targets, no bonus is payable
- Based on the above, RemCo approves annual payments of STI in February of every year
- Where applicable, production bonuses are paid to employees at mine level
- We consider regional and on-mine schemes, for example, in Peru, we apply a statutory bonus scheme in compliance with legislation, and pay the difference between a higher calculated STI and legislated bonus, if applicable
- Threshold, on-target and stretch bonus amounts expressed as a percentage of GRP (or BRP) are as below:

Job grade	Bonus target incentive as % of GRP		
	Threshold	On-target	Stretch
CEO	0%	65%	130%
CFO	0%	60%	120%
EVP	0%	55%	110%

- Achievement falling between threshold and on-target and stretch is calculated on a straight-line basis between the two reference points
- In advance of the STI outcome, executives may elect to defer some or all of their STI by converting a portion of their cash into shares towards their MSR-related commitments

## GROUP PERFORMANCE MEASURES

This is made up of the following bonus parameters:

- Safety (20%)  
The safety performance measure comprises a mix of leading and lagging indicators listed below.  
  
In addition, a fatal accident acts as a negative modifier; a fatality results in a forfeiture of the entire safety element (20%) for bonus purposes for the operation, region and corporate office participants.
- Serious injuries
- Safety engagement rate (SER)
- Near-miss reporting
- Timely close-out of corrective actions on serious potential injuries
- Gold production (20%)
- All-in-cost (40%)
- Development and waste stripping (20%)

## INDIVIDUAL PERFORMANCE MEASURES

We continued our journey to align performance management processes with our Group strategy. This included the addition of a balance between leading and lagging indicators into all scorecards and ensuring that we set appropriate stretch targets for all management-level employees. While this new approach builds on our previous BSC process, it also ensures a stronger alignment between our strategy and scorecards. This ensures that our strategy is cascaded into measurable objectives that we track through our performance management process.

The chart below shows how performance rating scores on the five-point scale translate to percentages used for bonus calculation purposes. A score of up to 2 results in 0%, and a score between 4.7 and the maximum of 5 results in the capped achievement of 200%.

**PERSONAL PERFORMANCE RATING CORRELATION TO PERCENTAGE ACHIEVEMENT (%)**

## REMUNERATION REPORT continued

### LONG-TERM INCENTIVES

#### Gold Fields' Amended 2012 Share Plan

Gold Fields' Amended 2012 Share Plan (Share Plan) is a conditional share plan that provides for annual awards of performance shares, which vest after three years subject to performance conditions. Participants receive shares under the Share Plan to instil a sense of ownership among executives, therefore enabling:

- Alignment of executive rewards with shareholder interests
- Retention of key people
- Alignment of people costs with business results

The participants in the Share Plan are:

- Exco members: 100% of LTI participation through the Share Plan
- Regional Exco members: 30% of LTI awards through the Share Plan and 70% through the cash-settled LTIP (p37)

Other employees who are eligible for LTI awards receive 100% of their LTIs through the cash-settled LTIP.

By only awarding shares to Group and regional executives, Gold Fields ensures the future sustainability of the share scheme by limiting the issuance of shares under the plan and appropriately aligning LTI. The use of Company shares also aligns executive management interests with those of shareholders.

Performance share awards are determined by job grade, performance and guaranteed remuneration. The award profile is set out below, expressed as a percentage of an individual's GRP or BRP as applicable:

Individual performance rating	1.0 to 2.7: 0%	2.8 to 3.2: 50%	3.3 to 3.7: 100%	3.8 to 4.2: 150%	4.3 to 5: 200%
CEO	—	52	104	156	208
CFO	—	48	96	144	192
Exco	—	44	88	132	176
Regional Exco <sup>1</sup>	—	9 - 10	18	27 - 30	36 - 40

<sup>1</sup> This represents 30% of their LTI participation, as 70% of their LTI is under the cash-settled LTIP

These awards in monetary value are used to calculate an equivalent number of shares based on the three-day volume weighted average price (VWAP) preceding 1 March annually. The vesting of these shares is subject to the following performance conditions:

Performance condition	Weighting	Threshold (0% vesting)	Target (100% vesting)	Stretch (200% vesting)
Absolute TSR	33%	N/A – no vesting below target	The US Dollar (nominal) cost of equity <sup>1</sup> over the three-year performance period	US Dollar cost of equity + 6% over the three-year performance period
Relative TSR	33%	Below median of the peer group <sup>2</sup>	Median of the peer group	Upper quartile of the peer group
FCF margin	34%	Average FCF margin over the three-year performance period of 5% at a gold price of US\$1,300/oz	Average FCF margin over the three-year performance period of 15% at a gold price of US\$1,300/oz	Average FCF margin over the three-year performance period of 20% at a gold price of US\$1,300/oz

<sup>1</sup> Cost of equity is validated by an external consultant

<sup>2</sup> For the 2020 awards, the peer group consisted of AngloGold Ashanti, Barrick, Eldorado Gold, Yamana, Agnico Eagle, Kinross, Newmont, Newcrest, Northern Star and Endeavour

- Vesting occurs after three years from award and is dependent on the extent to which the Group has met the above performance conditions over the three-year period. Vesting is capped at 200% of the award
- In advance of the vesting date, executives also have the option to elect to defer some or all of their vested share awards towards the achievement of their MSR
- Linear interpolation is applied between threshold and target and target to stretch performance

### Cash-settled long-term incentives

The cash-settled long-term incentive plan (LTIP) ensures alignment between regional contributions and the Group's long-term business strategy. The use of cash as opposed to shares also reduces the number of shares required, while still ensuring a longer-term focus for participants.

During 2020, a comprehensive review of the LTIP awards was carried out. As a result, RemCo determined that cash-settled LTIP awards made in 2018 and 2019 would use the final year regional scorecard ratings (2020 and 2021 respectively) as performance criteria on vesting of these awards. Cash-settled LTIP awards made in 2020 would use the average of the three years' regional scorecard ratings (2020, 2021 and 2022) to determine the performance outcome. Executive directors or prescribed officers of the Company do not participate in this cash-settled LTIP.

The cash-settled LTIP's design links regional long-term strategic objectives with Group objectives, regional performance conditions and targets are set and agreed with RemCo through the BSC process and BSC ratings are used to determine vesting outcomes for 2018, 2019 and 2020 awards. While awards are made in March each year, and settled in March three years later, the measurement periods are from 1 January of the year of the award to 31 December of the third year of award. RemCo approves the performance conditions for each set

of awards based on management recommendations.

From 2021, RemCo supports the use of a framework that aligns performance conditions for the Share Plan and the cash-settled LTIP as follows:

- Group absolute TSR (25%)
- Group relative TSR (25%)
- Group FCF margin (25%)
- ESG (25%), measured at Group level for Share Plan and corporate participants in the cash-settled LTIP, and at regional level for regional participants in the cash-settled LTIP

### OTHER KEY FEATURES OF OUR REMUNERATION POLICY

#### Executive minimum shareholding requirements

Alignment between executives and shareholders' interests is critical to sustained value creation. As such, we encourage executives to hold shares in Gold Fields in line with international and South African best practice.

Our MSR Policy, which was implemented in 2017, requires that Exco members hold shares in Gold Fields equivalent to multiples of their GRP as follows:

- CEO: 200% by 31 December 2020, however, this will be increased to 300% with effect from April 2021
- All other members of Exco: 100% within five years of date of entry

RemCo makes an award of matching shares at a ratio of 1:3 (one share for every three committed towards the MSR, capped at the matching share limit). The value of the ultimate number of matching shares that will vest is limited to 67% of GRP in the case of the CEO, and 33% of GRP or BRP for the other executives. The matching shares vest at the end of the five-year period if the participant remains in the employment of the Group and has retained the committed shares.

## REMUNERATION REPORT continued

### Retention and sign-on bonuses

RemCo has the discretion to approve management-proposed sign-on payments and/or retention payments to recruit and/or retain individuals at certain levels for specific business reasons. Below these levels, management has the discretion to approve such payments. The typical minimum work-back period for retention payments is two years. No such payments were made to executives during 2020.

### Malus and clawback

The Board is entitled to seek repayment of remuneration amounts that were made in error and subsequently restated. The policy gives RemCo the right to recover all forms of remuneration from executives. This is applicable, but not limited to: remuneration relating to base pay, the achievement of financial or performance goals or similar conditions for any award, or payment under the annual incentive plan or LTIP, or any bonus payment, whether vesting is based on the achievement of performance conditions, the passage of time, or both.

The right of recovery may be exercised within three years from the restatement date and the policy sets out the procedures to be followed depending on whether the remuneration has been paid, transferred or otherwise made available to the executive, as well as the steps to take if the amount is not immediately recoverable.

Our Malus Policy, approved during 2020, will permit the Board to withhold yet-to-be awarded remuneration in the event of certain trigger events.

### Executive Committee service contracts and termination provisions

Gold Fields can terminate an executive's employment summarily for any reason recognised by law in the respective jurisdictions.

The general principles governing the settlement of employment benefits and rewards is that employees who resign voluntarily or are dismissed for disciplinary reasons forfeit all unvested benefits and awards. Employees who separate from the Group for reasons of death, disability, retirement or redundancy for operational reasons, retain a portion of unvested benefits and awards. This portion is based on the principles of time (pro-rata) and performance testing at on-target levels and in line with the principles of King IV.

Executive directors have employment agreements in place with Gold Fields Group Services (Pty) Ltd (GFGS), Gold Fields Ghana Holdings BVI Limited (GF Ghana) and Gold Fields Orogen BVI Limited (Orogen). The EVP: Strategy, Planning and Group Development also has employment agreements with GFGS and Orogen.

In terms of the South African employment contracts with Group Exco, employment continues until terminated upon notice by either party or retirement age, which is currently 63 years. Orogen and GF Ghana have substantially similar terms.

The notice period is 24 months for the CEO, 12 months for the CFO and six months for other Group Exco members.

### Change of control provisions for CEO, CFO and EVP: Sustainable Development

In 2012, RemCo resolved to discontinue the remuneration entitlement in the event of a change of control for senior executives appointed after 1 January 2013. Senior executives appointed before this date are entitled to the change of control remuneration benefits and retained their rights under the previous policy. Therefore, the only members of the executive with a change of control provisions are the CEO, CFO and EVP: Sustainable Development.

A change of control is defined as a third party or concert parties holding 30% or more of Gold Fields' ordinary shares. In the event of the finalisation of an acquisition, merger, consolidation, scheme of arrangement or other reorganisation, whether or not there is a change of control and if the executive directors' services are terminated, the change of control provisions also apply. For these employees, their employment contracts provide that, in the event of their employment being terminated within 12 months of the change of control, the executive is entitled to:

- Payment of an amount equal to two-and-a-half times annual GRP in the case of the CEO, and two times the annual GRP in the case of the CFO and the EVP: Sustainable Development, plus an amount equal to the average of the incentive bonuses paid during the previous two completed financial years.
- A bonus payment in respect of the year in which termination occurs, determined on the basis of the bonus targets being deemed to have been achieved
- Full vesting of all LTI awards

Their employment contracts also provide that these payments cover any compensation or damages the executive directors may have under applicable employment legislation.

### Share Plan

The Share Plan provides for pro-rata vesting of LTI awards in the event of a change of control.

A change of control as defined for the purpose of Share Plan includes (in summary) an acquirer obtaining: (i) ownership or voting control of 50% of the Company's issued share capital; (ii) the right to control the management of the Company or the composition of the board; or (iii) the approval by the Company's shareholders of, or the consummation of, a merger or consolidation of the Company with another business entity.

The treatment of LTI awards on a change of control is subject to any pre-existing employment conditions, which take precedence in the event of a conflict.

### NON-BINDING ADVISORY VOTE – REMUNERATION POLICY

As set out in King IV, shareholders are required to cast non-binding advisory votes on the Remuneration Policy and Implementation Report at Gold Fields' AGM on 6 May 2021.

Should there be a 25% or higher vote against either of the above, we will engage with shareholders to understand the drivers of the dissenting votes, and to discuss potential remedial measures.

## NON-EXECUTIVE DIRECTORS

### Non-executive directors' Remuneration Policy

NEDs are not eligible to receive any STIs or LTIs. Gold Fields pays NEDs based solely on their role within the Board and/or committees, with differentiation only between international directors and those based in South Africa. We apply the policy using the following principles:

- Payment of a Board fee for the Board meetings attended during the year
- Board committee members receive annual committee fees for participation
- The Chairperson and Deputy Chairperson receive all-inclusive annual fees for all Board and committee participation
- We review fees annually and implement any increases in June of each year
- Travel expenses are paid to NEDs for travel for site visits and Board meetings

### Non-executive directors' fee review

We intend to seek approval for increases to be applied to the prevailing fees of NEDs, effective from 1 June 2021, of 3.4% for Rand-based fees and of 1.4% for US Dollar-based fees.

The following fixed annual fees shall be payable to NED's with effect from 1 June 2021 (excluding value-added tax (VAT)) if approved by shareholders at the AGM on 6 May 2021.

NEDs' fees				
Per annum unless specified	Approved 2020/2021 fees in Rand	Proposed 2021/2022 fees in Rand	Approved 2020/2021 fees in US\$	Proposed 2021/2022 fees in US\$
The Chairperson of the Board (all-inclusive fee)	3,244,800	3,355,123		
The Deputy Chairperson of the Board (all-inclusive fee) <sup>1</sup>	2,112,240	2,184,056		
The Chairperson of the Audit Committee	386,880	400,034		
The Chairpersons of the Capital Projects, Control and Review Committee, Nominating and Governance Committee, RemCo, Risk Committee, Social, Ethics and Transformation (SET) Committee and SHSD Committee (excluding the Chairperson and Deputy Chairperson of the Board)	238,118	246,214	18,383	18,640
Members of the Board (excluding the Chairperson and Deputy Chairperson of the Board)	1,065,043	1,101,254	82,468	83,623
Members of the Audit Committee (excluding the Chairperson of the Audit Committee and the Deputy Chairperson of the Board)	199,555	206,340	15,488	15,705
Members of the Capital Projects, Control and Review Committee, Nominating and Governance Committee, RemCo, Risk Committee, SET Committee and SHSD Committee (excluding the Chairpersons of the relevant committees, Chairperson and Deputy Chairperson of the Board)	150,259	155,368	11,756	11,921
Chairperson of an ad-hoc committee (per meeting)	60,320	62,371	4,607	4,671
Member of an ad-hoc committee (per meeting)	37,440	38,713	2,948	2,989

<sup>1</sup> The Deputy Chairperson is also the Group's lead independent director and assumes the role of Chairperson when the Chairperson is not able to act, unavailable or if she has to recuse herself when her independence may be compromised. This fee is all-inclusive and covers the Deputy Chairperson's membership of six subcommittees, in addition to his Board membership

## REMUNERATION REPORT continued

### Section 3: Implementation Report

This section of the Remuneration Report explains the implementation of our Remuneration Policy by providing details of the remuneration paid to executives and NEDs for the financial year ended 31 December 2020.

Our STIP and LTIP targets comprise objectives that are deliberately and rigorously evaluated and selected based on their importance to the Company's success. Therefore, in a year dominated by the Covid-19 pandemic, we elected not to modify or eliminate any of our chosen objectives. Instead, we requested that our people place an overarching priority on their safety and those of our neighbouring communities, and to maintain the integrity and long-term value of our operations and assets. As described elsewhere in this report, our people diligently responded to these additional priorities, and achieved a strong annual performance with improved results from those of 2019.

#### Guaranteed remuneration package

##### Guaranteed pay (GRP and BRP) adjustments

Key facts	Policy application
<ul style="list-style-type: none"> <li>All eligible employees received a salary increase on 1 March 2019. The average increase for executives during 2020 was 4.7%</li> <li>The overall increase in employment costs during 2020 was within the approved mandate of RemCo</li> <li>Executive packages were increased only by country-specific inflation rates for the 2020 review period</li> </ul>	<ul style="list-style-type: none"> <li>Across the Group, salary increase mandates were set at the prevailing country-specific inflation rate, with an additional percentage for internal and/or external parity, where applicable</li> <li>Salaries in Ghana are determined in US Dollar</li> <li>For South Deep, we applied an increase of 5.9%, to address retention of critical skills</li> </ul>

#### SHORT-TERM INCENTIVES

##### Key facts

- Bonus parameters for 2020 were approved as detailed in Section 2 and the introduction to Section 3
- The total 2020 annual incentive award payment amounted to US\$27m (2019: US\$24m), with 656 (2019: 558) eligible employees participating
- The incentive is based on an average individual performance rating of 3.8 (2019: 3.6) out of a maximum of 5.0 against performance measures set at the beginning of the year

##### Policy application

- Incentive bonus parameters and targets are agreed and approved at the beginning of each cycle
- Bonus parameter performance achievement is peer reviewed internally and by independent external advisers prior to approval and payment
- There is calibration between individual performance ratings and Group or Company performance as applicable
- Regional incentives are aligned with operation and regional performance achievements
- Adjustments were made to 2020 outcomes as described in the introduction to Section 3
- Operational objectives form the basis of the regional objectives and subsequently feed into Group objectives
- Actual performance achievement is confirmed by the Group's external auditors
- Performance calculations are formulaic, however, RemCo does have the discretion to adjust the outcome deemed appropriate

Against the backdrop of a strong performance in 2020, and by assessing the results of the Group against our annual objectives, RemCo and the Board believed that the outcome of two of our operations was unfair. South Deep in South Africa and Cerro Corona in Peru were impacted by government-mandated shutdowns, and therefore fell short of their production targets. Both operations are located in countries which were heavily impacted by the pandemic, and with vulnerable populations in close proximity to the mines. RemCo considered:

- South Deep's continued multi-year improvement process, and its focus on and achievement of positive cash-flow
- The fairness and equity aspect of having continually paid our hourly workforce throughout the shutdown periods
- The operations' outstanding results in maintaining the safety of our people and communities
- South Deep's ability to maintain underground development rates above that required for long-term development of the mine

Consequently, RemCo modified the evaluation system for both South Deep and Cerro Corona by eliminating the quarters which were heavily impacted by the mandated shutdowns from the calculation of their performance. South Deep and Cerro Corona represent 20% of the Company's annual production. The resultant performance achievement for the Group was assessed by using the actual production-weighted average of each regional outcome on a gold-equivalent basis. This resulted in the Group outcome of 95% for STIP purposes.

As a reasonableness check RemCo also noted the following resultant outcomes:

### Comparable regional outcomes for 2020

	Percentage achievement of target
Americas	79%
South Deep	86%
West Africa	94%
Australia	102%

### Comparable prior year Group results

	Percentage achievement of target
2016	198%
2017	130%
2018	71%
2019	92%
2020	95%

The remaining 80% of the Company performance was not adjusted in any way.

No changes were made to any components of the LTIPs because of the pandemic.

Average exchange rates of US\$1: R16.38 (2019: R14.46) and A\$1: R11.29 (2019: R10.05) were applied for calculation purposes in this section.

### Group objectives

For the year ended 31 December 2020, the Group performance was 95%, with targets and achievements below:

Region	2020 production in koz	Weight	Achievement	Weighted achievement
West Africa	862	36%	94%	35%
Australia	1,016	44%		
Americas	228	10%	79% <sup>1</sup>	8%
South Deep	226	10%	86% <sup>2</sup>	8%
<b>Group</b>	<b>2,334</b>	<b>100%</b>		<b>95%<sup>3</sup></b>

<sup>1</sup> Modified the evaluation system for Cerro Corona by eliminating the quarters which were heavily impacted by the mandated shutdowns from the calculation of their performance. Cerro Corona represents 10% of the Company's annual production

<sup>2</sup> Modified the evaluation system for South Deep by eliminating the quarters which were heavily impacted by the mandated shutdowns from the calculation of their performance. South Deep represents 10% of the Company's annual production

<sup>3</sup> The resultant performance achievement for the Group was assessed by using the actual rounded production-weighted average of each regional outcome on a gold-equivalent basis. This resulted in the Group outcome of 95% for STIP purposes

The unadjusted achievement levels against the original targets for 2020 approved prior to the onset of Covid-19 is below.

Objectives 2020	Weight	Target	Achieved
<b>Safety</b>			
• Safety Engagement Rate (SER)	5%	5.74	4.89
• Increase in near-miss reporting	5%	448	475
• Timely close-out of corrective actions on serious potential incidents	5%	95%	98%
• Reduction in serious injuries	5%	11	13
Gold (equivalent) production - (koz)	20%	2,369	2,334
AIC (US\$/oz) <sup>1</sup>	40%	1,058	1,081
<b>Development and waste</b>			
• Development at South Deep (metres)	4%	3,992	4,005
• De-stress at South Deep (metres)	4%	44,377	35,545
• Open-pit waste mined (ktonnes)	6%	128,607	128,288
• Underground development (metres)	6%	40,396	41,047

<sup>1</sup> Every year-end, AIC is adjusted for STIP purposes by measuring in local currency and converting to US Dollar at budgeted exchange rate, excluding worker's participation at Cerro Corona, and calculating the related royalty charge based on budgeted gold prices

## REMUNERATION REPORT continued

In line with their BSC performance, RemCo awarded the CEO and CFO bonuses equal to 75.2% and 71.9% of their annual GRP, respectively. The following chart shows the historical performance outcomes for the CEO and CFO over a five-year period through the percentage of GRP paid as bonus.

### CEO AND CFO FIVE-YEAR BONUS PAYOUT HISTORY AS A PERCENTAGE OF GRP

Performance rating	Label	Descriptor
5.0	Exceptional performer	Exceptional performer - far exceeded expectations by making a unique business contribution
4.5	Top performer	Top performer - consistently exceeds expectations in all areas
4.0	High performer	High performer - high standard achieved with expectations notably exceeded in some areas
3.5	Great performer	Great performer - consistently meets expectations with some great achievements
3.0	Good performer	Good performer - meets expectations
2.5	Moderate performer	Moderate performer - achieved most objectives set but not all
2.0	Low performer	Low performer - meets a few of the objectives set
1.0	Non-performer	Non-performer - did not achieve objectives set

### LONG-TERM INCENTIVES

The Group currently has the following LTIP in place:

- Equity-settled Share Plan awards for executives governed by Gold Fields' Share Plan (amended), details of which are provided in notes to the Annual Financial Statements (AFS)
- The cash-settled plans for all other eligible LTI participants in the regions and corporate offices

In addition, the Minimum Shareholding Requirement (MSR) Policy applies to shares held by executives.

### Performance share awards

#### Performance conditions

Awards made in terms of the Share Plan were subject to the following performance conditions:

#### Absolute and relative TSR

This has a 66% weighting broken down as below and measured over the three-year measurement period.

#### Absolute TSR – 33% of the initial award value will vest on the following

Target	TSR performance	TSR factor
Below target	0%	N/A
Target	Average US Dollar cost of equity as measured over a three-year period and independently assessed	100%
Stretch	Target +6% per annum	200%
Above stretch	Capped at 200%	200%

#### Relative TSR – 33% of the initial award value will vest on the following basis:

Target	TSR performance	TSR factor
Below target	0%	N/A
Target	Median of the peer group	100%
Stretch	Upper quartile of the peer group	200%
Above stretch	Capped at 200%	200%

### Free cash-flow margin

This has a 34% weighting and targets an average FCF margin of 15% with an average FCF margin of 20% for stretch for the three-year measurement period, calculated at a gold price of US\$1,300/oz. The FCF margin is expressed as a percentage and defined as revenue less: AIC, excluding share-based payments and LTIP charges (AIC, subject to any add-backs on exploration and projects), the realised portion of revenue hedges, taxation paid and LTIP payments divided by revenue (greenfields exploration, acquisitions, projects, dividends and debt service costs are excluded).

The use of a constant gold price benchmark over the period allows us to measure those elements within our control only, since gold price is outside of our control.

Target	FCF margin performance	FCF margin factor
Threshold	Average FCF margin over the performance period of 5% at a gold price of US\$1,300/oz - margin to be adjusted relative to actual gold price for the performance period	0%
Target	Average FCF margin over the performance period of 15% at a gold price of US\$1,300/oz - margin to be adjusted relative to actual gold price for the performance period	100%
Stretch	Average FCF margin over the performance period of 20% at a gold price of US\$1,300/oz - margin to be adjusted relative to actual gold price for the performance period	200%

In terms of the provisions of the Share Plan, eligible employees were awarded performance shares on 1 March of each year, which vest in mid-February three years later. The performance of these awards since 2018 is illustrated in the following tables.

### 2018 performance share award

**Performance period:** 1 January 2018 to 31 December 2020

**Vesting date:** 19 February 2021

Relative TSR - 33%		Absolute TSR - 33%		FCF margin - 34%	
Achieved	Vesting	Achieved	Vesting	Achieved	Vesting
200%	66%	200%	66%	21.2%	200%

**Overall achievement:** 200%

Executive	Number of shares awarded	US\$m value on award date	Estimated US\$m fair value at year-end
NJ Holland	380,207	1.33	7.01
PA Schmidt	278,594	0.98	5.14
A Baku	305,617	1.07	5.63
R Butcher	98,523	0.35	1.82
S Mathews	161,520	0.57	2.98
L Rivera	196,218	0.69	3.62
TL Harmse	150,434	0.53	2.77
BJ Mattison	242,291	0.85	4.47
NA Chohan	149,513	0.52	2.76
A Nagaser	102,633	0.36	1.89
M Preece	75,153	0.26	1.39
R Bardien	81,760	0.29	1.51
	2,222,463	7.79	40.98

The 2018 performance share award vested at 200% of initial award as detailed above, and the share price appreciation over the three-year period was more than threefold from an award price of R46.28.

## REMUNERATION REPORT continued

R Bardien	EVP: People and Organisational Effectiveness	63,597	0.41	1.11
		1,231,603	7.88	21.58

### Cash-settled long-term incentive plan

The Group executives do not participate in the cash-settled LTIP. The 2018 cash-settled LTIP is a three-year performance plan intended to provide alignment between employee's performance and Group strategy. Each performance cycle starts on 1 January of the first year and ends on 31 December of the third year. Participants include employees from level DL to EU, and regional Exco members participate 70% in the cash plan and 30% in the Share Plan. The cash plan has approximately 608 participants.

### Minimum shareholding requirement

As explained on p37 of this report, executives are encouraged to hold shares in Gold Fields in accordance with the MSR Policy. The MSR achievement in the table below is for the period up to 31 December 2020. Subsequent to this, the CEO increased his personal shareholding further through a share vesting in December 2020. The CEO is required to hold two times his annual salary in terms of the policy. The achievement level of 1,026% above means that, at end-2020, Nick Holland held shares valued at more than 10 times his annual target salary, in tranches valued at R45.15/share (in 2017), R57.38/share (in 2019) and R104.76/share (in 2020).

Some executives pledged restricted shares towards their MSR commitments by December 2020, which were actioned in February 2021 after the lifting of the closed period from 1 January 2021 to 17 February 2021.

During 2018, the Company entered a self-imposed special closed period for executive management to, inter alia, trade in shares, which slowed down the rate of achievement of the MSR Policy targets for some individuals. Furthermore, this closed period resulted in an extension in the MSR holding target date by an equivalent period of one year unless the executive reached their target level prior to the end of the holding period inclusive of the additional year.

Executives may elect to defer certain cash or equity awards to increase their MSR holdings. Any contribution purchased using post-tax income is grossed-up for taxes at the top prevailing marginal rate of individual tax when determining the contribution. Also refer to the share ownership table on p19 for full share ownership details. The number of shares subject to tax gross-up for the following executives are presented in the following table:

Name and title	Actual holdings (number of shares) <sup>1</sup>	MSR achievement	Holding period end date
NJ Holland, CEO <sup>2</sup>	3,896,003	1,026%	31 December 2020
PA Schmidt, CFO	204,248	107%	17 May 2021
M Preece, EVP: South Africa	216,032	230%	14 May 2023
A Nagaser, EVP: Investor Relations and Group Affairs	141,716	357%	17 May 2022
NA Chohan, EVP: Sustainable Development	192,529	190%	17 May 2022
TL Harmse, EVP: Group Head of Legal and Compliance	50,000	95%	17 May 2022
BJ Mattison, EVP: Strategy, Planning and Group Development	106,518	109%	17 May 2022
R Bardien, EVP: People and Organisational Effectiveness	14,532	45%	31 January 2024
A Baku, EVP: West Africa	53,872	22%	17 May 2022
R Butcher, EVP: Technical	41,287	83%	17 May 2022
L Rivera, EVP: Americas	—	—%	31 October 2022
S Mathews, EVP: Australasia	21,698	47%	31 January 2023

<sup>1</sup> 2020 committed shares included for all executives for indicative purposes, with personal holdings grossed-up for tax

<sup>2</sup> NJ Holland completed his holding period on 31 December 2020 in line with the provisions of the Executive MSR policy. His holdings above includes restricted shares (916,090) and matching shares (244,574) that vested and settled to him effective 31 December 2020 at a total value of US\$10,759,355 at a vwap of US\$9.27 per share as at 31 December 2020

### Executive directors' and prescribed officers' remuneration

The table of remuneration for executive directors and prescribed officers based on the total single-figure remuneration prescribed by King IV is included in this section. King IV requires the disclosure of a total single figure of remuneration, received and receivable for the reporting period that ties remuneration to the performance for the period.

The definitions used in the adoption of these remuneration reporting requirements under King IV follow. These should assist in a clearer understanding of the values and related terminology used in the table of remuneration.

In respect of the LTIPs, remuneration is reflected when performance conditions were met during the reporting period. If the only remaining vesting condition is continued employment, the remuneration is reflected in the period when all other performance conditions have been met. Remuneration included may not have legally transferred to the individual, and the individual may not yet have the unconditional right to enjoy the benefits thereof.

In line with King IV remuneration reporting guidelines, remuneration related to performance in the 2020 measurement period and the 2020 financial reporting year is disclosed in table on the next page. Other measurement and reporting period remuneration, cash flow and vesting restrictions may be found in the table Unvested Award and Cash Flow on Settlement on p50-53; Note 40 to Annual Financial Statements and other sections in this Remuneration Report.

## REMUNERATION REPORT continued

### Remuneration for executive directors and prescribed officers - all figures US\$'000

Name	Status		Salary <sup>1</sup>	Pension fund contribution
N Holland	Executive director	2020	1,174.2	21.7
		2019	1,226.8	24.2

B Mattison <sup>8</sup>	Prescribed officer	2020	416.8	22.2
		2019	441.4	24.2
T Harmse <sup>9</sup>	Prescribed officer	2020	327.5	23.1
		2019	354.3	25.1
A Nagaser	Prescribed officer	2020	229.5	23.8
		2019	234.2	24.6
S Mathews <sup>10</sup>	Prescribed officer	2020	493.6	56.9
		2019	472.1	54.5
M Preece <sup>11</sup>	Prescribed officer	2020	475.4	23.2
		2019	514.3	25.1
R Bardien <sup>12</sup>	Prescribed officer	2020	279.0	23.6
		2019	285.0	24.2

Exchange rates used: US\$1 = R16.38 (FY2019) and US\$1 = R14.46 (FY2019). No termination payments in the year

<sup>1</sup> N Holland, P Schmidt and B Mattison have contracts in ZAR and US\$. The 2020 US\$ contract amounts included above are: N Holland US\$424,550 P Schmidt US\$129,600 and B Mattison US\$92,100

The 2019 US\$ amounts included in the 2019 reporting were: N Holland US\$416,670, P Schmidt US\$127,190 and B Mattison US\$90,370

<sup>2</sup> The annual bonus accruals for the year ended 31 December 2019 were paid in February/March 2020. The annual bonus accruals for the year ended 31 December 2020 were paid in February/March 2021

<sup>3</sup> The values of the 2018 Performance Shares with a performance period ending 31 December 2020 is reflected in the 2020 figures. The value of the 2017 performance shares with a performance period ending 31 December 2019 is reflected in the 2019 figures. Values reported are as at 31 December 2020, calculated using forecasted 192% vesting and vwap of US\$9.27. Actual inputs calculated as at vesting date 15 February 2021 were 200% vesting and vwap of US\$7.67

<sup>4</sup> The cash equivalent value of matching shares awarded in 2020 under the terms of MSR Policy are reflected in 2020, and 2019 includes awards due in 2018 but made in 2019 due to a self-imposed special closed period

<sup>5</sup> Other includes business-related expense reimbursements and incidental payments unless otherwise stated; For NJ Holland – other includes long-service award of US\$2,800 for 30 years' service

<sup>6</sup> L Rivera – other payments include advance payment of portion of estimated Utilidades for 2019 and 2020. Benefit includes use of a company-owned vehicle

<sup>7</sup> A Baku – other payments for 2019 relate to leave encashment for 2019 and approved profit share bonus, leave encashment and leave travel allowance for 2020. Benefit includes use of a company-owned vehicle

<sup>8</sup> B Mattison – other payments for 2020 relate to business-related expense reimbursements

<sup>9</sup> T Harmse – other payments for 2020 relate to an approved bonus for handover to newly appointed Company Secretary, for her role as acting Company Secretary

<sup>10</sup> S Mathews – other payments for 2019 and 2020 relate to bonus payment for most improved and best operation bonus scheme. May avail of company-provided local transportation at operations, on non-exclusive basis

<sup>11</sup> M Preece may avail of company-provided local transportation at operations, on non-exclusive basis

<sup>12</sup> R Bardien – Elected prior to the determination of the annual performance bonus for 2019 and 2020, in line with the rules of the MSR Policy, to defer 40% of her 2019 cash bonus (US\$77,955) and 2020 cash bonus (US\$78,398) into Restricted Shares. Prior to such election her full calculated annual performance bonus for 2019 was US\$194,888 and for 2020, US\$195,995

## REMUNERATION REPORT continued

### Non-binding advisory vote – Implementation Report

As set out in King IV, shareholders are required to cast a non-binding advisory vote on the Implementation Report at Gold Fields' AGM on 6 May 2021.

Should there be a 25% or higher vote against the adoption of the above, we will embark upon a process of shareholder engagement to understand the drivers of the dissenting votes, and to discuss potential remedial measures.

### Non-executive director fees

NEDs were paid the following committee and Board fees as approved by shareholders on 21 May 2019 for the period 1 January 2020 to 31 May 2020; and on the 22 August 2020 for the period 1 June 2020 to 31 December 2020.

<sup>1</sup> Steven Reid – director of subsidiary entities in Netherlands and Isle of Man. Annual fees of €12,000 and £16,645 (2019: US\$14,351) – paid by Gold Fields Netherlands Services BV and Gold Fields Orogen Holding (BV) Limited, respectively

<sup>2</sup> Alhassan Andani – director of GF Ghana Ltd and Gold Fields Abooso Ltd. He received US\$69,681 (2019: US\$70,021) for duties performed on behalf of these entities

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS

The following management's discussion and analysis of the financial statements should be read together with the Gold Fields consolidated financial statements, including the notes accompanying these financial statements.

### OVERVIEW

Gold Fields is a significant producer of gold and a major holder of gold reserves and resources in South Africa, Ghana, Australia and Peru. In Peru, Gold Fields also produces copper. In addition, Gold Fields has completed a feasibility study on the Salares Norte deposit in Chile and the final notice to proceed ("FNTP") was provided by the Board in February 2020 and construction commenced in April 2020. In Chile, Gold Fields will produce silver and gold. Gold Fields is primarily involved in underground and surface gold and surface copper mining and related activities, including exploration, extraction, processing and smelting.

In 2020, the South African, Ghanaian (including Asanko), Peruvian and Australian operations produced 10%, 37%, 9% and 44% of its total gold production, respectively.

Gold Fields' economic interest in the South Deep mine in South Africa is 96.43%. Gold Fields also owns a 100% of the St Ives, Agnew, Granny Smith mines and 50% of the Gruyere gold mine in Australia, 90.0% of the Tarkwa and Damang mines in Ghana and 45% of the Asanko mine in Ghana. Gold Fields also owns 99.5% of the Cerro Corona mine in Peru.

### Salares Norte project

The Environmental Impact Assessment for the project was approved on 18 December 2019 and the final notice to proceed ("FNTP") was provided by the Board and construction commenced in 2020.

Construction activities at Salares Norte were relatively unaffected by the Covid-19 pandemic during 2020 and the project remained largely on schedule. US\$151 million was spent on Salares Norte in 2020, including district exploration of US\$30 million, initial capex of US\$97 million and prepayments accounting for the majority of the balance. At the end of December 2020, engineering progress was 97% complete, ahead of the planned 90%.

At 31 December 2020, construction progress stood at 16% versus plan of 10%, contributing towards total project progress of 27% coming in slightly ahead of plan of 24%. Camp phase I construction was completed during Q3 2020 while phase II construction was three months ahead of schedule at year-end. The mass earthworks contract was awarded at the end of May, with the contractor commencing activities on 21 September and completing the diversion channel earthworks and precast installation by year-end. The mining contractor completed mobilisation and began pioneering works on 1 October, as planned. Pre stripping of the pit and construction of the processing plant commenced during January 2021, in line with the project's construction schedule.

At the end of December 2020, 87% of the project estimate at completion ("EAC") budget (excluding remaining contingency) had a fixed and firm price (excluding inflation factors) through contracts and purchase orders awarded, significantly reducing the risk of price differences.

Salares Norte controls 84,000ha of mineral rights in the Salares Norte district and has carried out extensive district-wide exploration within a 20km radius of the plant site. During 2020, a total of 17,504 district exploration metres were drilled, focusing on the Horizonte Project, while more work was also done on step-out potential at Agua Amarga North and Brecha West targets near the Salares Norte project.

### Placing of ordinary shares

On 12 February 2020, Gold Fields successfully completed the placing of 41,431,635 new ordinary, no par value shares with existing and new institutional investors at a price of R90.20 per share. Gross proceeds of approximately R3.7 billion (US\$249 million) were raised through the placing. The net proceeds from the placing will be used to continue pre-development work and commence construction of the Salares Norte project.

### Reserves and resources

As of 31 December 2020, Gold Fields reported attributable proved and probable gold and copper reserves of approximately 50 million ounces of gold and 563 million pounds of copper, as compared to the 49 million ounces of gold and 616 million pounds of copper reported as of 31 December 2019.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Gold production

Gruyere – 50%	129.1	129.1	49.5	49.5	–	–
Australia region	1,016.8	1,016.8	914.3	914.3	886.4	886.4
<b>Total Group (including Asanko)</b>	<b>2,312.4</b>	<b>2,236.7</b>	2,269.5	2,195.4	2,107.8	2,035.7
<b>Total Group (excluding Asanko)</b>	<b>2,200.0</b>	<b>2,124.2</b>	2,156.5	2,082.4	2,063.2	1,991.2

Managed gold production for the Group (including Asanko) was 2,312 million ounces (2019: 2,270 million ounces and 2018: 2,108 million ounces) of gold equivalents in 2020, 2,237 million ounces (2019: 2,195 million ounces and 2018: 2,036 million ounces) of which were attributable to Gold Fields with the remainder attributable to non-controlling shareholders in Ghana and Peru.

Managed gold production for the Group (excluding Asanko) was 2,200 million ounces (2019: 2,157 million ounces and 2018: 2,063 million ounces) of gold equivalents in 2020, 2,124 million ounces (2019: 2,082 million ounces and 2018: 1,991 million ounces) of which were attributable to Gold Fields with the remainder attributable to non-controlling shareholders in Ghana and Peru.

During 2020, a decision was taken to align the production month-end with the calendar month-end, which resulted in a once-off addition of 10 production days in H1 2020. The impact of the extra production days is estimated at 45,000 ounces produced and sold during 2020, while the lost production from Covid-19 related stoppages is approximately 78,000 ounces, comprising South Deep at 32,000 ounces and Cerro Corona at 46,000 ounces.

At South Deep in South Africa, production increased by 2% from 6,907 kilograms (222,100 ounces) in 2019 to 7,056 kilograms (226,900 ounces) in 2020. The increase was due to the productivity improvement programmes introduced in 2019 starting to bear fruit, despite the operation being negatively impacted by Covid-19 restrictions. It is estimated that South Deep lost approximately 32,000 ounces due to Covid-19 related stoppages in 2020, partially offset by 10 additional production days as a result of the change in the production calendar.

At the Ghanaian operations (including Asanko), gold production increased by 3% from 840,500 ounces in 2019 to 861,700 ounces in 2020, mainly due to increased production at Damang as mining progressed into the main ore body at the Damang Pit Cutback. At the Ghanaian operations (excluding Asanko), gold production increased by 3% from 727,500 ounces in 2019 to 749,300 ounces in 2020, mainly due to increased production at Damang as mining progressed into the main ore body at the Damang Pit Cutback. At Tarkwa, gold production increased by 1% from 519,100 ounces in 2019 to 526,300 ounces in 2020 mainly due to higher tonnes milled due to the 10 additional production days as a result of the change in the production calendar. At Damang, gold production increased by 7% from 208,400 ounces in 2019 to 223,000 ounces in 2020 mainly due to higher yield and mill throughput due to the 10 additional production days as a result of the change in the production calendar. At Asanko, gold production attributable to Gold Fields decreased marginally from 113,000 ounces in 2019 to 112,500 ounces in 2020 mainly due to lower yield.

Gold equivalent production at Cerro Corona decreased by 29% from 292,700 ounces in 2019 to 207,100 ounces in 2020 mainly due to lower gold and copper grades processed, together with a lower price factor. The price factor was 3.5 in 2020 compared to 4.4 in 2019. It is estimated that Cerro Corona lost approximately 46,000 ounces due to Covid-19 related stoppages and 22,000 ounces due to the lower price factor, partially offset by 10 additional production days as a result of the change in the production calendar in 2020.

At the Australian operations, gold production increased by 11% from 914,300 ounces in 2019 to 1,016,800 ounces in 2020 mainly due to the inclusion of Gruyere for a full year in 2020 with the operation reaching commercial levels of production at the end of September 2019. St Ives' gold production increased by 4% from 370,600 ounces in 2019 to 384,900 ounces in 2020 with an 8% increase in tonnes milled, partially offset by a 4% decrease in yield. The higher tonnes milled were mainly due to the 10 additional production days as a result of the change in the production calendar. At Agnew, gold production increased by 6% from 219,400 ounces in 2019 to 233,000 ounces in 2020 due to increased ore tonnes processed mainly due to the 10 additional production days as a result of the change in the production calendar. At Granny Smith, gold production decreased by 2% from 274,800 ounces in 2019 to 269,600 ounces in 2020 due to 2% reduction in tonnes milled compared to 2019. At Gruyere, gold production attributable to Gold Fields increased by 161% from 49,500 ounces in 2019 to 129,100 ounces in 2020 due to production commencing in July 2019, with commercial production achieved by the end of September 2019.

### NON-IFRS MEASURES

The Annual Financial Report contains certain non-IFRS financial measures in respect of the Group's financial performance, the statement of financial position and cash flows presented in order to provide users with relevant information and measures used by the Group to assess performance. Non-IFRS financial measures are financial measures other than those defined or specified under all relevant accounting standards. To the extent that these measures are not included in the annual financial statements of Gold Fields Limited for the year ended 31 December 2020, these measures constitute pro-forma financial information in terms of the JSE Listings Requirements and are the responsibility of the Group's Board of Directors. They are presented for illustrative purposes only and due to their nature may not fairly present Gold Fields' financial position, changes in equity, results of operations or cash flows. In addition, these measures may not be comparable to similarly titled measures used by other companies.

The following table sets out the non-IFRS financial measures disclosed throughout the Annual Financial Report and where they are reconciled to IFRS:

Non-IFRS measure	Purpose of measure	Reference to where reconciled to IFRS
All-in sustaining costs ("AISC")	Intended to provide transparency into the costs associated with producing and selling an ounce of gold.	p62
All-in costs ("AIC")	Intended to provide transparency into the costs associated with producing and selling an ounce of gold (including growth capital).	p62
Adjusted EBITDA; Net debt; Net debt; (excluding lease liabilities); and Net debt to adjusted EBITDA	Used in the ratio to monitor the capital of the Group.	p209 and p122
Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares	Used to measure the cash generated by the core business.	p114
Adjusted free cash flow and adjusted free cash flow margin	Used as a key metric in the determination of the long-term incentive plan.	p72
Sustaining and non-sustaining capital expenditure	Used in the determination of AISC and AIC.	p63
Normalised profit and normalised profit per share	Forms the basis of the dividend pay-out policy.	p92

This pro-forma financial information has been reported on by the Group's auditors, being PricewaterhouseCoopers Inc. Refer pages 233 to 234 for their unqualified reporting accountant's report thereon.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### REVENUES

Substantially all of Gold Fields' revenues are derived from the sale of gold and copper. As a result, Gold Fields' revenues are directly related to the prices of gold and copper. Historically, the prices of gold and copper have fluctuated widely. The gold and copper prices are affected by numerous factors over which Gold Fields does not have control. The volatility of gold and copper prices is illustrated in the following tables, which show the annual high, low and average of the London afternoon fixing price of gold and the London Metal Exchange ("LME") cash settlement price for copper in US Dollar for the past 12 calendar years (2009 to 2020):

	Price per ounce <sup>1</sup>		
	High	Low	Average

Source: I-Net

<sup>1</sup> Rounded to the nearest US Dollar.

On 17 March 2021, the LME cash settlement price for copper was US\$9,027/t.

As a general rule, Gold Fields sells the gold it produces at market prices to obtain the maximum benefit from prevailing gold prices and does not enter into hedging arrangements such as forward sales or derivatives which establish a price in advance for the sale of its future gold production. Hedges can be undertaken in one or more of the following circumstances: to protect cash flows at times of significant capital expenditures, for specific debt servicing requirements and to safeguard the viability of higher cost operations. Significant changes in the prices of gold and copper over a sustained period of time may lead Gold Fields to increase or decrease its production in the near term, which could have a material impact on Gold Fields' revenues.

Sales of copper concentrate are “provisionally priced” – that is, the selling price is subject to final adjustment at the end of a period normally ranging from 30 to 90 days after delivery to the customer, based on market prices at the relevant quotation points stipulated in the contract.

Revenue on provisionally priced copper concentrate sales is recorded on the date of shipment, net of refining and treatment charges, using the forward LME price to the estimated final pricing date, adjusted for the specific terms of the agreements. Variations between the price used to recognise revenue and the actual final price received can be caused by changes in prevailing copper and gold prices. Changes in the fair value as a result of changes in forward metal prices are classified as provisional price adjustments and included as a component of revenue.

### Gold Fields’ realised gold and copper prices

The following table sets out the average, the high and the low London afternoon fixing price per ounce of gold and Gold Fields’ average US Dollar realised gold price during the past three years.

Realised gold price <sup>1</sup>	2020	2019	2018
Average	1,770	1,393	1,269
High	2,067	1,546	1,355
Low	1,474	1,270	1,178
Gold Fields’ average realised gold price <sup>2</sup>	1,768	1,388	1,252

<sup>1</sup> Prices stated per ounce.

<sup>2</sup> Gold Fields’ average realised gold price may differ from the average gold price due to the timing of its sales of gold within each year.

The following table sets out the average, the high and the low LME cash settlement price per tonne for copper and Gold Fields’ average US Dollar realised copper price during the past three years.

Realised copper price <sup>1</sup>	2020	2019	2018
Average	6,175	6,000	6,539
High	7,964	6,572	7,263
Low	4,618	5,537	5,823
Gold Fields’ average realised copper price <sup>2</sup>	6,184	5,996	6,547

<sup>1</sup> Prices stated per tonne.

<sup>2</sup> Gold Fields’ average realised copper price may differ from the average copper price due to the timing of its sales of copper within each year.

### PRODUCTION

Gold Fields’ revenues are primarily driven by its production levels and the price it realises on the sale of gold. Production levels are affected by a number of factors, some of which are described below. Total managed production for the Group (including Asanko) increased by 2% from 2.270 million ounces in 2019 to 2.312 million ounces in 2020. Total managed production (excluding Asanko) increased by 2% from 2.157 million ounces in 2019 to 2.200 million ounces in 2020.

### LABOUR IMPACT

In recent years, Gold Fields has experienced union activity in some of the countries in which it operates, specifically South Africa and Ghana.

A critical element of delivering safe production is a workforce that is appropriately structured and skilled to achieve the required results. Apart from focused recruitment and training programmes and setting up the right culture at the operations, it also means rightsizing the number of employees and contractors when conditions require this. In early 2018, Gold Fields announced a move by Tarkwa to contractor mining. The restructuring was completed successfully and the contractors started operations on 24 March 2018.

South Deep has a relatively well-educated labour force with a component of skilled and semi-skilled employees who receive remuneration packages that are competitive and highly incentivised. The National Union of Mineworkers (“NUM”) is the dominant union.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

South Deep embarked on a restructuring process on 14 August 2018. The prescribed consultation process was concluded on 28 October 2018 culminating in the retrenchment of 1,092 permanent employees and 420 contractors. The majority union, the NUM, obtained a certificate of non-resolution from the Commission for Conciliation, Mediation and Arbitration ("CCMA") and issued a notice of intended industrial action on 31 October 2018. The protected industrial action commenced on 2 November 2018 and lasted six weeks. Employees participating in the industrial action blocked all roads to the mine, limiting access and the ability to continue with any mining operations. Production was therefore suspended and essential services continued on an intermittent basis when access was possible. Negotiations with all levels of the union (branch, regional and national) concluded on 18 December 2018 with the signing of a new agreement that ended the industrial action. The mine gradually resumed operations from 15 December 2018. The process had a profound impact on production with the operations suspended for 41 days with a preceding "go slow" and acts of sabotage as from the announcement of restructuring. It took an additional eight days to start up the underground sections post-15 December 2018.

Over the years, Gold Fields has sought to develop relationships with trade unions that are supportive of the delivery of our business objectives, and the Group remains committed to this engagement.

There were no work stoppages as a result of strikes during 2019 and 2020 at any of the Gold Fields operations.

### HEALTH AND SAFETY IMPACT

Gold Fields' operations are also subject to various health and safety laws and regulations that impose various duties on Gold Fields' mines while granting the authorities broad powers to, among other things, close or suspend operations at unsafe mines and order corrective action relating to health and safety matters. Additionally, it is Gold Fields' policy to halt production at its operations when serious accidents occur in order to rectify dangerous situations and, if necessary, retrain workers. During 2020, Gold Fields' operations suffered four work safety-related stoppages at South Deep, one related to unsafe conditions and three related to improvement of practices. In South Africa, Gold Fields has actively engaged with the Department of Mineral Resources ("DMR") on the protocols applied to safety-related mine closures.

Amid the Covid-19 pandemic, the Group strengthened its efforts to protect the workforce and assist the communities and governments in mitigating the impact of the pandemic. During 2020 the operations spent approximately US\$30 million on Covid-19 related initiatives and interventions such as specialised camp accommodation, testing equipment and facilities, additional labour costs and transport facilities. A further US\$3 million was spent on donations to assist governments and communities in their fight against the pandemic.

Gold Fields expects that should the above factors continue, production levels and costs in the future will be impacted.

### COSTS

Over the last three years, Gold Fields' production costs consisted primarily of labour and contractor costs, power, water and consumable stores, which include explosives, diesel fuel, other petroleum products and other consumables. Gold Fields expects that its total costs, particularly the input costs noted above, are likely to continue to increase in the near future driven by general economic trends, market dynamics and other regulatory changes.

In order to counter the effect of increasing costs in the mining industry, the Group rationalised and prioritised capital expenditure without undermining the sustainability of its operations and continued prioritisation of cash generation over production volumes. The Group also undertook further reductions in labour costs.

### South Africa region

The Gold Fields' South African operation is labour intensive due to the use of deep level underground mining methods. As a result, over the last three fiscal years labour has represented on average 33% of AIC, as defined on page 62, at the South African operation. In 2020, labour represented 30% of AIC at the South African operation.

At the South African operation, power and water made up on average 10% of AIC over the last three years. In 2020, power and water costs made up 10% of AIC.

Gold Fields' South Deep mining operation depends on electrical power generated by the state-owned power provider Eskom which is regulated by the National Energy Regulator of South Africa ("NERSA"). Eskom tariffs are determined through a consultative multi-year price determination ("MYPD") process, with occasional tariff increase adjustments under the NERSA regulated Regulatory Clearing Account ("RCA") mechanism. Eskom financial years are from April to March. During 2018, Eskom submitted their three-year MYPD application to NERSA for 17%, 15% and 15%, applicable to periods 2019 to 2020, 2020 to 2021 and 2021 to 2022, respectively. NERSA then allowed Eskom tariff increases of 9.41%, 8.1% and 5.2%, for Eskom respective financial years 2019 to 2020, 2020 to 2021 and 2021 to 2022. Through the RCA mechanism, Eskom was granted another 4.41% for 2018 to 2019 and 0.66% for 2019 to 2020, thus the total applicable tariff increases were 13.82% for 2019 to 2020 and 8.76% for 2020 to 2021.

Eskom is saddled with an approximate debt of R450 billion and is struggling to generate enough revenue to service this debt and sustainably cover operations. In 2019, Government, as the Eskom shareholder, allocated an additional R23 billion per annum (over a three-year period, for 2019, 2020 and 2021) to Eskom, which NERSA treated as Eskom revenue from operations instead of an equity injection for balance sheet stability, effectively implying the bailout was a tariff subsidy by general taxpayers for the benefit of consumers. Eskom challenged the MYPD, RCA and NERSA's treatment of the bailout as a tariff subsidy in court, which ruled in favour of Eskom, allowing it to recover the additional R69 billion in a phased manner over a three-year period via future tariff increases. Having accepted the decision, NERSA appealed the remedy. Further, Eskom obtained a judgment to recover an additional shortfall of R35 billion for the periods from 2014 to 2015, 2015 to 2016 and 2016 to 2017, where NERSA had initially determined the RCA amount for those periods to be R32 billion when Eskom had applied for an amount of R67 billion. Eskom is also assessing its options with respect to NERSA's determination of a R13 billion RCA amount for the period from 2018 to 2019, instead of the R27 billion that Eskom had applied for. Eskom has been granted a 15.63% tariff increase for implementation in April 2021 following the approval of the liquidation of the R13 billion RCA amount for the 2018 to 2019 period; the approval of an additional R6 billion in revenue for the RCA applications for year 2 (2014/2015), year 3 (2015/2016) and year 4 (2016/2017) in the 2018 to 2019 period in February 2021 and the approval of an additional R10 billion of R23 billion in revenue as per court order which ruled on a phased recovery of the R69 billion equity support from government over a three year period in the 2019 to 2021 period.

At the same time, Eskom coal-fired power stations' performance continues to deteriorate. The underperformance is due to operating old power stations with delayed critical mid-life refurbishments, maintenance budgets diversion, allegations of corruption that saw construction of the new power station delayed, significant overspend and loss of critical skills at the generation business unit. During load shedding periods, Eskom burns significant amounts of diesel to run their gas turbines and calls on large power users to curtail power demand. The extended use of these gas turbines will lead to Eskom requesting further tariff increases. Current inflation is approximately 4.5%, thus Eskom's request is three times CPI tariff increases. Further tariff increases may lead to lower power demand as consumers switch to alternate electricity and energy sources, such as renewable energy sources, gas for domestic cooking and solar for water heating. This may further place a significant tariff burden to those remaining on the grid. Government has now acknowledged that Eskom is the single biggest risk to the economy and that the Eskom business model is obsolete. In February 2019, the President of South Africa announced the vertical unbundling of Eskom. This unbundling, while maintaining full-state ownership, is expected to result in the separation of Eskom's generation, transmission and distribution functions, which will require legislative and possibly policy reform. The unbundling is currently under way and is expected to be completed by December 2021 for the legal separation of the transmission function, and December 2022 for the generation and distribution functions. Eskom is also in the process of setting up 12 renewable energy projects, expected to be complete by the end of 2021. It is expected that these processes will take time to implement, causing continued poor reliability of the supply of electricity, instability in prices and a possible increase in the tariff in the future.

### West Africa region

In Ghana, Tarkwa and Damang mines are primarily supplied power by an independent power producer with on-site gas turbines through a long-term power purchase agreement. Prior to installation of the on-site turbines, Tarkwa and Damang were supplied power by Volta River Authority ("VRA") and Electricity Company of Ghana ("ECG"), respectively. The supply provided by the VRA and ECG was unreliable and in order to reduce their reliance on power supplied by the VRA and ECG, Tarkwa and Damang entered into a power purchasing agreement with the above independent power producer. Both VRA and ECG now serve as back supply for the Tarkwa and Damang mines, respectively. The independent power supply accounts for some 95% of the electricity consumed at Tarkwa mine and 100% at Damang mine with a 27.5 megawatt power plant at Damang and a 44 megawatt power plant at Tarkwa mine.

While Tarkwa has electricity supplied by an independent power producer, it experienced challenges with frequent power surges from the grid, which caused some delays in the process plant. During 2019, the independent power producer commissioned a 77km buried gas pipeline to supply Tarkwa and Damang with natural gas, instead of trucking in liquid petroleum gas via national roads.

Power and water costs represented on average 6% of AIC at Tarkwa over the last three years, and 4% of AIC during 2020. Over the last three years, power and water costs represented on average 7% of AIC at Damang with 6% in 2020.

Contractor costs represented on average 27% of AIC at Tarkwa over the last three years, and 26% of AIC during 2020. Over the last three years, contractor costs represented on average 33% of AIC at Damang with 57% in 2020. Following the restructuring concluded in the first half of 2016 in Damang and first quarter of 2018 for Tarkwa, the direct labour cost decreased as all mining and development is performed by outside contractors. Direct labour costs represent on average a further 10% of AIC at Tarkwa over the last three years and 10% in 2020. Over the last three years, direct labour costs represented on average 10% at Damang and 12% in 2020.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### South American region

At Cerro Corona, contractor costs represented on average 26% of AIC over the last three years and 26% of AIC during 2020. Direct labour costs represent on average a further 18% of AIC over the last three years and 18% in 2020. Power and water made up on average a further 5% of AIC over the last three years and 5% in 2020.

### Australia region

At the Australian operations, mining operations were historically conducted by outside contractors. However, at Agnew, owner mining is conducted at the underground operations, while development is conducted by outside contractors. At St Ives, owner mining is conducted at the underground and surface operations, but development is still conducted by contractors. Over the last three years, total contractor costs represented on average 24% at St Ives and 28% at Agnew of AIC and direct labour costs represented on average a further 13% at St Ives and 13% at Agnew of AIC. In 2020, contractors and direct labour costs represented 28% and 14% at St Ives and 29% and 14% at Agnew, respectively. Power and water made up, on average, a further 5% and 3% of AIC over the last three years and 5% and 2% of AIC in 2020 at St Ives and Agnew, respectively. At Granny Smith, mining operations and development are conducted through owner mining. Over the last three years, contractors and direct labour costs represented, on average, 11% and 21%, respectively, at Granny Smith. In 2020, contractors and direct labour costs represented 12% and 21% at Granny Smith. Power and water made up, on average, a further 6% of AIC over the last three years and 5% of AIC in 2020 at Granny Smith. At Gruyere, mining operations and development are conducted through owner mining. In 2020, contractors and direct labour costs represented 14% and 7% at Gruyere. Power and water made up a further 9% of AIC in 2020. No three year average is presented for Gruyere as the mine was only in commercial levels from quarter four of 2019.

The remainder of Gold Fields' total costs consists primarily of amortisation and depreciation, exploration costs and selling, administration and general and corporate charges.

### ALL-IN SUSTAINING AND ALL-IN COSTS

The World Gold Council has worked closely with its member companies to develop definitions for AISC and AIC. The World Gold Council is not a regulatory industry organisation and does not have the authority to develop accounting standards or disclosure requirements. Gold Fields ceased being a member of the World Gold Council in 2014. AISC and AIC are non-IFRS measures. These non-IFRS measures are intended to provide further transparency into the costs associated with producing and selling an ounce of gold. The new standard was released by the World Gold Council on 27 June 2013. It is expected that these metrics will be helpful to investors, governments, local communities and other stakeholders in understanding the economics of gold mining. The AISC incorporates costs related to sustaining current production. The AIC include additional costs which relate to the growth of the Group. AISC, as defined by the World Gold Council, are operating costs plus all costs not already included therein relating to sustaining current production, including sustaining capital expenditure. The value of by-product revenues such as silver and copper is deducted from operating costs as it effectively reduces the cost of gold production. AIC starts with AISC and adds additional costs which relate to the growth of the Group, including non-sustaining capital expenditure and exploration, evaluation and feasibility costs not associated with current operations.

On 14 November 2018, the World Gold Council published an update to its guidance note on the interpretation of all-in sustaining and all-in costs. The note provided additional clarity on what constitutes growth capital expenditure. Gold Fields has considered the new guidance note to ensure the interpretation of the guidelines is consistent with the additional guidance now available and has adopted it prospectively from 1 January 2019. One of the benefits of adopting the new standard is closer alignment of our cost reporting with existing practices in our sector.

AISC and AIC are reported on a per ounce of gold basis, net of by-product revenues (as per the World Gold Council definition) as well as on a per ounce of gold equivalent basis, gross of by-product revenues.

An investor should not consider AISC and AIC or operating costs in isolation or as alternatives to operating costs, cash flows from operating activities or any other measure of financial performance presented in accordance with International Financial Reporting Standards ("IFRS"). AISC and AIC as presented in this Annual Financial Report may not be comparable to other similarly titled measures of performance of other companies.

The following tables set out a reconciliation of Gold Fields' cost of sales before gold inventory change and amortisation and depreciation, as calculated in accordance with IFRS (refer to the consolidated financial statements), to its AISC (new interpretation) and AIC (new interpretation) net of by-product revenues per ounce of gold sold for 2020 and 2019. The following tables also set out AISC (new interpretation) and AIC (new interpretation) gross of by-product revenue on a gold equivalent ounce basis for 2020 and 2019.

<sup>1</sup> Equity-accounted joint venture.

<sup>2</sup> By-product revenue at Cerro Corona relates to copper. For all the other operations, by-product revenue relates to silver.

<sup>3</sup> Sustaining capital expenditure represents the majority of capital expenditures at existing operations, including underground mine development costs, ongoing replacement of mine equipment and other capital facilities and other capital expenditures at existing operations and is calculated as total capital expenditure of US\$583.7 million per note 41 to the consolidated financial statements, less non-sustaining capital expenditures. Non-sustaining capital expenditures (or growth capital) represent capital expenditures for major growth projects as well as enhancement capital for significant infrastructure improvements at existing operations.

<sup>4</sup> This total may not reflect the sum of the line items due to rounding.

<sup>5</sup> Includes exploration, feasibility and evaluation and share of equity-accounted losses of Far Southeast Gold Resources Incorporated ("FSE").

<sup>6</sup> Other includes offshore structure costs and management fees.

<sup>7</sup> Based on information underlying the audited consolidated annual financial statements of Gold Fields Limited for the year ended 31 December 2020.

<sup>2</sup> By-product revenue at Cerro Corona relates to copper. For all the other operations, by-product revenue relates to silver.

<sup>3</sup> This total may not reflect the sum of the line items due to rounding.

<sup>4</sup> Based on information underlying the audited consolidated annual financial statements of Gold Fields Limited for the year ended 31 December 2020.

### AISC AND AIC (NEW INTERPRETATION)

AISC net of by-product revenues (including Asanko) increased by 9% from US\$897 per ounce of gold in 2019 to US\$977 per ounce of gold in 2020, mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC net of by-product revenues (including Asanko) increased by 1% from US\$1,064 per ounce of gold in 2019 to US\$1,079 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

AISC net of by-product revenues (excluding Asanko) increased by 10% from US\$885 per ounce of gold in 2019 to US\$970 per ounce of gold in 2020, mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC net of by-product revenues (excluding Asanko) increased by 1% from US\$1,056 per ounce of gold in 2019 to US\$1,067 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

AISC gross of by-product revenues (including Asanko) increased by 10% from US\$917 per ounce of gold in 2019 to US\$1,005 per ounce of gold in 2020, mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC gross of by-product revenues (including Asanko) increased by 3% from US\$1,074 per ounce of gold in 2019 to US\$1,103 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

AISC gross of by-product revenues (excluding Asanko) increased by 10% from US\$905 per ounce of gold in 2019 to US\$999 per ounce of gold in 2020, mainly due higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC gross of by-product revenues (excluding Asanko) increased by 3% from US\$1,067 per ounce of gold in 2019 to US\$1,093 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

Royalties paid increased by US\$12 per ounce or 31% from US\$39 per ounce in 2019 to US\$51 per ounce in 2020. Covid-19 related costs (such as specialised camp accommodation, testing equipment and facilities, additional labour costs and transport facilities) are estimated at approximately US\$12 per ounce for 2020 and are included in the AISC and AIC.

The following tables set out a reconciliation of Gold Fields' cost of sales before gold inventory change and amortisation and depreciation, as calculated in accordance with IFRS (refer to the consolidated financial statements), to its AISC (original interpretation) and AIC (original interpretation) net of by-product revenues per ounce of gold sold for 2019 and 2018. The following tables also set out AISC (original interpretation) and AIC (original interpretation) gross of by-product revenue on a gold equivalent ounce basis for 2019 and 2018.

<sup>1</sup> Equity-accounted joint venture.

<sup>2</sup> By-product revenue at Cerro Corona relates to copper. For all the other operations, by-product revenue relates to silver.

<sup>3</sup> Sustaining capital expenditure represents the majority of capital expenditures at existing operations, including underground mine development costs, ongoing replacement of mine equipment and other capital facilities and other capital expenditures at existing operations and is calculated as total capital expenditure of US\$814.2 million per note 41 to the consolidated financial statements, less non-sustaining capital expenditures. Non-sustaining capital expenditures (or growth capital) represent capital expenditures for major growth projects as well as enhancement capital for significant infrastructure improvements at existing operations.

<sup>4</sup> This total may not reflect the sum of the line items due to rounding.

<sup>5</sup> Includes exploration, feasibility and evaluation and share of equity-accounted losses of Far Southeast Gold Resources Incorporated ("FSE").

<sup>6</sup> Other includes offshore structure costs and management fees.

<sup>7</sup> Based on information underlying the audited consolidated annual financial statements of Gold Fields Limited for the year ended 31 December 2020.

<sup>2</sup> By-product revenue at Cerro Corona relates to copper. For all the other operations, by-product revenue relates to silver.

<sup>3</sup> This total may not reflect the sum of the line items due to rounding.

<sup>4</sup> Based on information underlying the audited consolidated annual financial statements of Gold Fields Limited for the year ended 31 December 2020

**AISC AND AIC (ORIGINAL INTERPRETATION)**

AISC net of by-product revenues (including Asanko) decreased by 1% from US\$981 per ounce of gold in 2018 to US\$970 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC net of by-product revenues (including Asanko) decreased by 9% from US\$1,173 per ounce of gold in 2018 to US\$1,064 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as lower non-sustaining capital expenditure and lower exploration, feasibility and evaluation costs.

AISC net of by-product revenues (excluding Asanko) decreased by 2% from US\$979 per ounce of gold in 2018 to US\$962 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC net of by-product revenues (including Asanko) decreased by 10% from US\$1,172 per ounce of gold in 2018 to US\$1,056 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as lower non-sustaining capital expenditure and lower exploration, feasibility and evaluation costs.

AISC gross of by-product revenues (including Asanko) decreased marginally from US\$988 per ounce of gold in 2018 to US\$986 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC gross of by-product revenues (including Asanko) decreased by 8% from US\$1,166 per ounce of gold in 2018 to US\$1,074 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as lower non-sustaining capital expenditure and lower exploration, feasibility and evaluation costs.

AISC gross of by-product revenues (excluding Asanko) decreased by 1% from US\$987 per ounce of gold in 2018 to US\$979 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC gross of by-product revenues (excluding Asanko) decreased by 8% from US\$1,166 per ounce of gold in 2018 to US\$1,067 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as lower non-sustaining capital expenditure and lower exploration, feasibility and evaluation costs.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Adjusted free cash flow and adjusted free cash flow margin ("free cash flow" or "free cash flow margin")

Adjusted free cash flow under the existing LTIP scheme is defined as revenue (excluding by-product revenue) less AIC adjusted for non-cash share-based payments, non-cash long-term employee benefits, exploration, feasibility and evaluation costs outside of existing operations, non-sustaining capital expenditure for growth projects only, realised gains or losses on revenue hedges, redemption of Asanko preference shares and taxation paid (excluding royalties).

Adjusted free cash flow margin under the existing LTIP scheme is adjusted free cash flow divided by revenue adjusted for by-product revenue.

The adjusted FCF margin is calculated as follows:

<i>Figures in millions unless otherwise stated</i>	2020	2019	2018
Revenue <sup>1</sup>	<b>3,748.0</b>	2,798.9	2,406.6
Less: Cash outflow	<b>(2,710.8)</b>	(2,208.4)	(2,032.6)
AIC <sup>2</sup>	<b>(2,258.3)</b>	(2,112.9)	(2,228.3)
<i>Adjusted for:</i>			
Share-based payments <sup>3</sup>	<b>14.5</b>	20.5	37.5
Long-term employee benefits <sup>3</sup>	<b>51.3</b>	9.1	1.1
Exploration outside of existing operations <sup>2</sup>	<b>31.4</b>	50.0	78.2
Non-sustaining capital expenditure <sup>4</sup>	<b>102.8</b>	137.4	272.1
Revenue hedge <sup>5</sup>	<b>(411.3)</b>	(140.6)	41.7
Redemption of Asanko preference shares	<b>37.5</b>	10.0	–
Long-term employee benefits payment	<b>–</b>	–	(17.8)
Tax paid	<b>(278.7)</b>	(181.9)	(217.1)
<b>Adjusted FCF</b>	<b>1,037.2</b>	590.5	374.0
<b>Adjusted FCF margin</b>	<b>28%</b>	21%	16%

<sup>1</sup> Revenue less revenue from by-product revenue per AIC calculation (pages 63 to 71), being US\$3,892.1 million less US\$144.1 million, US\$2,967.1 million less US\$168.2 million and US\$2,577.8 million less US\$171.2 million, for 2020, 2019 and 2018 respectively.

<sup>2</sup> Per AIC calculation in management discussion and analysis (per pages 63 to 71).

<sup>3</sup> Per note 41 of the consolidated financial statements.

<sup>4</sup> Includes non-sustaining capital expenditure for growth projects only at Damang and Salares Norte (2019 and 2018: Damang and Gruyere).

<sup>5</sup> Represents realised hedges on revenue only, excludes unrealised revenue hedges as well as cost hedges.

<sup>6</sup> Based on information underlying the audited consolidated annual financial statements of Gold Fields Limited for the year ended 31 December 2020.

### ROYALTIES

#### South Africa

The Royalty Act was promulgated on 24 November 2008 and came into operation on 1 March 2010. The Royalty Act imposes a royalty on refined and unrefined minerals payable to the South African government.

The royalty in respect of refined minerals (which include gold and platinum) is calculated by dividing earnings before interest and taxes ("EBIT"), as defined by the Royalty Act, by the product of 12.5 times gross revenue calculated as a percentage, plus an additional 0.5%. EBIT refers to taxable mining income (with certain exceptions such as no deduction for interest payable and foreign exchange losses) before assessed losses but after capital expenditure. A maximum royalty of 5% is levied on refined minerals.

The royalty in respect of unrefined minerals (which include uranium) is calculated by dividing EBIT by the product of nine times gross revenue calculated as a percentage, plus an additional 0.5%. A maximum royalty of 7% is levied on unrefined minerals.

Where unrefined mineral resources (such as uranium) constitute less than 10% in value of the total composite mineral resources, the royalty rate in respect of refined mineral resources may be used for all gross sales and a separate calculation of EBIT for each class of mineral resources is not required. For Gold Fields, this means that currently it will pay a royalty based on the refined minerals royalty calculation as applied to its gross revenue. The rate of royalty tax payable for 2020, 2019 and 2018 was 0.5% of revenue.

## Ghana

Minerals are owned by the Republic of Ghana and held in trust by the President. Under the terms of the March 2016 Development Agreement (“DA”) entered into with the government of Ghana, Tarkwa and Damang have been subject to a sliding scale for royalty rates, linked to the prevailing gold price from 1 January 2021. The royalty sliding scale is as follows:

Average gold price		Royalty rate
Low value	High value	
US\$0.00	– US\$1,299.99	3.0%
US\$1,300.00	– US\$1,449.99	3.5%
US\$1,450.00	– US\$2,299.99	4.1%
US\$2,300.00	– Unlimited	5.0%

The average rate of royalty tax payable for 2020, 2019 and 2018 based on the above sliding scale was 4.1%, 3.5% and 3.0% on revenue, respectively. Asanko does not have a DA with the government and was subject to a 5% royalty tax rate for 2020, 2019 and 2018.

## Australia

Royalties are payable to the state based on the amount of gold produced from a mining tenement. Royalties are payable quarterly at a fixed rate of 2.5% of the royalty value of gold sold. The royalty value of gold is the amount of gold produced during the month multiplied by the average gold spot price for the month.

## Peru

Royalties and Special Mining Tax are both calculated with reference to the operating margin and ranging from 1% (for operating margins less than 10%) to 12% (for operating margins of more than 80%), or 1% of revenue, the highest of both amounts. Cerro Corona’s effective royalty and Special Mining Tax rate for 2020, 2019 and 2018 was 3.9%, 3.6% and 4.0% of operating profit, respectively.

## Chile

Chile levies a royalty (referred to as the special mining income tax) on all medium to large scale mining operations in Chile. Gold Fields anticipates that its Chilean subsidiary will be treated as a large scale mineral producer. This is because it will produce annual gold equivalent ounces in excess of 50,000 metric tonnes of fine copper. The applicable mining tax percentage is calculated on a sliding scale with reference to the mining operational profit margin. The tax rate is from 5% (for operating margins equal to or less than 35%) to 14% (for operating margins of 85% or more). The mining tax payable is calculated at the applicable tax rate on the net operating income of the Chilean subsidiary. The mining tax is a deductible expense in the calculation of the Chilean corporate tax.

## INCOME AND MINING TAXES

### Gold Fields tax strategy and policy

The Gold Fields tax strategy is to proactively manage its tax obligations in a transparent, responsible and sustainable manner, acknowledging the differing interests of all stakeholders.

Gold Fields has invested and allocated appropriate resources in the Group tax department to ensure compliance with global tax obligations. The Group does not engage in aggressive tax planning and seeks to maintain professional real-time relationships with the relevant tax authorities. In material or complex matters, the Group would generally seek advance tax rulings, or alternatively obtain external counsel opinion.

Gold Fields has appropriate controls and procedures in place to ensure compliance with relevant tax legislation in all the jurisdictions in which it operates. This includes compliance with transfer pricing (“TP”) legislation and associated TP documentation requirements, which is governed by the Group TP policy. The Group TP policy is fully compliant with OECD guidelines and is regularly updated and benchmarked by independent experts. Uncertain tax positions are properly evaluated, and reported in terms of IFRIC 23 *Uncertainty over Income Tax Treatments*.

The Group is subject to South African Controlled Foreign Companies (“CFC”) tax legislation which is aimed at taxing passive income and capital gains realised by its foreign subsidiaries (to the extent that it was not taxed in the foreign jurisdiction). Therefore, tax avoidance on passive income or capital gains cannot be achieved by shifting such passive income to low or tax haven jurisdictions. The active business income from mining is taxed at source in the relevant jurisdiction where the mining operations are located.

The Group does not embark on intra-group gold sales and only sells its gold (or gold-equivalent product) directly to independent third parties at arm’s-length prices – generally at the prevailing gold (or gold-equivalent) spot price.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

The Group has reported its key financial figures on a country-by-country basis from 2017 as required by the South African Revenue Service ("SARS"), such requirement being aligned with OECD guidelines. The country-by-country reports are filed with SARS, which will exchange the information with all the relevant jurisdictions with which it has concluded or negotiated exchange of information agreements.

### South Africa

Generally, South Africa imposes tax on the worldwide income (including capital gains) of all of Gold Fields' South African incorporated and tax resident entities. Certain classes of passive income such as interest and royalties, and certain capital gains, derived by Controlled Foreign Companies ("CFC") could be subject to South African tax on a notional imputation basis. CFCs generally constitute a foreign company in which Gold Fields owns or controls more than 50% of the shareholding.

Gold Fields pays taxes on its taxable income generated by its mining and non-mining tax entities. Under South African law, gold mining companies and non-gold mining companies are taxed at different rates. Companies in the Group not carrying on direct gold mining operations are taxed at a statutory rate of 28%.

Gold Fields Operations Limited ("GFO"), and GFI Joint Venture Holdings Proprietary Limited ("GFIJVH"), jointly own the South Deep mine and constitute gold mining companies for South African taxation purposes. These companies are subject to the gold formula on their mining income.

The applicable formula takes the form  $Y = 34 - 170/x$

Where:

Y = the tax rate to be determined

x = the ratio of taxable income to the total income (expressed as a percentage)

The effective mining tax rate for GFO and GFIJVH, owners of the South Deep mine, has been calculated at 29% (2019: 29% and 2018: 29%).

### Ghana

Ghanaian resident entities are subject to tax on a worldwide income basis however, general source based tax principles are applied. Where income has a source in Ghana, it accrues in or is derived from Ghana. Under the terms of the Development Agreement ("DA") entered into with the government of Ghana, Tarkwa and Damang are liable to a 32.5% corporate income tax rate. Asanko does not have a DA with the government and is subject to a 35% corporate income tax rate.

Dividends paid by Tarkwa and Damang are subject to an 8% withholding tax rate, reduced if terms and conditions of an applicable Double Tax Agreement are met.

Tarkwa and Damang are allowed to deduct 20% on a straight-line basis for capital allowances on depreciable assets (i.e. over five years). Any capital allowances which are not utilised in a particular year are added to operating losses (if any), thereby increasing operating losses and then carried forward for five years. Any operating losses carried forward are extinguished if not utilised within five years on a first in, first out basis.

The Revenue Administration Act, 2016 (Act 915) became effective on 1 January 2017. Act 915 consolidates the tax administration provisions from the various tax laws (income tax, value added tax, customs) into a single Act and introduces a more stringent tax compliance framework. Act 915 enables taxpayers to offset surpluses and liabilities arising from different tax types. It should be noted that the tax authorities are again expected to release guidance notes to allow taxpayers to fully utilise the offset mechanism.

Eight years after the introduction of TP regulations in Ghana, the Government has repealed and replaced the TP regulations with new TP regulations in 2020. The new TP rules are intended to ease the compliance burden and provide additional clarity. The tax authorities are yet to release guidance notes or updated return templates to aid in implementation and administration.

### Australia

Generally, Australia imposes tax on the worldwide income (including capital gains) of all of Gold Fields' Australian incorporated and tax resident entities. The current income tax rate for companies with turnover of A\$50 million or more is 30%. Exploration expenditure is deductible in full as incurred. The Australian Uniform Capital Allowance regime allows tax deductions for the decline in value of depreciable assets and certain other capital expenditures over the effective lives of the assets acquired or constructed.

Gold Fields Australia and its eligible related Australian sister companies, together with all wholly owned Australian subsidiaries, have elected to be treated as a tax consolidated group for income taxation purposes. As a tax consolidated group, a single income tax return is lodged for the Group based on the consolidated results of all companies within the Group.

Withholding tax is payable on dividends, interest and royalties paid by Australian residents to non-residents. In the case of dividend payments to non-residents, withholding tax at a rate of 30% will apply. However, where the recipient of the dividend is a resident of a country with which Australia has concluded a double taxation agreement, the rate of withholding tax is generally limited to between 0% and 15%, depending on the applicable agreement and shareholding percentage. Where dividends are paid out of profits that have been subject to Australian corporate tax there is no withholding tax, regardless of whether a double taxation agreement is in place.

### Peru

Peruvian taxes for resident individuals and domiciled corporations are based on their worldwide income, and for non-resident individuals and non-domiciled corporations are based on their Peruvian income source. The general income tax rate applicable to domiciled corporations is 29.5% on taxable income and to non-resident corporations is 30%. The income tax applied to interest paid to non-residents is 4.99%. The dividends tax rate (to residents and non-residents) is 5%. Capital gains are also taxed as ordinary income for domiciled corporations.

### Chile

Gold Fields anticipates that its Chilean subsidiary will be subject to the 27% corporate tax rate, and that dividends paid by the Chilean subsidiary to the parent company will be subject to a 35% withholding tax rate, but that the 27% corporate tax paid will fully count as a credit against the withholding tax levied, so that the effective dividend withholding tax rate will approximate 8%.

### EXCHANGE RATES

Gold Fields' Australian and South African revenues and costs are very sensitive to the Australian Dollar/US Dollar exchange rate and the Rand/US Dollar exchange rate, because revenues are generated using a gold price denominated in US Dollar, while the costs of the Australian and South African operations are incurred principally in Australian Dollar and Rand, respectively. Depreciation of the Australian Dollar and Rand against the US Dollar reduces Gold Fields' average costs when they are translated into US Dollar, thereby increasing the operating margin of the Australian and South African operations. Conversely, appreciation of the Australian Dollar and Rand results in Australian and South African operating costs being translated into US Dollar at a lower Australian Dollar/US Dollar exchange rate and Rand/US Dollar exchange rate, resulting in higher costs in US Dollar terms and in lower operating margins. The impact on profitability of any change in the value of the Australian Dollar and Rand against the US Dollar can be substantial. Furthermore, the exchange rates obtained when converting US Dollar to Australian Dollar and Rand are set by foreign exchange markets, over which Gold Fields has no control. In 2020, the Rand weakened by 13% against the US Dollar, from an average of R14.46 per US\$1.00 in 2019 to R16.38 per US\$1.00 in 2020. The Australian Dollar weakened by 1% at an average of A\$1.00 per US\$0.70 in 2019 to A\$1.00 per US\$0.69 in 2020.

With respect to its operations in Ghana and Peru, a substantial portion of Gold Fields' operating costs (including wages) are either directly incurred in US Dollar or are translated to US Dollar. Accordingly, fluctuations in the Ghanaian Cedi and Peruvian Nuevo Soles do not materially impact operating results for the Ghana and Peru operations.

A portion of the Salares Norte project's capital expenditure is denominated in Chilean pesos. Depreciation or appreciation of the Chilean peso against the US dollar will reduce or increase their capital expenditure when translating into US dollars. In 2020, Gold Fields entered into a foreign currency hedge to mitigate the full exchange rate exposure.

Gold Fields entered into the following currency forward contracts:

#### Australia foreign currency hedge

In May 2018, the Australian operations entered into Australian Dollar/US Dollar average rate forwards for a total notional US\$96 million for the period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7517. In June 2018, further hedges were taken out for a total notional US\$60 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7330. In September 2018, further hedges were taken out for a total notional US\$100 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7182. In October 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$60 million at an average strike price of A\$/US\$ 0.7075. In December 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$50 million at an average strike price of A\$/US\$ 0.715.

At 31 December 2020, the mark-to-market value on the hedges was A\$nil (US\$nil) (2019: US\$nil (US\$nil)) with a realised loss of A\$nil (US\$nil million) (2019: A\$22 million (US\$14 million)), partially offset by an unrealised gain of A\$nil (US\$nil) (2019: A\$12 million (US\$7 million)) for the year ended 31 December 2020.

#### Salares Norte foreign currency hedge

In March 2020, a total notional amount of US\$544.5 million was hedged at a rate of CLP/US\$836.45 for the period July 2020 to December 2022.

At 31 December 2020, the mark-to-market value on the hedge was a positive US\$86 million (2019: US\$nil) with a realised gain of US\$5 million (2019: US\$nil) and an unrealised gain of US\$86 million (2019: US\$nil) for the year ended 31 December 2020.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### INFLATION

A period of significant inflation could adversely affect Gold Fields' results and financial condition. Further, over the past several years, production costs, especially wages and electricity costs, have increased considerably. The effect of these increases has adversely affected, and may continue to adversely affect, the profitability of Gold Fields' South Deep operations.

To ensure sustainability and free cash flow generation, reinvesting in and upgrading the Gold Fields portfolio is essential. To achieve this, Gold Fields embarked on a period of reinvestment in 2017 and 2018. 2019 marked the end of the reinvestment programme and having reinvested close to US\$1 billion in the business over this period, the Group managed to limit the cash outflow, with minimal impact on the statement of financial position. Given the high levels of capital expenditure, the Group undertook short-term hedging. For further details, refer to pages 203 to 205.

The Group continued rationalising and prioritising capital expenditure without undermining the sustainability of its operations and continued prioritisation of cash generation over production volumes.

Further, the majority of Gold Fields' costs at the South African operations are in Rand and revenues from gold sales are in US Dollar. Generally, when inflation is high, the Rand potentially devalues thereby increasing Rand revenues and potentially offsetting the increase in costs. However, there can be no guarantee that any cost-saving measures or the effects of any potential devaluation will offset the effects of increased inflation and production costs.

The same applies to the Australian operations with regard to the link between the Australian Dollar and US Dollar. The Peruvian and Ghanaian operations, on the other hand, are affected by inflation without a potential similar effect on revenue proceeds, thereby increasing the impact of inflation on the operating margins.

### CAPITAL EXPENDITURES

Gold Fields will continue to be required to make capital investments in both new and existing infrastructure and opportunities and, therefore, management will be required to continue to balance the demands for capital expenditure in the business and allocate Gold Fields' resources in a focused manner to achieve its sustainable growth objectives. Gold Fields expects that its use of available capital resources and allocation of its capital expenditures may shift in future periods as it increases investment in certain of its exploration projects.

Gold Fields adopted the new Interpretation of the World Gold Council prospectively from 1 January 2019. To ensure comparability in 2019, capital for 2019 and 2018 was presented only using the original method. In 2020, capital expenditure for 2020 and 2019 is presented according to the new Interpretation. Only the split between sustaining and non-sustaining capital is amended. Total capital expenditure remains the same under both methods.

### Group

Capital expenditure for the Group (excluding Asanko) decreased by 5%, from US\$613 million in 2019 (comprising sustaining capital expenditure of US\$324 million and growth capital expenditure of US\$289 million) to US\$584 million in 2020 (comprising sustaining capital expenditure of US\$409 million and growth capital expenditure of US\$175 million). Set out below are the capital expenditures made by Gold Fields during 2020. Also, refer to "Cash flows from investing activities" section.

The growth capital expenditure (excluding Asanko) of US\$175 million in 2020 comprised South Deep of R86 million (US\$5 million), Damang of US\$6 million, Cerro Corona of US\$26 million, St Ives of A\$17 million (US\$12 million), Agnew of A\$12 million (US\$9 million), Granny Smith of A\$28 million (US\$19 million), Gruyere of A\$2 million (US\$1 million) and Salares Norte of US\$97 million. The growth capital expenditure of US\$289 million in 2019 comprised Damang of US\$71 million, Cerro Corona of US\$12 million, St Ives of A\$75 million (US\$52 million), Agnew of A\$58 million (US\$41 million), Granny Smith of A\$67 million (US\$46 million) and Gruyere of A\$96 million (US\$67 million).

### South African operation

Gold Fields spent R804 million (US\$49 million) on capital expenditure at South Deep in 2020 and has budgeted approximately R1,234 million (US\$71 million) for capital expenditure at South Deep in 2021. The capital expenditure of R804 million (US\$49 million) in 2020 comprised sustaining capital expenditure of R718 million (US\$44 million) and growth capital expenditure of R86 million (US\$5 million). The budgeted capital expenditure of R1,234 million (US\$79 million) comprises sustaining capital expenditure of R889 million (US\$57 million) and growth capital expenditure of R345 million (US\$22 million).

### Ghanaian operations

Gold Fields spent US\$147 million on capital expenditure at Tarkwa in 2020 and has budgeted US\$174 million for capital expenditure at Tarkwa for 2021. The total spend relates to sustaining capital expenditure.

Gold Fields spent US\$20 million on capital expenditure at Damang in 2020 and has budgeted US\$23 million of capital expenditure at Damang for 2021. The expenditure of US\$20 million in 2020 comprised sustaining capital expenditure of US\$14 million and growth capital expenditure of US\$6 million. The budgeted capital expenditure of US\$23 million comprises sustaining capital expenditure of US\$13 million and growth capital expenditure of US\$10 million.

The capital expenditure at Asanko for 2020 was US\$31 million. The capital expenditure of US\$31 million in 2020 comprised sustaining capital expenditure of US\$13 million and growth capital expenditure of US\$18 million. Budgeted capital expenditure for Asanko will be updated later in the year when a new and approved business plan is provided by Galiano Gold Inc. to the Group.

### Peruvian operation

Gold Fields spent US\$50 million on capital expenditure at Cerro Corona in 2020 and has budgeted US\$58 million for capital expenditure at Cerro Corona for 2021. The capital expenditure of US\$50 million in 2020 comprised US\$24 million sustaining capital expenditure and US\$26 million growth capital. The budgeted capital expenditure of US\$58 million comprises sustaining capital expenditure of US\$30 million and growth capital expenditure of US\$28 million.

### Australian operations

Gold Fields spent A\$107 million (US\$74 million) on capital expenditure at St Ives in 2020 and has budgeted A\$129 million (US\$97 million) for capital expenditure at St Ives in 2021. The capital expenditure of A\$107 million (US\$74 million) in 2020 comprised A\$90 million (US\$62 million) sustaining capital expenditure and A\$17 million (US\$12 million) growth capital. The budgeted capital expenditure of A\$129 million (US\$97 million) comprises sustaining capital expenditure of A\$110 million (US\$83 million) and growth capital expenditure of A\$19 million (US\$14 million).

Gold Fields spent A\$75 million (US\$52 million) on capital expenditure at Agnew in 2020 and has budgeted A\$113 million (US\$85 million) for capital expenditure at Agnew for 2021. The capital expenditure of A\$75 million (US\$52 million) in 2020 comprised A\$63 million (US\$43 million) sustaining capital expenditure and A\$12 million (US\$9 million) growth capital. The budgeted capital expenditure of A\$113 million (US\$85 million) comprises sustaining capital expenditure of A\$72 million (US\$54 million) and growth capital expenditure of A\$41 million (US\$31 million).

Gold Fields spent A\$96 million (US\$66 million) on capital expenditure at Granny Smith in 2020 and has budgeted A\$147 million (US\$110 million) for capital expenditure at Granny Smith for 2021. The capital expenditure of A\$96 million (US\$66 million) in 2020 comprised A\$69 million (US\$47 million) sustaining capital expenditure and A\$28 million (US\$19 million) growth capital. The budgeted capital expenditure of A\$147 million (US\$110 million) comprises sustaining capital expenditure of A\$116 million (US\$87 million) and growth capital expenditure of A\$31 million (US\$23 million).

Gold Fields spent A\$41 million (US\$28 million) on capital expenditure at the Gruyere Gold project in 2020 and has budgeted A\$57 million (US\$43 million) for capital expenditure for 2021. The capital expenditure of A\$41 million (US\$28 million) in 2020 comprised A\$39 million (US\$27 million) sustaining capital and A\$2 million (US\$1 million) growth capital. The budgeted capital expenditure of A\$57 million (US\$43 million) comprises sustaining capital expenditure of A\$54 million (US\$41 million) and growth capital of A\$3 million (US\$2 million).

### Chilean operation

Gold Fields spent US\$97 million on capital expenditure at Salares Norte in 2020 and has budgeted US\$508 million for capital expenditure at Salares Norte for 2021. Total spend in 2020 and budgeted capital expenditure for 2021 relate to growth capital.

The actual capital expenditure for the future periods noted above may be different from the amounts set out above and the amount of actual capital expenditure will depend on a number of factors, such as production volumes, the price of gold, copper and other minerals mined by Gold Fields and general economic conditions. Some of the factors are outside of the control of Gold Fields.

### SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

Gold Fields' significant accounting policies are more fully described in the accounting policies to its consolidated financial statements included in this Annual Financial Report. Some of Gold Fields' accounting policies require the application of significant judgements and estimates by management that can affect the amounts reported in the consolidated financial statements. By their nature, these judgements are subject to a degree of uncertainty and are based on Gold Fields' historical experience, terms of existing contracts, management's view on trends in the gold mining industry, information from outside sources and other assumptions that Gold Fields considers to be reasonable under the circumstances. Actual results could differ from these estimates under different assumptions or conditions. Refer to the accounting policies, pages 133 to 155, to the consolidated financial statements included elsewhere in this Annual Financial Report for the more significant areas requiring the use of management judgements and estimates.

### RESULTS FOR THE PERIOD – YEARS ENDED 31 DECEMBER 2020 AND 31 DECEMBER 2019

Profit attributable to owners of the parent for the Group increased by 346% from US\$162 million (or US\$0.20 per share) in 2019 to US\$723 million (or US\$0.82 per share) in 2020.

The reasons for this increase are discussed on the following page.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Revenue

Revenue increased by 31% from US\$2,967 million in 2019 to US\$3,892 million in 2020. The increase in revenue of US\$925 million was due to the higher gold price and higher gold sold.

The average US Dollar gold price achieved by the Group increased by 27% from US\$1,388 per equivalent ounce in 2019 to US\$1,768 per equivalent ounce in 2020. The average Rand gold price increased by 41% from R659,111 per kilogram in 2019 to R928,707 per kilogram in 2020. The average Australian Dollar gold price increased by 27% from A\$2,007 per ounce in 2019 to A\$2,551 per ounce in 2020. The average US Dollar gold price for the Ghanaian operations (including Asanko) increased by 28% from US\$1,384 per ounce in 2019 to US\$1,766 per ounce in 2020 and the average US Dollar gold price for the Ghanaian operations (excluding Asanko) increased by 28% from US\$1,387 per ounce in 2019 to US\$1,773 per ounce in 2020. The average equivalent US Dollar gold price, net of treatment and refining charges, for Cerro Corona increased by 34% from US\$1,344 per equivalent ounce in 2019 to US\$1,795 per equivalent ounce in 2020. The average US Dollar/Rand exchange rate weakened by 13% from R14.46 in 2019 to R16.38 in 2020. The average Australian/US Dollar exchange rate weakened by 1% from A\$1.00 = US\$0.70 in 2018 to A\$1.00 = US\$0.69 in 2019.

Gold sales from operations (excluding Asanko) increased by 3% from 2,137,800 equivalent ounces in 2019 to 2,202,100 equivalent ounces in 2020. Gold sales at the South African operation increased by 2% from 6,907 kilograms (222,100 ounces) in 2019 to 7,056 kilograms (226,900 ounces) in 2020. Gold sales at the Ghanaian operations (excluding Asanko) increased by 3% from 727,400 ounces in 2019 to 749,200 ounces in 2020. Gold equivalent sales at the Peruvian operation (Cerro Corona) decreased by 31% from 296,900 equivalent ounces in 2019 to 205,500 equivalent ounces in 2020. At the Australian operations, gold sales increased by 14% from 891,400 ounces in 2019 to 1,020,500 ounces in 2020. As a general rule, Gold Fields sells all the gold it produces.

	2020			2019		
	Revenue US\$ million	Gold sold '000oz	Gold produced '000oz	Revenue US\$ million	Gold sold '000oz	Gold produced '000oz
South Deep	400.1	226.9	226.9	314.8	222.1	222.1
Tarkwa	927.7	526.3	526.3	720.4	519.1	519.1
Damang	400.8	223.0	223.0	288.3	208.4	208.4
Asanko <sup>1</sup>	188.2	109.7	112.5	153.3	112.0	113.0
Cerro Corona	368.8	205.5	207.1	399.0	296.9	292.7
St Ives	691.4	393.8	384.9	505.0	363.3	370.6
Agnew	411.5	233.5	233.3	304.6	219.6	219.4
Granny Smith	466.4	265.2	269.6	383.8	274.8	274.8
Gruyere – 50%	225.4	128.0	129.1	51.2	33.7	49.5
Total Group (including Asanko)	4,080.2	2,311.8	2,312.4	3,120.4	2,249.8	2,269.5
Total Group (excluding Asanko)	3,892.1	2,202.1	2,200.0	2,967.1	2,137.8	2,156.5

<sup>1</sup> Equity-accounted joint venture. Included above for information only, not included in revenue for the Group.

At South Deep in South Africa, gold sales increased by 2% from 6,907 kilograms (222,100 ounces) in 2019 to 7,056 kilograms (226,900 ounces) in 2020 due to the productivity improvement programmes introduced in 2019 starting to bear fruit, despite the operation being negatively impacted by Covid-19 restrictions. It is estimated that South Deep lost approximately 32,000 ounces due to Covid-19 related stoppages in 2020, partially offset by 10 additional production days as a result of the change in the production calendar.

At the Ghanaian operations, gold sales at Tarkwa increased by 1% from 519,100 ounces in 2019 to 526,300 ounces in 2020 mainly due to higher tonnes milled. The higher tonnes milled were mainly due to the 10 additional production days as a result of the change in the production calendar. Damang's gold sales increased by 7% from 208,400 ounces in 2019 to 223,000 ounces in 2020 mainly due to higher yield and mill throughput due to the 10 additional production days as a result of the change in the production calendar. Gold sales at Asanko decreased by 2% from 112,000 ounces in 2019 to 109,700 ounces in 2020 mainly due to lower yield (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures).

At Cerro Corona in Peru, copper sales decreased by 23% from 31,452 tonnes in 2019 to 24,114 tonnes in 2020, while gold sales decreased by 25% from 159,706 ounces in 2019 to 120,176 ounces in 2020 both mainly explained by lower head grades processed as lower grade stockpiles were used to supplement fresh ore mined due to the Covid-19 restrictions. As a consequence, gold equivalent sales decreased by 31% from 296,900 ounces in 2019 to 205,500 ounces in 2020 mainly due to lower gold and copper grades processed, together with a lower price factor. The price factor was 3.5 in 2020 compared to 4.4 in 2019. It is estimated that Cerro Corona lost approximately 46,000 ounces due to Covid-19 related stoppages and 22,000 ounces due to the lower price factor, partially offset by 10 additional production days as a result of the change in the production calendar in 2020.

At the Australian operations, gold sales at St Ives increased by 8% from 363,300 ounces in 2019 to 393,800 ounces in 2020 with an 8% increase in tonnes milled, partially offset by a 4% decrease in yield. The higher tonnes milled were mainly due to the 10 additional production days as a result of the change in the production calendar. At Agnew, gold sales increased by 6% from 219,600 ounces in 2019 to 233,500 ounces in 2020 due to increased ore tonnes processed mainly due to the 10 additional production days as a result of the change in the production calendar. At Granny Smith, gold sales decreased by 3% from 274,800 ounces in 2019 to 265,200 ounces in 2020 due to 2% reduction in tonnes milled compared to 2019. At Gruyere, gold sales increased by 280% from 33,700 ounces in 2019 to 128,000 in 2020. Production commenced in July 2019, with commercial levels of production achieved by the end of September 2019.

### Cost of sales

Cost of sales, which comprises cost of sales before gold inventory change and amortisation and depreciation, gold inventory change and amortisation and depreciation, increased by 6% from US\$2,034 million in 2019 to US\$2,150 million in 2020. The reasons for this increase are described below.

#### Cost of sales before gold inventory change and amortisation and depreciation

Cost of sales before gold inventory change and amortisation and depreciation increased by 6% from US\$1,467 million in 2019 to US\$1,555 million in 2020.

At South Deep in South Africa, cost of sales before gold inventory change and amortisation and depreciation increased by 5% from R3,556 million (US\$246 million) in 2019 to R3,722 million (US\$227 million) in 2020. This increase of R166 million was mainly due to increased volumes mined and processed as well as inflationary increases.

At the Ghanaian operations (excluding Asanko), cost of sales before gold inventory change and amortisation and depreciation increased by 10% from US\$480 million in 2019 to US\$528 million in 2020. At Tarkwa, cost of sales before gold inventory change and amortisation and depreciation decreased by 11% from US\$330 million in 2019 to US\$295 million in 2019 mainly due to a reduction in ore mined (3Mt) and operational waste tonnes mined (13Mt) as the focus was on capital waste stripping. At Damang, cost of sales before gold inventory change and amortisation and depreciation increased by 55% from US\$150 million in 2019 to US\$233 million in 2020 mainly due to a 10Mt increase in operational waste tonnes mined (capital waste tonnes decreased by 17Mt) following the intersection of the main orebody. At Asanko, cost of sales before gold inventory change and amortisation and depreciation increased by 20% from US\$89 million in 2019 to US\$107 million in 2020 mainly due to an increase in ore mined (1Mt) and operational waste tonnes mined (17Mt).

At Cerro Corona in Peru, cost of sales before gold inventory change and amortisation and depreciation decreased by 6% from US\$168 million in 2019 to US\$158 million in 2020 mainly due to a 4Mt decrease in operational tonnes mined.

At the Australian operations, cost of sales before gold inventory change and amortisation and depreciation increased by 13% from A\$822 million (US\$572 million) in 2019 to A\$931 million (US\$642 million) in 2020 mainly due to the inclusion of Gruyere for a full year in 2020 with the mine reaching commercial levels of production at the end of September 2019, increased costs of operating at depth at Granny Smith and increased underground volumes at St Ives. At St Ives, cost of sales before gold inventory change and amortisation and depreciation increased by 5% from A\$333 million (US\$232 million) in 2019 to A\$349 million (US\$241 million) in 2020 mainly due to increased volume mined at the underground mines, partially offset by decreased volume mined at the open pit as the transition to underground mining continued. At Agnew, cost of sales before gold inventory change and amortisation and depreciation decreased by 4% from A\$237 million (US\$165 million) in 2019 to A\$228 million (US\$157 million) in 2020 mainly due to reduced underground mining costs at Waroonga as mining activities transitioned to the Kath and Waroonga North ore bodies located higher in the mine. At Granny Smith, cost of sales before gold inventory change and amortisation and depreciation increased by 9% from A\$226 million (US\$157 million) in 2019 to A\$247 million (US\$170 million) in 2020. With the mining of deeper ore zones additional cost was incurred for paste fill, support and hauling. Furthermore, additional contractor labour cost and employee flight and accommodation cost were incurred in 2020 due to the Covid-19 pandemic. Cost of sales before gold inventory change and amortisation and depreciation for Gruyere increased by 282% from A\$28 million (US\$19 million) in 2019 to A\$107 million (US\$73 million) in 2020. Gold production at Gruyere commenced in July 2019, with commercial production achieved by the end of September 2019. Net costs after gold sales prior to commercial levels of production were capitalised.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Gold inventory change

The gold inventory credit to costs increased by 53% from US\$43 million in 2019 to US\$66 million in 2020.

At South Deep, the gold inventory credit to costs of R54 million (US\$4 million) in 2019 compared with a charge to costs of R29 million (US\$2 million) in 2020, due to a buildup of gold in circuit in 2020 compared with a drawdown of gold in circuit at the end of 2019.

At Tarkwa, the gold inventory credit to costs of US\$14 million in 2019 compared with a charge to costs of US\$2 million in 2020. In 2020, Tarkwa supplemented ore feed to the plant with lower grade stockpile material. In 2019, higher ore volumes were mined and more medium grade ore was stockpiled.

At Damang, the gold inventory credit to costs increased by 578% from US\$9 million in 2019 to US\$61 million in 2020, due to more lower grade ore added to the stockpile in 2020 compared to 2019.

At Asanko, the gold inventory charge to costs of US\$2 million in 2019 compared with a credit to costs of US\$13 million in 2020, due to a buildup of stockpiles in 2020 as a result of additional lower grade ore tonnes mined.

At Cerro Corona, the gold inventory credit to costs decreased by 33% from US\$6 million in 2019 to US\$4 million in 2020, both due to a lower buildup of stockpiles in line with the new life extension plan in which ore will be stockpiled for the first few years until the in-pit tailings process commences.

At St Ives, the credit to costs increased by 150% from A\$4 million (US\$3 million) in 2019 to A\$10 million (US\$7 million) in 2020, both due to a buildup of stockpiles.

At Agnew, the credit to costs of A\$4 million (US\$3 million) in 2019 compared with a charge to costs of A\$8 million (US\$5 million) in 2020, due to a buildup of stockpiles in 2019 compared to a drawdown of stockpiles in 2020.

At Granny Smith, the charge to costs of A\$1 million (US\$nil) in 2019 compared to a credit to costs of A\$5 million (US\$3 million) in 2020, due to a drawdown of stockpiles in 2019 compared to a buildup of stockpiles in 2020.

At Gruyere, the credit to costs decreased by 100% from A\$8 million (US\$5 million) in 2019 to A\$nil (US\$nil) in 2020. This was due to ore tonnes mined being in line with tonnes processed in 2020 compared to a buildup of stockpiles in 2019 while construction was completed.

### Amortisation and depreciation

Amortisation and depreciation is calculated on the units-of-production method and is based on current gold production as a percentage of total expected gold production over the lives of the different mines based on proved and probable reserves.

The table on the following page depicts the changes from 31 December 2019 to 31 December 2020 for proved and probable managed gold and equivalent reserves and for the life-of-mine for each operation and the resulting impact on the amortisation charge in 2020. The amortisation in 2020 was based on the reserves as at 31 December 2019. The life-of-mine information is based on the operations' strategic plans, adjusted for proved and probable reserve balances. In basic terms, amortisation is calculated using the life-of-mine for each operation, which is based on: (1) the proved and probable reserves for the operation at the start of the relevant year (which are taken to be the same as at the end of the prior fiscal year and using reserves); and (2) the amount of gold produced by the operation during the year. The ore reserve statement as at 31 December 2020 became effective on 1 January 2021.

	Proved and probable mineral reserves as of			Life-of-mine		Amortisation for the year ended	
	31 December 2020 '000oz	31 December 2019 '000oz	31 December 2018 '000oz	31 December 2020 years	31 December 2019 years	31 December 2020 US\$ million	31 December 2019 US\$ million
<b>South Africa region</b>							
South Deep <sup>1</sup>	34,800	32,800	32,800	86	75	29.1	32.9
<b>West Africa region</b>							
Tarkwa <sup>2</sup>	6,100	5,900	5,800	14	14	168.2	181.8
Damang <sup>3</sup>	1,000	1,300	1,600	5	6	75.6	53.9
<b>South America region</b>							
Cerro Corona <sup>4</sup>	2,586	3,000	3,400	10	13	77.6	92.6

<b>Australia region</b>							
St Ives	2,700	2,300	1,700	8	9	113.4	105.0
Agnew	900	800	600	5	4	65.6	62.9
Granny Smith	2,200	2,100	2,200	10	13	61.2	55.4
Gruyere <sup>5</sup>	1,700	1,800	1,900	9	11	58.5	14.5
<b>Corporate and other</b>	—	—	—	—	—	12.0	11.0
<b>Total reserves<sup>6</sup></b>	<b>56,035</b>	<b>54,049</b>	<b>54,049</b>			<b>661.3</b>	<b>610.0</b>

<sup>1</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, 90.8%, 90.7% and 90.5% of mineral reserves amounting to 29.772 million ounces, 29.763 million ounces and 31.538 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to future non-controlling shareholders in the South Deep operation in terms of the South Deep BEE transaction.

<sup>2</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, 90% of mineral reserves amounting to 5.200 million ounces, 5.305 million ounces and 5.486 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Tarkwa operation.

<sup>3</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, 90% of mineral reserves amounting to 1.454 million ounces, 1.214 million ounces and 0.928 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Damang operation. Damang has commenced studies on a further Damang pit cutback, which has the potential to extend the life-of-mine beyond 2025 by a further four years.

<sup>4</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, 99.53% of mineral reserves amounting to 3.342 million ounces, 2.984 million ounces and 2.574 million ounces of equivalent gold were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Cerro Corona operation.

<sup>5</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, mineral reserves at Gruyere represent the 50% portion attributable to Gold Fields only.

<sup>6</sup> As of 31 December 2018, 31 December 2019 and 31 December 2020, reserves of 50.258 million ounces, 52.384 million ounces and 52.061 million ounces of equivalent gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Ghanaian and Peruvian operations.

Amortisation and depreciation increased by 8% from US\$610 million in 2019 to US\$661 million in 2020.

At South Deep in South Africa, amortisation and depreciation remained flat at R476 million (2020: US\$29 million and 2019: US\$33 million).

At the Ghanaian operations (excluding Asanko), amortisation and depreciation increased by 3% from US\$236 million in 2019 to US\$244 million in 2020. Tarkwa decreased by 8% from US\$182 million in 2019 to US\$168 million in 2020 mainly due to lower ounces mined. Damang increased by 41% from US\$54 million in 2019 to US\$76 million in 2020 mainly due to the higher ounces mined in the Damang Pit Cutback in 2020.

At Cerro Corona in Peru, amortisation and depreciation decreased by 16% from US\$93 million in 2019 to US\$78 million in 2020. This decrease was mainly due to lower ounces mined.

At the Australian operations, amortisation and depreciation increased by 27% from A\$342 million (US\$238 million) in 2019 to A\$433 million (US\$299 million) in 2020. At St Ives, amortisation and depreciation increased by 9% from A\$151 million (US\$105 million) in 2019 to A\$165 million (US\$113 million) in 2020 mainly due to increased ounces mined at the Hamlet and Invincible underground mines. At Agnew, amortisation and depreciation increased by 6% from A\$90 million (US\$63 million) in 2019 to A\$95 million (US\$66 million) in 2020 mainly due to increased amortisation on the power facility, gas pipeline and camp as a result of a full year depreciation included in 2020. At Granny Smith, amortisation and depreciation increased by 11% from A\$80 million (US\$55 million) in 2019 to A\$89 million (US\$61 million) in 2020 mainly due to an increased cost base with a lower reserve base at the Wallaby underground mine. At Gruyere, amortisation and depreciation increased by 305% from A\$21 million (US\$15 million) in 2019 to A\$85 million (US\$59 million) in 2020. Gold production commenced in July 2019, with commercial levels of production achieved by the end of September 2019.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### All-in sustaining and total all-in costs

The following table sets out for each operation and the Group, total gold sales in ounces, all-in sustaining costs and total all-in costs, net of by-product revenue, in US\$/oz for 2020 and 2019:

<i>Figures in thousands unless otherwise stated</i>	2020			2019		
	Gold only ounces sold	All-in sustaining costs – US\$/oz	Total all-in costs – US\$/oz	Gold only ounces sold	All-in sustaining costs – US\$/oz	Total all-in costs – US\$/oz
South Deep	226.9	1,237	1,260	222.1	1,259	1,259
<b>South African operation</b>	<b>226.9</b>	<b>1,237</b>	<b>1,260</b>	222.1	1,259	1,259
Tarkwa	526.3	1,017	1,017	519.1	958	958
Damang	223.0	1,008	1,035	208.4	809	1,147
Asanko <sup>1</sup>	109.7	1,114	1,316	112.0	1,112	1,214
<b>Ghanaian operations</b>	<b>858.9</b>	<b>1,027</b>	<b>1,060</b>	839.5	942	1,039
Cerro Corona <sup>2</sup>	120.2	484	715	159.7	381	472
<b>Peruvian operation</b>	<b>120.2</b>	<b>484</b>	<b>715</b>	159.7	381	472
St Ives	393.8	843	873	363.3	818	963
Agnew	233.5	1,017	1,053	219.6	967	1,152
Granny Smith	265.2	938	1,010	274.8	752	922
Gruyere – 50%	128.0	921	931	33.7	683	684
<b>Australian operations</b>	<b>1,020.5</b>	<b>917</b>	<b>957</b>	891.4	829	986
Total Group (including Asanko)	2,226.4	977	1,079	2,112.6	897	1,064
<b>Total Group (excluding Asanko)</b>	<b>2,116.7</b>	<b>970</b>	<b>1,067</b>	2,000.6	885	1,056

All-in costs are calculated in accordance with the World Gold Council Industry standard. Refer to pages 63 to 71 for detailed calculations and discussion of AIC.

<sup>1</sup> Equity-accounted joint venture.

<sup>2</sup> Gold sold at Cerro Corona excludes copper equivalents of 137,194 ounces in 2019 and 85,324 ounces in 2020.

Figures above may not add as they are rounded independently.

### AISC and AIC (NEW INTERPRETATION)

AISC net of by-product revenues (including Asanko) increased by 9% from US\$897 per ounce of gold in 2019 to US\$977 per ounce of gold in 2020, mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC net of by-product revenues (including Asanko) increased by 1% from US\$1,064 per ounce of gold in 2019 to US\$1,079 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

AISC net of by-product revenues (excluding Asanko) increased by 10% from US\$885 per ounce of gold in 2019 to US\$970 per ounce of gold in 2020, mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalties (due to higher gold price realised), partially offset by higher gold sold. AIC net of by-product revenues (excluding Asanko) increased by 1% from US\$1,056 per ounce of gold in 2019 to US\$1,067 per ounce of gold in 2020 due to higher cost of sales before amortisation and depreciation, higher sustaining capital expenditure and higher royalties, partially offset by higher gold sold and lower non-sustaining capital expenditure.

At South Deep in South Africa, all-in sustaining costs increased by 11% from R585,482 per kilogram (US\$1,259 per ounce) in 2019 to 651,514 per kilogram (US\$1,237 per ounce) in 2020 due to higher cost of sales before amortisation and depreciation and higher sustaining capital expenditure, partially offset by higher gold sold. The total all-in cost increased by 13% from R585,482 per kilogram (US\$1,259 per ounce) in 2019 to R663,635 per kilogram (US\$1,260 per ounce) in 2020 due to the same reasons as for all-in sustaining costs as well as higher non-sustaining capital expenditure.

At the Ghanaian operations, all-in sustaining costs increased by 9% from US\$942 per ounce in 2019 to US\$1,027 per ounce in 2020 and total all-in cost increased by 2% from US\$1,039 per ounce in 2019 to US\$1,060 per ounce in 2020. At Tarkwa,

all-in sustaining costs and total all-in costs increased by 6% from US\$958 per ounce in 2019 to US\$1,017 per ounce in 2020 due to higher royalty tax (related to the higher gold price received) and higher capital expenditure, partially offset by higher gold sold and lower cost of sales before amortisation and depreciation. At Damang, all-in sustaining costs increased by 25% from US\$809 per ounce in 2019 to US\$1,008 per ounce in 2020 due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received), partially offset by higher gold sold. All-in costs decreased by 10% from US\$1,147 per ounce in 2019 to US\$1,035 per ounce in 2020 due to lower non-sustaining capital and higher gold sold partially offset by higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received). At Asanko, all-in sustaining costs increased marginally from US\$1,112 in 2019 to US\$1,114 in 2020. All-in costs increased by 8% from US\$1,214 in 2019 to US\$1,316 in 2020 due to an increase in cost of sales before amortisation and depreciation (driven by the 44% higher tonnes mined in 2020) and higher non-sustaining capital.

At Cerro Corona in Peru, all-in sustaining costs increased by 27% from US\$381 per ounce in 2019 to US\$484 per ounce in 2020 mainly due to lower by-product credits as a result of lower copper sold, lower gold sold and additional Covid-19-related expenditure, partially offset by lower cost of sales before amortisation and depreciation and lower sustaining capital expenditure. All-in cost per ounce increased by 51% from US\$472 per equivalent ounce in 2019 to US\$715 per equivalent ounce in 2020 mainly due to the same reasons for all-in sustaining cost and higher non-sustaining capital. All-in cost per equivalent ounce increased by 38% from US\$810 per equivalent ounce in 2019 to US\$1,119 per equivalent ounce in 2020 due to lower equivalent ounces sold, partially offset by lower cost of sales before amortisation and depreciation and lower capital expenditure.

At the Australian operations, all-in sustaining costs increased by 12% from A\$1,192 per ounce (US\$829 per ounce) in 2019 to A\$1,331 per ounce (US\$917 per ounce) in 2020. All-in costs decreased by 2% from A\$1,418 per ounce (US\$986 per ounce) in 2019 to A\$1,388 per ounce (US\$957 per ounce) in 2020. At St Ives, all-in sustaining costs increased by 4% from A\$1,176 per ounce (US\$818 per ounce) in 2019 to A\$1,223 per ounce (US\$843 per ounce) in 2020 mainly due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received), partially offset by increased gold sold. All-in costs decreased by 9% from A\$1,385 per ounce (US\$963 per ounce) in 2019 to A\$1,266 per ounce (US\$873 per ounce) in 2020 mainly due to lower capital expenditure and increased gold sold, partially offset by higher cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received). At Agnew, all-in sustaining costs increased by 6% from A\$1,391 per ounce (US\$967 per ounce) in 2019 to A\$1,475 per ounce (US\$1,017 per ounce) in 2020 due to higher sustaining capital expenditure, higher cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received), partially offset by increased gold sold. All-in costs decreased by 8% from A\$1,656 per ounce (US\$1,152 per ounce) in 2019 to A\$1,528 per ounce (US\$1,053 per ounce) in 2020 due to lower capital expenditure and increased gold sold, partially offset by increased cost of sales before amortisation and depreciation and higher royalty tax (related to the higher gold price received). At Granny Smith, all-in sustaining costs increased by 26% from A\$1,081 per ounce (US\$752 per ounce) in 2019 to A\$1,360 per ounce (US\$938 per ounce) in 2020. With the mining of deeper ore zones additional cost was incurred for paste fill, support and hauling. Furthermore, additional contractor labour cost and employee flight and accommodation cost were incurred in 2020 due to the Covid-19 pandemic. In addition to the production cost increases, royalty tax was also higher as a result of the higher gold price received. The gold sold was lower and sustaining capital expenditure was higher. All-in costs increased by 11% from A\$1,325 per ounce (US\$922 per ounce) in 2019 to A\$1,465 per ounce (US\$1,010 per ounce) in 2020 mainly due to the same reasons for all-in sustaining cost, partially offset by lower non-sustaining capital. At Gruyere, all-in sustaining costs increased by 37% from A\$976 per ounce (US\$683 per ounce) in 2019 to A\$1,337 per ounce (US\$921 per ounce) in 2020 due to higher cost of sales before amortisation and depreciation and higher sustaining capital, partially offset by higher gold sold. All-in costs increased by 38% from A\$977 per ounce (US\$684 per ounce) in 2019 to A\$1,350 per ounce (US\$931 per ounce) in 2020 due to the same reasons as all-in sustaining costs.

### Investment income

Income from investments increased by 29% from US\$7 million in 2019 to US\$9 million in 2020. The increase was mainly due to higher cash balances in 2020.

The investment income in 2020 of US\$9 million comprised US\$1 million interest on monies invested in the South African rehabilitation trust fund and US\$8 million interest on other cash and cash equivalent balances.

The investment income in 2019 of US\$7 million comprised US\$1 million interest on monies invested in the South African rehabilitation trust fund and US\$6 million interest on other cash and cash equivalent balances.

Interest received on the South African rehabilitation trust fund remained flat at US\$1 million.

Interest on other cash balances increased by 33% from US\$6 million in 2019 to US\$8 million in 2020 mainly due to higher cash balances in 2020.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Finance expense

Finance expense increased by 25% from US\$102 million in 2019 to US\$127 million in 2020.

The finance expense of US\$127 million in 2020 comprised US\$11 million relating to the accretion of the environmental rehabilitation liability, US\$2 million relating to the unwinding of the silicosis provision, US\$22 million lease interest and US\$105 million on various Group borrowings, partially offset by borrowing costs capitalised of US\$13 million.

The finance expense of US\$102 million in 2019 comprised US\$12 million relating to the accretion of the environmental rehabilitation liability, US\$1 million relating to the unwinding of the silicosis provision, US\$18 million lease interest and US\$114 million on various Group borrowings, partially offset by borrowing costs capitalised of US\$43 million.

The environmental rehabilitation liability accretion expense decreased by 8% from US\$12 million in 2019 to US\$11 million in 2020.

The unwinding of the silicosis provision increased by 50% from US\$1 million in 2019 to US\$2 million in 2020 due to a change in the expected timing of the cash flows, as well as a decrease in the discount rate.

The interest expense on lease liability increased by 22% from US\$18 million in 2019 to US\$22 million in 2020 due to additional leases capitalised in 2020.

Below is an analysis of the components making up the interest on the various Group borrowings, stated on a comparative basis:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
Interest on borrowings to fund capital expenditure and operating costs at the South African operation	2	7
Interest on US\$1 billion notes issue	24	36
Interest on US\$500 million 5-year notes issue	27	16
Interest on US\$500 million 10-year notes issue	32	18
Interest on US\$100 million revolving senior secured credit facility	2	3
Interest on US\$150 million revolving senior secured credit facility	3	4
Interest on A\$500 million syndicated revolving credit facility	7	12
Interest on US\$1,290 million term loan and revolving credit facilities	-	15
Interest on US\$1,200 million term loan and revolving credit facilities	8	2
Other interest charges	-	1
	<b>105</b>	114

Interest on borrowings to fund capital expenditure and operating costs at the South African operation decreased by 71% from US\$7 million in 2019 to US\$2 million in 2020 due to total repayment of South African borrowings in 2019. The US\$2 million in 2020 relates to commitment fees incurred.

Interest on the US\$1 billion notes issue decreased by 33% from US\$36 million in 2019 to US\$24 million in 2020 due to the repayment of the US\$1 billion notes on 7 October 2020, the date of maturity of the notes.

On 9 May 2019, Gold Fields successfully concluded the raising of two new bonds, a US\$500 million five-year notes issue and a US\$500 million 10-year notes issue, raising a total of US\$1 billion. Interest on the US\$500 million five-year notes issue and US\$500 million 10-year notes issue increased by 69% and 78% from US\$16 million and US\$18 million in 2019 to US\$27 million and US\$32 million in 2020, respectively. The increase is due to interest paid for 12 months in 2020 compared to eight months in 2019.

Interest on the US\$100 million term revolving senior secured credit facility decreased by 50% from US\$3 million in 2019 to US\$2 million in 2020. The facility was repaid in full in 2019 and the expense in 2020 relates to commitment fees.

Interest on the US\$150 million revolving senior secured credit facility decreased by 25% from US\$4 million in 2019 to US\$3 million in 2020.

Interest on the A\$500 million syndicated revolving credit facility decreased by 42% from US\$12 million in 2019 to US\$7 million in 2020 due to lower borrowings in 2020.

Interest on the US\$1,290 million term loan and revolving credit facilities decreased by 100% from US\$15 million in 2019 to US\$nil in 2020 due to repayment of the facilities in 2019.

Interest on the US\$1,200 million term loan and revolving credit facilities increased by 300% from US\$2 million in 2019 to US\$8 million in 2020 due to drawdowns of the facilities in 2020.

Capitalised interest decreased by 70% from US\$43 million in 2019 to US\$13 million in 2020 due to capitalisation of borrowing costs ceasing for both the Damang reinvestment project in 2020 and the Gruyere project in 2019, partially offset by capitalised interest on the Salares Norte project in 2020. The Damang reinvestment project reached commercial levels of production in 2020 and the Gruyere project was in production for the full 2020 financial year. The Salares Norte project was approved by the Board and capital expenditure commenced in April 2020, resulting in capitalised interest from that date. The interest was capitalised in terms of IAS 23 Borrowing Costs. IAS 23 requires capitalisation of borrowing costs whenever general or specific borrowings are used to finance qualifying projects. The qualifying projects in 2020 were the Damang reinvestment project (US\$12 million) and the Salares Norte project (US\$1 million). The qualifying projects in 2019 were the Damang reinvestment project (US\$20 million) and the Gruyere project (US\$23 million). An average interest capitalisation rate of 4.4% (2019: 6.2%) was applied.

### Loss on financial instruments

The loss on financial instruments increased marginally from US\$238 million in 2019 to US\$239 million in 2020.

The loss on financial instrument of US\$239 million in 2020 comprised:

	United States Dollar		
	Unrealised (losses)/gains and prior year mark-to-market reversals	Realised (losses)/ gains	Total (losses)/ gains
<i>Figures in millions unless otherwise stated</i>			
South Deep gold hedge	11	(96)	(85)
Ghana gold hedge	36	(114)	(78)
Ghana oil hedge	(10)	(7)	(17)
Peru copper hedge	(14)	–	(14)
Australia gold hedge	71	(201)	(130)
Australia oil hedge	(6)	(3)	(9)
Salares Norte foreign currency hedge	86	5	91
Maverix warrants – gain on fair value	1	–	1
Other	2	–	2
	<b>177</b>	<b>(416)</b>	<b>(239)</b>

The loss on financial instrument of US\$238 million in 2019 comprised:

	United States Dollar		
	Unrealised (losses)/gains and prior year mark-to-market reversals	Realised (losses)/ gains	Total (losses)/ gains
<i>Figures in millions unless otherwise stated</i>			
South Deep gold hedge	(11)	(15)	(26)
Ghana gold hedge	(39)	2	(37)
Ghana oil hedge	(2)	5	3
Australia gold hedge	(66)	(113)	(179)
Australia oil hedge	(1)	3	2
Australia foreign currency hedge	7	(14)	(7)
Maverix warrants – gain on fair value	4	–	4
Gain on fair value on disposal of Maverix	3	–	3
Other	(1)	–	(1)
	<b>(106)</b>	<b>(132)</b>	<b>(238)</b>

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### South Deep gold hedge

Between October 2018 and January 2019, South Deep entered into cash-settled average rate forwards for a total of 112,613 ounces for the period June 2019 to December 2019 at an average strike rate of R617,000 per kilogram.

In June 2019, a total of 200,000 ounces of the expected production for 2020 for South Deep was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars (100,000 ounces) and average rate forwards (100,000 ounces). The average strike price is R660,000 per kilogram on the floor and R727,000 per kilogram on the cap. The average strike price is R681,400 per kilogram on the forwards.

At 31 December 2020, the mark-to-market value on the hedge was Rnil (US\$nil) (2019: negative R176 million (US\$13 million) as all instruments had matured with a realised loss of R1,563 million (US\$96 million) (2019: R220 million (US\$15 million), partially offset by an unrealised gain and prior year mark-to-market reversals of R176 million (US\$11 million) (2019: unrealised loss of R153 million (US\$11 million)) for the year ended 31 December 2020.

### Ghana gold hedge

In January 2018 and April 2018, a total of 488,900 ounces of the expected production for the Ghanaian region was hedged for the period January 2018 to December 2018 using zero-cost collars. The average strike prices are US\$1,300 per ounce on the floor and US\$1,418 per ounce on the cap.

In June 2019, a total of 275,000 ounces of the expected production for 2020 for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero-cost collars (175,000 ounces) and average rate forwards (100,000 ounces). The average strike prices are US\$1,364 per ounce on the floor and US\$1,449 per ounce on the cap. The average strike price on the forwards is US\$1,382 per ounce.

Subsequent to 30 June 2019, 100,000 ounces of the expected production for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars. The average strike prices are US\$1,400 per ounce on the floor and US\$1,557 per ounce on the cap.

At 31 December 2020, the mark-to market value on the hedge was US\$nil (2019: negative US\$36 million) as all the instruments matured, with a realised loss of US\$114 million (2019: a realised gain of US\$2 million), partially offset by an unrealised gain and prior year mark-to-market reversals of US\$36 million (2019: a unrealised loss of US\$39 million) for the year ended 31 December 2020.

### Ghana oil hedge

In May 2017 and June 2017, the Ghanaian operations entered into fixed price ICE Gasoil cash-settled swap transaction for a total of 125.8 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$457.2 per metric tonne (equivalent US\$61.4 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenure was US\$49.8 per barrel.

In June 2019, fixed price ICE Gasoil cash-settled swap transactions were entered into for a total of 123.2 million litres of diesel for the period January 2020 to December 2022 based on 50% of usage over the specified period. The average swap price is US\$575 per metric tonne (equivalent to US\$75.8 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenor was US\$59.2 per barrel.

At 31 December 2020, the mark-to-market value on the hedge was a negative US\$10 million (2019: US\$nil) with a realised loss of R7 million (2019: a gain of US\$5 million) and an unrealised loss of US\$10 million (2019: US\$2 million).

### Peru copper hedge

In November 2017, zero-cost collars were entered into for the period January 2018 to December 2018. A total volume of 29,400 tonnes was hedged, at an average floor price of US\$6,600 per tonne and an average cap price of US\$7,431 per tonne.

In October and November 2020, a total of 24,000 metric tonnes of copper were hedged using cash-settled zero cost collars. The hedges are for the period January 2021 to December 2021 and represent the total planned production for 2021. The average strike price is US\$6,525 per metric tonnes on the floor and US\$7,382 per metric tonnes on the cap.

At 31 December 2020 the mark-to-market valuation of the hedge was a negative US\$14 million (2019: US\$nil), with a realised gain of US\$nil (2019: US\$nil million), offset by an unrealised loss of US\$14 million (2019: US\$nil).

### Australia gold hedge

In February 2018, the Australian operations entered into Asian swaps (Asian swaps are options where the payoff is determined by the average monthly gold price over the option period) for the period June 2018 to December 2018 for a total of 221,000 ounces of gold. The average strike price on the swaps was A\$1,714 per ounce. In March 2018, the Australian operations entered into zero-cost collars for the period April 2018 to December 2018 for a total of 452,800 ounces of gold. The average strike prices are A\$1,703 per ounce on the floor and US\$1,767 per ounce on the cap.

In December 2018, additional Asian swaps were entered into for the period January 2019 to December 2019 for a notional 283,000 ounces of gold at an average strike price of A\$1,751 per ounce. In December 2018, additional zero-cost collars were executed for the period January 2019 to December 2019 for a notional 173,000 ounces of gold with a strike price on the floor at A\$1,720 per ounce and the strike price on the cap at A\$1,789 per ounce.

In January 2019, zero-cost collars were executed for the period January 2019 to December 2019 for a notional 456,000 ounces of gold with a strike price on the floor at A\$1,800 per ounce and the strike price on the cap at A\$1,869 per ounce.

In June 2019, a total of 480,000 ounces of the expected production for 2020 for the Australian region was hedged for the period January 2020 to December 2020 using cash-settled zero-cost collars (270,000 ounces) and average rate forwards (210,000 ounces). The average strike prices are A\$1,933 per ounce on the floor and A\$2,014 on the cap. The average strike price on the forwards is A\$1,957 per ounce.

In the first six months of 2020, 400,000 ounces of the expected production for 2021 was hedged for the period January 2021 to December 2021 using bought puts. Between July and October 2020, an additional 600,000 ounces of the expected production for 2021 was hedged for the period January 2021 to December 2021 using bought puts. The average strike price of the total 1,000,000 ounces hedged is A\$2,190 per ounce.

At 31 December 2020, the mark-to-market value on the hedges was positive A\$36 million (US\$27 million) (2019: negative A\$112 million (US\$78 million)) with a realised loss of A\$292 million (US\$201 million) (2019: A\$163 million (US\$113 million)), partially offset by an unrealised gain and prior year mark-to-market reversals of A\$104 million (US\$71 million) (2019: unrealised loss of A\$93 million (US\$66 million)) for the year ended 31 December 2020.

#### **Australia oil hedge**

In May 2017 and June 2017, the Australian operations entered into fixed price Singapore 10ppm Gasoil cash-settled swap transactions for a total of 77.5 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$61.2 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenure was US\$49.9 per barrel.

In June 2019, fixed price Singapore 10ppm Gasoil cash-settled swap transactions were entered into for a total of 75.0 million litres of diesel for the period January 2020 to December 2022 based on 50% of usage over the specified period. The average swap price is US\$74.0 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenor was US\$57.4 per barrel.

At 31 December 2020, the mark-to-market value on the hedge was a negative A\$7 million (US\$5 million) (2019: a positive A\$1 million (US\$1 million)) with a realised loss of A\$5 million (US\$3 million) (2019: a realised gain of A\$5 million (US\$3 million)) and an unrealised loss of A\$8 million (A\$6 million) (2019: A\$1 million (US\$1 million)) for the year ended 31 December 2020.

#### **Australia foreign currency hedge**

In May 2018, the Australian operations entered into Australian Dollar/US Dollar average rate forwards for a total notional US\$96 million for the period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7517. In June 2018, further hedges were taken out for a total notional US\$60 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7330. In September 2018, further hedges were taken out for a total notional US\$100 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7182. In October 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$60 million at an average strike price of A\$/US\$ 0.7075. In December 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$50 million at an average strike price of A\$/US\$ 0.715.

At 31 December 2020, the mark-to-market value on the hedges was A\$nil (US\$nil) (2019: US\$nil (US\$nil)) with a realised loss of A\$nil (US\$nil) (2019: A\$22 million (US\$14 million)), partially offset by an unrealised gain of A\$nil (US\$nil) (2019: A\$12 million (US\$7 million)) for the year ended 31 December 2020.

#### **Salares Norte**

In March 2020, a total notional amount of US\$544.5 million was hedged at a rate of CLP/US\$836.45 for the period July 2020 to December 2022.

At 31 December 2020, the mark-to-market value on the hedge was a positive US\$86 million (2019: US\$nil) with a realised gain of US\$5 million (2019: US\$nil) and an unrealised gain of US\$86 million (2019: US\$nil) for the year ended 31 December 2020.

#### **Foreign exchange gain/(loss)**

The foreign exchange gain of US\$9 million in 2020 compared with a loss of US\$5 million in 2019.

These gains or losses on foreign exchange related to the conversion of offshore cash holdings into their functional currencies. The exchange gain of US\$9 million in 2020 was mainly due to the weakening of the Ghanaian Cedi, while the loss of US\$5 million in 2019 was mainly due to the release of the foreign exchange reserve on disposal of subsidiary.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Other costs, net

Other costs, net decreased by 82% from US\$68 million in 2019 to US\$12 million in 2020.

The costs in 2020 are mainly made up of:

- Social contributions and sponsorships of US\$14 million;
- Offshore structure costs of US\$14 million;
- Donations of US\$3 million made to various bodies in response to Covid-19;
- US\$5 million related to the capital raising in February 2020;
- Damang contract termination costs of US\$1 million; and
- Rehabilitation expense of US\$2 million as a result of changes in estimates relating to the provision for environmental rehabilitation costs recognised in profit or loss.

The above were partially offset by the following:

- US\$24 million income related to a submission of VAT claims for expenses incurred from 2010 to June 2020 at Salares Norte to the Chilean tax authority which become claimable from the commencement of construction in 2020.

The costs in 2019 are mainly made up of:

- Social contributions and sponsorships of US\$18 million;
- Offshore structure costs of US\$17 million;
- Loss on buy-back on notes of US\$5 million;
- Damang contract termination costs of US\$13 million; and
- Rehabilitation expense of US\$13 million as a result of changes in estimates relating to the provision for environmental rehabilitation costs recognised in profit or loss.

### Share-based payments

Gold Fields recognises the cost of share options granted (share-based payments) in terms of IFRS 2 *Share-based Payment*.

The Group grants share options and restricted shares to Executive Committee members (including regional Executive Committee members) under the Gold Fields Limited 2012 share plan amended. Gold Fields has adopted appropriate valuation models (Black-Scholes and Monte Carlo simulation) to fair value share-based payments. The value of the equity-settled instruments is determined at the grant date of the options and depending on the rules of the plan expensed on a straight-line basis over a three-year vesting period, adjusted for forfeitures as appropriate.

From 2018 onwards, only Executive Committee members (including regional Executive Committee members) receive awards under the Gold Fields Limited 2012 share plan amended, while senior and middle management receive awards under the revised long-term incentive plan ("LTIP").

Share-based payments decreased by 29% from US\$21 million in 2019 to US\$15 million in 2020 mainly due to the awards from 2018 onwards being granted to the Executive Committee members only and the vesting of the 2020 awards in early 2020. The corresponding entry for the share-based payment expense was the share-based payment reserve within shareholders' equity.

### Long-term incentive plan expense

Gold Fields recognises the long-term incentive plan expense in terms of IAS 19 *Employee Benefits*.

On 1 March 2014, the Remuneration Committee approved the Gold Fields Limited long-term incentive plan ("LTIP"). The plan provided for Executive Directors, certain officers and employees to receive a cash award, conditional on the achievement of specified performance conditions relating to total shareholder return and free cash flow margin. The conditions were assessed over the performance cycle which runs over three calendar years. The expected timing of the cash outflows in respect of each grant was at the end of three years after the original award was made. The last award under this plan was made in 2015.

From 2018 onwards, Executive Committee members (including regional Executive Committee members) receive awards under the Gold Fields Limited 2012 share plan amended, while senior and middle management receive awards under the revised LTIP. The performance conditions of the revised LTIP are approved annually by the Remuneration Committee. The expected timing of the cash outflows in respect of each grant is at the end of three years after the original award was made.

The LTIP expense increased by 467% from US\$9 million in 2019 to US\$51 million in 2020 due to the current mark-to-market valuation of the plan reflecting current performance as well as the allocation in 2020.

## Exploration expense

The exploration expense decreased by 40% from US\$84 million in 2019 to US\$50 million in 2020.

United States Dollar

<i>Figures in millions unless otherwise stated</i>	2020	2019
Australia	17	30
Salares Norte	30	49
Peru	1	4
Exploration office costs	2	1
<b>Total exploration expense</b>	<b>50</b>	<b>84</b>

In 2020, Australia spent US\$50 million on exploration of which US\$17 million was expensed in the income statement.

In 2019, Australia spent US\$59 million on exploration of which US\$30 million was expensed in the income statement.

## Share of results of equity-accounted investees, net of taxation

Share of results of equity-accounted investees, net of taxation was a profit of US\$3 million in 2019 compared to a loss of US\$3 million in 2020.

During 2020, Gold Fields equity-accounted for Far South East Resources Incorporated ("FSE") and Asanko Gold Inc ("Asanko") (2019: FSE, Asanko and Maverix Metals Incorporated ("Maverix")).

FSE's share of results of equity-accounted investees, net of taxation increased marginally from a loss of US\$1 million in 2019 to a loss of US\$2 million in 2020.

Asanko's share of results of equity-accounted investees, net of taxation was a profit of US\$4 million in 2019 compared to a loss of US\$1 million in 2020. The loss of US\$1 million in 2020 comprised Gold Fields' share of Asanko's profits before impairment of US\$49 million, offset by impairment of mining assets at the Asanko Gold Mine of US\$50 million. The profit of US\$4 million in 2019 comprised only Asanko's share of profits. The increase in Asanko's profit before impairment is mainly due to the higher gold price in 2020. The share of results of equity-accounted investees – impairment of Asanko related to an impairment of US\$50m of the Asanko gold mine following the identification of an impairment trigger. Due to the re-evaluation of the geological modelling by our JV partner, Galiano, Gold Fields is not in a position to provide a reserve and resource estimate for Asanko as at 31 December 2020. Taking this into consideration, management has modelled various scenarios for the Asanko Life of Mine ("LOM") in order to determine their best estimates of the future cash flows of the Asanko gold mine. The various LoM scenario runs were undertaken in an attempt to model Asanko's future cash flows in the absence of a revised Resource and Reserve for 31 December 2020. These scenarios are based on the pre-feasibility study completed in 2019, in order to declare a Reserve at 31 December 2019, but were modified where appropriate to reflect prevailing circumstances.

Maverix's share of results of equity-accounted investees, net of taxation decreased from a profit of US\$0.4 million in 2019 to US\$nil in 2020. The decrease is due to the sale of Maverix during 2019 (refer below for further details).

## Profit on disposal of Maverix Metals Incorporated

Profit on disposal of Maverix Metals amounted to US\$15 million in 2019.

In line with its key strategic objective of paying down its debt, Gold Fields Limited disposed of its shareholding in Maverix during the year ended 31 December 2019. The sale of the shares, processed through a series of private market transactions, raised US\$67 million in cash. After the first transaction, Maverix no longer met the definition of an associate and it was reclassified as a listed investment. A profit on disposal of US\$15 million was recognised comprising a profit on disposal of associate of US\$34 million, partially offset by a loss on derecognition of the investment in Maverix designated at fair value through profit or loss of US\$19 million.

## Restructuring costs

Restructuring costs increased by 100% from US\$1 million in 2019 to US\$2 million in 2020. The cost in 2020 relates mainly to separation packages at St Ives and Tarkwa and the cost in 2019 relates mainly to separation packages at South Deep and Tarkwa.

## Silicosis settlement costs

Silicosis settlement costs reversal of US\$2 million in 2019 compared to US\$nil in 2020.

A consolidated application was brought against several South African mining companies, including Gold Fields, for certification of a class action on behalf of current or former mineworkers (and their dependants) who have allegedly contracted silicosis and/or tuberculosis while working for one or more of the mining companies listed in the application (refer to notes 25.2 and 35 of the consolidated financial statements for further details).

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

During 2019, reversal of costs of US\$2 million, related to a change in the expected timing of the cash flows and an increase in the discount rate.

### Impairment, net of reversal of impairment of investments and assets

Impairment, net of reversal of impairment of investments and assets was an impairment charge of US\$10 million in 2019 compared to a net reversal of impairment of US\$51 million in 2020.

#### United States Dollar

<i>Figures in millions unless otherwise stated</i>	2020	2019
Cerro Corona redundant assets	1	–
Damang drilling costs	10	–
Reversal of impairment – FSE	(62)	10
	<b>(51)</b>	10

The net reversal of impairment of US\$51 million in 2020 comprised of:

- net reversal of impairment of FSE of US\$62 million which is limited to previous impairments recognised. The reversal of impairment of FSE was based on the fair value less cost of disposal of the investment which was indirectly derived from the market value of Lepanto Consolidated Mining Company; partially offset by:
  - US\$1 million impairment of redundant assets at Cerro Corona; and
  - US\$10 million impairment of drilling costs at Damang. Based on technical and economic parameters of various studies, all assets related to the Amoanda-Tomento corridor were impaired.

The impairment charge of US\$10 million in 2019 related mainly to the net impairment of FSE. The impairment of FSE was based on the fair value less cost of disposal of the investment which was indirectly derived from the market value of Lepanto Consolidated Mining Company.

### Tarkwa expected credit loss

An expected credit loss provision of US\$29 million was raised against a receivable at 31 December 2020. The receivable relates to the sale of mining fleet to a contractor at Tarkwa as part of the transition to contractor mining.

### Profit on disposal of assets

Loss on disposal of assets of US\$nil million in 2020 compared to a profit of US\$1 million in 2019. The profit in 2019 related mainly to the sale of redundant assets at South Deep, Ghana and Australia.

### Royalties

Royalties increased by 42% from US\$74 million in 2019 to US\$105 million in 2020 and are made up as follows:

#### United States Dollar

<i>Figures in millions unless otherwise stated</i>	2020	2019
South Africa	2	2
Ghana	53	36
Peru	6	5
Australia	44	31
	<b>105</b>	74

The royalty in South Africa remained flat at US\$2 million.

The royalty in Ghana increased by 47% from US\$36 million in 2019 to US\$53 million in 2020 due to an increase in revenue in 2020, as well as a higher royalty rate on the sliding scale as a result of the higher gold price in 2020.

The royalty in Peru increased by 20% from US\$5 million in 2019 to US\$6 million in 2020 due to an increase in operating profit in 2020.

The royalty in Australia increased by 42% from US\$31 million in 2019 to US\$44 million in 2020 due to an increase in revenue in 2020.

## Mining and income tax

The mining and income tax charge increased by 146% from US\$176 million in 2019 to US\$433 million in 2020.

The table below indicates Gold Fields' effective tax rate in 2020 and 2019:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
Income and mining tax credit/(charge) (US\$ million)	<b>(433)</b>	(176)
Effective tax rate (%)	<b>36.8</b>	50.3

In 2020, the effective tax rate of 36.8% was higher than the maximum South African mining statutory tax rate of 34% mainly due to the tax effect of the following:

- US\$46 million adjustment to reflect the actual realised company tax rates in South Africa and offshore;
- US\$21 million recognised on reversal of FSE impairment;
- US\$1 million deferred tax on unremitted earnings at Tarkwa and Cerro Corona; and
- US\$13 million deferred tax assets recognised at Salares Norte.

The above were offset by the following tax effected charges:

- US\$5 million non-deductible share-based payments;
- US\$31 million non-deductible interest paid;
- US\$1 million of non-taxable share of results of equity-accounted investees, net of taxation;
- US\$6 million dividend withholding tax;
- US\$1 million of net non-deductible expenditure and non-taxable income;
- US\$8 million deferred tax movement on Peruvian Nuevo Sol devaluation against US Dollar;
- US\$6 million of various Peruvian non-deductible expenses; and
- US\$51 million deferred tax assets not recognised at Tarkwa and Damang.

In 2019, the effective tax rate of 50.3% was higher than the maximum South African mining statutory tax rate of 34% mainly due to the tax effect of the following:

- US\$18 million adjustment to reflect the actual realised company tax rates in South Africa and offshore;
- US\$1 million of non-taxable share of results of equity-accounted investees, net of taxation;
- US\$1 million non-taxable fair value gain on Maverix warrants; and
- US\$5 million non-taxable profit on disposal of Maverix.

The above were offset by the following tax effected charges:

- US\$24 million non-deductible charges comprising share-based payments (US\$7 million) and exploration expense (US\$17 million);
- US\$3 million recognised on impairment of FSE;
- US\$30 million non-deductible interest paid;
- US\$3 million dividend withholding tax;
- US\$11 million of net non-deductible expenditure and non-taxable income;
- US\$5 million deferred tax on unremitted earnings at Tarkwa and Cerro Corona;
- US\$7 million of various Peruvian non-deductible expenses; and
- US\$3 million deferred tax assets not recognised at Cerro Corona.

## Profit for the year

As a result of the factors discussed above, the profit increased by 326% from US\$175 million in 2019 to US\$745 million in 2020.

### Profit attributable to owners of the parent

Profit attributable to owners of the parent increased by 346% from US\$162 million in 2019 to US\$723 million in 2020.

### Profit attributable to non-controlling interests

Profit attributable to non-controlling interests increased by 69% from US\$13 million in 2019 to US\$22 million in 2019.

The non-controlling interest consists of Gold Fields Ghana Limited (Tarkwa) and Abooso Goldfields Limited (Damang) at 10% each at the end of 2020 and 2019, Gold Fields La Cima S.A. (Cerro Corona) at 0.47% at the end of 2020 and 2019 and Newshelf 899 (Proprietary) Limited (South Deep) at 3.57% at the end of 2020.

On 6 December 2020, per the South Deep BEE transaction an economic interest of 3.57% in the South Deep mine vested to the BEE non-controlling interest holders.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

The amount making up the non-controlling interest is shown below:

	2020	2019	2020	2019
	Non-controlling interest Effective*	Non-controlling interest Effective*	US\$ million	US\$ million
Gold Fields Ghana – Tarkwa	10.0%	10.0%	17	10
Abosso Goldfields – Damang	10.0%	10.0%	5	3
Gold Fields La Cima – Cerro Corona	0.47%	0.47%	–	–
Newshelf 899 – South Deep	0.78%	–	–	–
			<b>22</b>	<b>13</b>

\* Average for the year.

### Basic earnings per share

As a result of the above, Gold Fields earnings increased by 310% from US\$0.20 per share in 2019 to earnings of US\$0.82 per share in 2020.

### Normalised profit

Normalised profit is considered an important measure by Gold Fields of the profit realised by the Group in the ordinary course of operations. In addition, it forms the basis of the dividend pay-out policy. Normalised profit is defined as profit excluding gains and losses on foreign exchange, financial instruments and non-recurring items after taxation and non-controlling interest effect.

Normalised profit for the Group of US\$879 million or US\$1.00 per share in 2020 compared with US\$343 million or US\$0.42 per share in 2019.

Normalised profit reconciliation for the Group is calculated as follows:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
Profit for the year attributable to owners of the parent	723	162
Non-recurring items <sup>1</sup>	(34)	24
Tax effect of non-recurring items	(6)	(8)
Non-controlling interest effect of non-recurring items	(4)	(1)
Share of results of equity-accounted investees – Asanko impairment	50	–
(Gain)/loss on foreign exchange	(9)	5
Tax effect of gain on foreign exchange	2	–
Non-controlling interest effect of gain on foreign exchange	1	–
Loss on financial instruments	239	238
Tax effect of loss on financial instruments	(76)	(74)
Non-controlling interest effect of loss on financial instruments	(7)	(3)
<b>Normalised profit attributable to owners of the parent</b>	<b>879</b>	<b>343</b>

<sup>1</sup> Non-recurring items are considered unusual and not expected during regular business operations such as gains or loss on the sale of assets, impairment costs or reversal of impairments, restructuring costs, inventory write-offs, rehabilitation adjustments and others.

## RESULTS FOR THE PERIOD – YEARS ENDED 31 DECEMBER 2019 AND 31 DECEMBER 2018

Profit/(loss) attributable to owners of the parent for the Group was a profit of US\$162 million (or US\$0.20 per share) in 2019 compared to a loss of US\$348 million (or US\$0.42 per share) for 2018.

The reasons for this increase are discussed below.

### Revenue

Revenue increased by 15% from US\$2,578 million in 2018 to US\$2,967 million in 2019. The increase in revenue of US\$389 million was due to the higher gold price and higher gold sold.

The average US Dollar gold price achieved by the Group increased by 11% from US\$1,252 per equivalent ounce in 2018 to US\$1,388 per equivalent ounce in 2019. The average Rand gold price increased by 24% from R531,253 per kilogram in 2018 to R659,111 per kilogram in 2019. The average Australian Dollar gold price increased by 18% from A\$1,694 per ounce in 2018 to A\$2,007 per ounce in 2019. The average US Dollar gold price for the Ghanaian operations (including Asanko) increased by 9% from US\$1,265 per ounce in 2018 to US\$1,384 per ounce in 2019 and the average US Dollar gold price for the Ghanaian operations (excluding Asanko) increased by 9% from US\$1,270 per ounce in 2018 to US\$1,387 per ounce in 2019. The average equivalent US Dollar gold price, net of treatment and refining charges, for Cerro Corona increased by 14% from US\$1,174 per equivalent ounce in 2018 to US\$1,344 per equivalent ounce in 2019. The average US Dollar/Rand exchange rate weakened by 10% from R13.20 in 2018 to R14.46 in 2019. The average Australian/US Dollar exchange rate weakened by 7% from A\$1.00 = US\$0.75 in 2018 to A\$1.00 = US\$0.70 in 2019.

Gold sales from operations (excluding Asanko) increased by 4% from 2,058,600 equivalent ounces in 2018 to 2,137,800 equivalent ounces in 2019. Gold sales at the South African operation increased by 32% from 5,220 kilograms (167,800 ounces) in 2018 to 6,907 kilograms (222,100 ounces) in 2019. Gold sales at the Ghanaian operations (excluding Asanko) increased by 3% from 705,700 ounces in 2018 to 727,500 ounces in 2019. Gold equivalent sales at the Peruvian operation (Cerro Corona) decreased by 1% from 299,100 equivalent ounces in 2018 to 296,900 equivalent ounces in 2019. At the Australian operations, gold sales increased by 1% from 885,900 ounces in 2018 to 891,400 ounces in 2019. As a general rule, Gold Fields sells all the gold it produces.

	2019			2018		
	Revenue US\$ million	Gold sold '000oz	Gold produced '000oz	Revenue US\$ million	Gold sold '000oz	Gold produced '000oz
South Deep	314.8	222.1	222.1	210.1	167.8	157.1
Tarkwa	720.4	519.1	519.1	666.9	524.9	524.9
Damang	288.3	208.4	208.4	229.0	180.8	180.8
Asanko <sup>1</sup>	153.3	112.0	113.0	54.9	45.9	44.5
Cerro Corona	399.0	296.9	292.7	351.0	299.1	314.1
St Ives	505.0	363.3	370.6	464.7	367.0	366.9
Agnew	304.6	219.6	219.4	301.1	238.5	239.1

Gruyere – 50%	51.2	33.7	49.5	–	–	–
Total Group (including Asanko)	3,120.4	2,249.8	2,269.5	2,632.7	2,104.5	2,107.8
Total Group (excluding Asanko)	2,967.1	2,137.8	2,156.5	2,577.8	2,058.6	2,063.2

<sup>1</sup> Equity-accounted joint venture. Included above for information only, not included in revenue for the Group.

At South Deep in South Africa, gold sales increased by 32% from 5,220 kilograms (167,800 ounces) in 2018 to 6,907 kilograms (222,100 ounces) in 2019 due to an increase in both volumes and grade mined.

At the Ghanaian operations, gold sales at Tarkwa decreased by 1% from 524,900 ounces in 2018 to 519,100 ounces in 2019. Damang's gold sales increased by 15% from 180,800 ounces in 2018 to 208,400 ounces in 2019 mainly due to higher grade and tonnes treated. Gold sales at Asanko amounted to 45,900 ounces for the five months ended December 2018 compared to 112.0 ounces for the 12 months ended December 2019 (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures).

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

At Cerro Corona in Peru, copper sales increased by 2% from 30,742 tonnes in 2018 to 31,452 tonnes in 2019 mainly due to timing of shipments. Gold sales increased by 13% from 141,041 ounces in 2018 to 159,706 ounces in 2019 due to higher gold production and timing of shipments. Gold equivalent sales decreased by 1% from 299,100 ounces in 2018 to 296,900 ounces in 2019 mainly due to lower copper/gold price ratio.

At the Australian operations, gold sales at St Ives decreased by 1% from 367,000 ounces in 2018 to 363,300 ounces in 2019. At Agnew, gold sales decreased by 8% from 238,500 ounces in 2018 to 219,600 ounces in 2019 due to decreased grade of ore mined and processed. At Granny Smith, gold sales decreased by 2% from 280,500 ounces in 2018 to 274,800 ounces in 2019 due to a decrease in tonnes mined and processed. Gruyere commenced production during 2019, with first gold produced in June 2019 and sold in July 2019. Commercial levels of production were achieved at the end of September, with gold sold prior to this date being capitalised to the construction capital. Gold sales for Gruyere amounted to 33,700 ounces for the three months (October to December 2019) in which Gruyere was in commercial levels of production.

### Cost of sales

Cost of sales, which comprises cost of sales before gold inventory change and amortisation and depreciation, gold inventory change and amortisation and depreciation, decreased marginally from US\$2,043 million in 2018 to US\$2,034 million in 2019. The reasons for this decrease are described below.

#### Cost of sales before gold inventory change and amortisation and depreciation

Cost of sales before gold inventory change and amortisation and depreciation increased by 5% from US\$1,391 million in 2018 to US\$1,467 million in 2019.

At South Deep in South Africa, cost of sales before gold inventory change and amortisation and depreciation increased by 3% from R3,459 million (US\$262 million) in 2018 to R3,556 million (US\$246 million) in 2019. This increase of R97 million was mainly due to higher production.

At the Ghanaian operations (excluding Asanko), cost of sales before gold inventory change and amortisation and depreciation increased by 9% from US\$442 million in 2018 to US\$480 million in 2019. At Tarkwa, cost of sales before gold inventory change and amortisation and depreciation increased by 10% from US\$299 million in 2018 to US\$330 million in 2019 due to higher mining costs in line with higher operational tonnes mined. At Damang, cost of sales before gold inventory change and amortisation and depreciation increased by 4% from US\$144 million in 2018 to US\$150 million in 2019 mainly due to higher operating tonnes mined. At Asanko, cost of sales before gold inventory change and amortisation and depreciation amounted to US\$42 million for the five months ended December 2018 compared to US\$89 million for the 12 months ended December 2019 (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian regional figures).

At Cerro Corona in Peru, cost of sales before gold inventory change and amortisation and depreciation increased by 5% from US\$160 million in 2018 to US\$168 million in 2019. The higher cost was due to higher process plant maintenance cost due to ageing and ore hardness, higher workers' participation due to higher profit and higher labour expenses resulting from the close-out of the union labour agreement.

At the Australian operations, cost of sales before gold inventory change and amortisation and depreciation increased by 17% from A\$705 million (US\$527 million) in 2018 to A\$822 million (US\$572 million) in 2019. At St Ives, cost of sales before gold inventory change and amortisation and depreciation increased by 24% from A\$269 million (US\$201 million) in 2018 to A\$333 million (US\$232 million) in 2019 mainly due to increased mining cost as a result of increased ore tonnes mined at Invincible underground mine and Neptune open pit and increased processing maintenance cost. At Agnew, cost of sales before gold inventory change and amortisation and depreciation increased by 11% from A\$214 million (US\$160 million) in 2018 to A\$237 million (US\$165 million) in 2019 mainly due to increased mining cost at Waroonga as a result of increased tonnes mined. At Granny Smith, cost of sales before gold inventory change and amortisation and depreciation increased by 1% from A\$223 million (US\$166 million) in 2018 to A\$226 million (US\$157 million) in 2019. Cost of sales before gold inventory change and amortisation and depreciation for Gruyere amounted to A\$28 million (US\$19 million) for the three months (October to December 2019) in which Gruyere was in commercial levels of production.

### Gold inventory change

The gold inventory credit to costs of US\$43 million in 2019 compared with US\$16 million in 2018.

At South Deep, the gold inventory credit to costs of R54 million (US\$4 million) in 2019 compared with a charge to costs of R127 million (US\$10 million) in 2018, due to a buildup of gold in circuit in 2019 compared with a drawdown of gold in circuit at the end of 2018.

At Tarkwa, the gold inventory credit to costs of US\$14 million in 2019 compared with a charge to costs of US\$10 million in 2018. In 2018 more lower grade ore was stockpiled and medium grade ore was processed. In 2019, higher ore volumes were mined and more medium grade ore was stockpiled compared to 2018.

At Damang, the gold inventory credit to costs of US\$9 million in 2019 compared with US\$19 million in 2018, due to a lower buildup of stockpiles in 2019 compared to 2018.

At Asanko, the gold inventory charge to costs of US\$2 million for the 12 months ended December 2019 compared with a credit to costs of US\$4 million for the five months ended December 2018 (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures).

At Cerro Corona, the gold inventory credit to costs remained flat at US\$6 million in 2019, due to a continued buildup of stockpiles in line with the new life extension plan in which ore will be stockpiled for the first few years until the in-pit tailings process commences.

At St Ives, the credit to costs of A\$4 million (US\$3 million) in 2019 compared with A\$20 million (US\$15 million) in 2018, both due to a buildup of stockpiles.

At Agnew, the credit to costs of A\$4 million (US\$3 million) in 2019 compared with a charge to costs of A\$2 million (US\$2 million) in 2018, due to a buildup of stockpiles in 2019 compared to a drawdown of stockpiles in 2018.

At Granny Smith, the charge to costs of A\$1 million (US\$nil) in 2019 compared to A\$3 million (US\$2 million) in 2018, both due to a drawdown of stockpiles.

At Gruyere, the credit to costs amounted to A\$8 million (US\$5 million) for the three months (October to December 2019) in which Gruyere was in commercial levels of production. This was due to a buildup of gold in circuit.

### Amortisation and depreciation

Amortisation and depreciation is calculated on the units-of-production method and is based on current gold production as a percentage of total expected gold production over the lives of the different mines based on proved and probable reserves.

The table on the following page depicts the changes from 31 December 2018 to 31 December 2019 for proved and probable managed gold and equivalent reserves and for the life-of-mine for each operation and the resulting impact on the amortisation charge in 2019. The amortisation in 2019 was based on the reserves as at 31 December 2018. The life-of-mine information is based on the operations' strategic plans, adjusted for proved and probable reserve balances. In basic terms, amortisation is calculated using the life-of-mine for each operation, which is based on: (1) the proved and probable reserves for the operation at the start of the relevant year (which are taken to be the same as at the end of the prior fiscal year and using reserves); and (2) the amount of gold produced by the operation during the year. The ore reserve statement as at 31 December 2019 became effective on 1 January 2020.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

	Proved and probable mineral reserves as of			Life-of-mine		Amortisation for the year ended	
	31 December 2019 '000oz	31 December 2018 '000oz	31 December 2017 '000oz	31 December 2019 years	31 December 2018 years	31 December 2019 US\$ million	31 December 2018 US\$ million

<b>Total reserves<sup>6</sup></b>	<b>54,049</b>	<b>54,049</b>	<b>54,900</b>			<b>610.0</b>	<b>668.4</b>

<sup>1</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, 91.0%, 90.8% and 90.7% of mineral reserves amounting to 34.023 million ounces, 29.772 million ounces and 29.763 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to future non-controlling shareholders in the South Deep operation in terms of the South Deep BEE transaction.

<sup>2</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, 90% of mineral reserves amounting to 5.315 million ounces, 5.200 million ounces and 5.305 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Tarkwa operation.

<sup>3</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, 90% of mineral reserves amounting to 1.555 million ounces, 1.454 million ounces and 1.214 million ounces of gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Damang operation.

<sup>4</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, 99.53% of mineral reserves amounting to 3.710 million ounces, 3.342 million ounces and 2.984 million ounces of equivalent gold were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Cerro Corona operation.

<sup>5</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, mineral reserves at Gruyere represent the 50% portion attributable to Gold Fields only.

<sup>6</sup> As of 31 December 2017, 31 December 2018 and 31 December 2019, reserves of 50.787 million ounces, 50.258 million ounces and 52.384 million ounces of equivalent gold, respectively, were attributable to Gold Fields, with the remainder attributable to non-controlling shareholders in the Ghanaian and Peruvian operations.

Amortisation and depreciation decreased by 9% from US\$668 million in 2018 to US\$610 million in 2019.

At South Deep in South Africa, amortisation and depreciation decreased by 26% from R646 million (US\$49 million) in 2018 to R476 million (US\$33 million) in 2019 mainly due to the impairment of the South Deep cash-generating unit in June 2018, as well as lower capital expenditure in 2019.

At the Ghanaian operations (excluding Asanko), amortisation and depreciation decreased by 12% from US\$268 million in 2018 to US\$236 million in 2019. Tarkwa increased by 8% from US\$168 million in 2018 to US\$182 million in 2019 mainly due to an increase in ounces mined. Damang decreased by 46% from US\$100 million in 2018 to US\$54 million in 2019 mainly due to the completion of the Amoanda pit in H1 2019. Amortisation and depreciation at the Amoanda pit decreased from US\$68 million in 2018 to US\$4 million in 2019. At Asanko, the amortisation and depreciation amounted US\$43 million for the 12 months ended December 2019 compared to US\$16 million for the five months ended December 2018 (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures).

At Cerro Corona in Peru, amortisation and depreciation increased by 13% from US\$82 million in 2018 to US\$93 million in 2019. This increase was mainly due to higher capital expenditure and higher ounces mined.

At the Australian operations, amortisation and depreciation decreased by 4% from A\$356 million (US\$266 million) in 2018 to A\$342 million (US\$238 million) in 2019. At St Ives, amortisation and depreciation decreased by 23% from A\$196 million (US\$146 million) in 2018 to A\$151 million (US\$105 million) in 2019 due to a decrease in ounces mined. At Agnew, amortisation and depreciation decreased by 10% from A\$100 million (US\$75 million) in 2018 to A\$90 million (US\$63 million) in 2019 due to an increase in ore reserves in 2019, resulting in a lower amortisation rate per ounce. At Granny Smith, amortisation and depreciation increased by 33% from A\$60 million (US\$45 million) in 2018 to A\$80 million (US\$55 million) in 2019 mainly due to depreciation of assets capitalised in line with the adoption of IFRS 16. At Gruyere, amortisation and depreciation amounted to A\$21 million (US\$15 million) for the three months (October to December 2019) in which Gruyere was in commercial levels of production.

### All-in sustaining and total all-in costs

The following table sets out for each operation and the Group, total gold sales in ounces, all-in sustaining costs and total all-in costs, net of by-product revenue, in US\$/oz for 2019 and 2018:

Figures in thousands unless otherwise stated	2019			2018		
	Gold only ounces sold	All-in sustaining costs – US\$/oz	Total all-in costs – US\$/oz	Gold only ounces sold	All-in sustaining costs – US\$/oz	Total all-in costs – US\$/oz
South Deep	222.1	1,259	1,259	167.8	1,903	2,012
<b>South African operation</b>	222.1	1,259	1,259	167.8	1,903	2,012
Tarkwa	519.1	958	958	524.9	951	951
Damang	208.4	809	1,147	180.8	813	1,506
Asanko <sup>1</sup>	112.0	1,112	1,214	45.9	1,069	1,175
<b>Ghanaian operations</b>	839.5	942	1,039	751.6	926	1,098
Cerro Corona <sup>2</sup>	159.7	472	472	141.0	282	282
<b>Peruvian operation</b>	159.7	472	472	141.0	282	282
St Ives	363.3	963	963	367.0	902	902
Agnew	219.6	1,152	1,152	238.5	1,026	1,026
Granny Smith	274.8	922	922	280.5	925	925
Gruyere – 50%	33.7	683	684	–	–	–
<b>Australian operations</b>	891.4	986	986	885.9	943	943
Total Group (including Asanko)	2,112.9	970	1,064	1,946.4	981	1,173
<b>Total Group (excluding Asanko)</b>	2,000.6	962	1,056	1,900.5	979	1,172

All-in costs are calculated in accordance with the World Gold Council Industry standard. Refer to pages 63 to 71 for detailed calculations and discussion of AIC.

<sup>1</sup> Equity-accounted joint venture.

<sup>2</sup> Gold sold at Cerro Corona excludes copper equivalents of 137,194 ounces in 2018 and 158,100 ounces in 2018.

Figures above may not add as they are rounded independently.

### AISC and AIC (ORIGINAL INTERPRETATION)

AISC net of by-product revenues (including Asanko) decreased by 1% from US\$981 per ounce of gold in 2018 to US\$970 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC net of by-product revenues (including Asanko) decreased by 9% from US\$1,173 per ounce of gold in 2018 to US\$1,064 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as lower non-sustaining capital expenditure and lower exploration, feasibility and evaluation costs.

AISC net of by-product revenues (excluding Asanko) decreased by 2% from US\$979 per ounce of gold in 2018 to US\$962 per ounce of gold in 2019, mainly due to higher gold sold and lower sustaining capital expenditure, partially offset by higher cost of sales before amortisation and depreciation. AIC net of by-product revenues (excluding Asanko) decreased by 10% from US\$1,172 per ounce of gold in 2018 to US\$1,056 per ounce of gold in 2019 due to the same reasons as for all-in sustaining costs as well as higher non-sustaining capital expenditure and higher exploration, feasibility and evaluation costs.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

At South Deep in South Africa, all-in sustaining costs decreased by 28% from R807,688 per kilogram (US\$1,903 per ounce) in 2018 to R585,482 per kilogram (US\$1,259 per ounce) in 2019 mainly due to higher gold sold, lower sustaining capital expenditure and lower cost of sales before amortisation and depreciation. The total all-in cost decreased by 31% from R854,049 per kilogram (US\$2,012 per ounce) in 2018 to R585,482 per kilogram (US\$1,259 per ounce) in 2019 due to the same reasons as for all-in sustaining costs as well as temporary postponement of non-sustaining capital expenditure.

At the Ghanaian operations, all-in sustaining costs increased by 2% from US\$926 per ounce in 2018 to US\$942 per ounce in 2019 and total all-in cost decreased by 5% from US\$1,098 per ounce in 2018 to US\$1,039 per ounce in 2019 as the project capital at Damang rolled off. Asanko was included for 12 months in 2019 and five months in 2018. At Tarkwa, all-in sustaining costs and total all-in costs increased by 1% from US\$951 per ounce in 2018 to US\$958 per ounce in 2019 due to lower gold sold, partially offset by lower capital expenditure. At Damang, all-in sustaining costs decreased marginally from US\$813 per ounce in 2018 to US\$809 per ounce in 2019 due to higher gold sold, partially offset by higher cost of sales before amortisation and depreciation. All-in costs decreased by 24% from US\$1,506 per ounce in 2018 to US\$1,147 per ounce in 2019 due to the same reasons as for all-in sustaining cost and lower non-sustaining capital. At Asanko, all-in sustaining costs and total all-in cost for the five months ended December 2018 was US\$1,069 per ounce and US\$1,175 per ounce, respectively and for the 12 months ended December 2019 was US\$1,112 per ounce and US\$1,214 per ounce, respectively.

At Cerro Corona in Peru, all-in sustaining costs and total all-in costs increased by 67% from US\$282 per ounce in 2018 to US\$472 per ounce in 2019 mainly due to lower by-product credits, higher capital expenditures and higher cost of sales before amortisation and depreciation. All-in sustaining costs and total all-in cost per equivalent ounce increased by 16% from US\$699 per equivalent ounce in 2018 to US\$810 per equivalent ounce in 2019 mainly due to the same reasons as above, as well as lower equivalent ounces sold.

At the Australian operations, all-in sustaining costs and total all-in costs increased by 12% from A\$1,262 per ounce (US\$943 per ounce) in 2018 to A\$1,418 per ounce (US\$986 per ounce) in 2019 due to lower ounces sold (part of Gruyere production for the year was capitalised) and higher cost of sales before amortisation and depreciation, partially offset by lower sustaining capital expenditure. At St Ives, all-in sustaining costs and total all-in costs increased by 15% from A\$1,207 per ounce (US\$902 per ounce) in 2018 to A\$1,385 per ounce (US\$963 per ounce) in 2019 due to higher cost of sales before amortisation and depreciation, partially offset by lower capital expenditure. At Agnew, all-in sustaining costs and total all-in costs increased by 21% from A\$1,374 per ounce (US\$1,026 per ounce) in 2018 to A\$1,656 per ounce (US\$1,152 per ounce) in 2019 due to lower gold sold, higher cost of sales before amortisation and depreciation and higher capital expenditure. At Granny Smith, all-in sustaining costs and total all-in costs increased by 7% from A\$1,239 per ounce (US\$925 per ounce) in 2018 to A\$1,325 per ounce (US\$922 per ounce) in 2019, mainly due to lower gold sold. At Gruyere, all-in sustaining costs and total all-in cost for the three months (October to December 2019) in which Gruyere was in commercial levels of production was A\$983 per ounce (US\$683 per ounce) and A\$983 per ounce (US\$684 per ounce), respectively.

### Investment income

Income from investments decreased by 13% from US\$8 million in 2018 to US\$7 million in 2019. The decrease was mainly due to lower interest rates in 2019.

The investment income in 2019 of US\$7 million comprised US\$1 million interest on monies invested in the South African rehabilitation trust fund and US\$6 million interest on other cash and cash equivalent balances.

The investment income in 2018 of US\$8 million comprised US\$1 million interest on monies invested in the South African rehabilitation trust fund and US\$7 million interest on other cash and cash equivalent balances.

Interest received on the South African rehabilitation trust fund remained flat at US\$1 million.

Interest on other cash balances decreased by 14% from US\$7 million in 2018 to US\$6 million in 2019 mainly due to lower interest rates in 2019.

### Finance expense

Finance expense increased by 16% from US\$88 million in 2018 to US\$102 million in 2019.

The finance expense of US\$102 million in 2019 comprised US\$12 million relating to the accretion of the environmental rehabilitation liability, US\$1 million relating to the unwinding of the silicosis provision, US\$18 million lease interest and US\$114 million on various Group borrowings, partially offset by borrowing costs capitalised of US\$43 million.

The finance expense of US\$88 million in 2018 comprised US\$12 million relating to the accretion of the environmental rehabilitation liability, US\$2 million relating to the unwinding of the silicosis provision and US\$92 million on various Group borrowings, partially offset by borrowing costs capitalised of US\$18 million.

The environmental rehabilitation liability accretion expense remained flat at US\$12 million in 2018.

The unwinding of the silicosis provision decreased by 50% from US\$2 million in 2018 to US\$1 million in 2019 due to a change in the expected timing of the cash flows, as well as an increase in the discount rate.

The interest expense on lease liability of US\$18 million relates to the adoption of IFRS 16 *Leases* in 2019.

Below is an analysis of the components making up the interest on the various Group borrowings, stated on a comparative basis:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
Interest on borrowings to fund capital expenditure and operating costs at the South African operation	7	9
Interest on US\$1 billion notes issue	36	43
Interest on US\$500 million five-year notes issue	16	–
Interest on US\$500 million 10-year notes issue	18	–
Interest on US\$100 million revolving senior secured credit facility	3	4
Interest on US\$150 million revolving senior secured credit facility	4	3
Interest on A\$500 million syndicated revolving credit facility	12	–
Interest on US\$1,290 million term loan and revolving credit facilities	17	31
Other interest charges	1	2
	114	92

Interest on borrowings to fund capital expenditure and operating costs at the South African operation decreased from US\$9 million in 2018 to US\$7 million in 2019 due to repayments of South African borrowings in 2019.

Interest on the US\$1 billion notes issue decreased from US\$43 million in 2018 to US\$36 million in 2019 due to the buy-back of US\$250 million of the outstanding notes on 24 May 2019.

On 9 May 2019, Gold Fields successfully concluded the raising of two new bonds, a US\$500 million five-year notes issue and a US\$500 million 10-year notes issue, raising a total of US\$1 billion. Interest on the US\$500 million five-year notes issue and US\$500 million 10-year notes issue amounted to US\$16 million and US\$18 million in 2019, respectively.

Interest on the US\$100 million term revolving senior secured credit facility decreased from US\$4 million in 2018 to US\$3 million in 2019 due to the repayment of the facility during 2019.

Interest on the US\$150 million revolving senior secured credit facility increased marginally from US\$3 million in 2018 to US\$4 million in 2019.

Interest on the A\$500 million syndicated revolving credit facility was US\$12 million in 2019.

Interest on the US\$1,290 million term loan and revolving credit facilities decreased from US\$31 million in 2018 to US\$17 million in 2019 due to the repayment of the facilities in 2019.

Capitalised interest increased by 139% from US\$18 million in 2018 to US\$43 million in 2019 due to higher interest capitalised as a result of higher carrying values at Damang and Gruyere. This interest was capitalised in terms of IAS 23 *Borrowing Costs*. IAS 23 requires capitalisation of borrowing costs whenever general or specific borrowings are used to finance qualifying projects. The qualifying projects in 2019 were the Damang reinvestment project (US\$20 million) and the Gruyere project (US\$23 million). The qualifying projects in 2018 were the Damang reinvestment project (US\$10 million) and the Gruyere project (US\$8 million). An average interest capitalisation rate of 6.2% (2018: 5.9%) was applied.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### (Loss)/gain on financial instruments

The loss on financial instruments of US\$238 million in 2019 compared with a gain of US\$21 million in 2018.

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
South Deep gold hedge	(26)	(3)
Ghana gold hedge	(37)	22
Ghana oil hedge	2	2
Peru copper hedge	–	9
Australia gold hedge	(179)	(5)
Australia oil hedge	2	1
Australia foreign currency hedge	(7)	(9)
Maverix warrants – gain on fair value	4	4
Gain on fair value on disposal of Maverix	3	–
	(238)	21

In 2019, the US\$238 million comprised US\$245 million losses on hedges and a US\$7 million gain on the mark-to-market of Maverix warrants. The US\$245 million included US\$132 million realised losses and US\$113 million unrealised losses. The realised losses of US\$132 million comprised losses realised on the South Deep gold hedge of R220 million (US\$15 million), the Australian gold hedge of A\$163 million (US\$113 million) and the Australian currency hedge of A\$22 million (US\$14 million), partially offset by gains made on the Ghana oil hedge of US\$5 million, Ghana gold hedge of US\$2 million and Australian oil hedge of A\$4 million (US\$3 million).

The unrealised losses of US\$113 million comprised losses on the South Deep gold hedge of R153 million (US\$11 million), the Ghana gold hedge US\$39 million, the Australian gold hedge of A\$94 million (US\$66 million), the Ghana oil hedge of US\$3 million and Australian oil hedge of A\$1 million (US\$1 million), partially offset by a gain on Australian currency hedge of A\$12 million (US\$7 million).

#### South Deep gold hedge

Between October 2018 and January 2019, South Deep entered into cash-settled average rate forwards for a total of 112,613 ounces for the period June 2019 to December 2019 at an average strike rate of R617,000 per kilogram.

In June 2019, a total of 200,000 ounces of the expected production for 2020 for South Deep was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars (100,000 ounces) and average rate forwards (100,000 ounces). The average strike price is R660,000 per kilogram on the floor and R727,000 per kilogram on the cap.

The average strike price is R681,400 per kilogram on the forwards.

At 31 December 2019, the mark-to-market value on the hedge was negative R176 million (US\$13 million) (2018: R23 million (US\$2 million)) with a realised loss of R220 million (US\$15 million) (2018: gain of R117 million (US\$9 million) for the year ended 31 December 2019.

#### Ghana gold hedge

In January 2018 and April 2018, a total of 488,900 ounces of the expected production for the Ghanaian region was hedged for the period January 2018 to December 2018 using zero-cost collars. The average strike prices are US\$1,300 per ounce on the floor and US\$1,418 per ounce on the cap.

In June 2019, a total of 275,000 ounces of the expected production for 2020 for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero-cost collars (175,000 ounces) and average rate forwards (100,000 ounces). The average strike prices are US\$1,364 per ounce on the floor and US\$1,449 per ounce on the cap. The average strike price on the forwards is US\$1,382 per ounce.

Subsequent to 30 June 2019, 100,000 ounces of the expected production for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars. The average strike prices are US\$1,400 per ounce on the floor and US\$1,557 per ounce on the cap.

At 31 December 2019, the mark-to market value on the hedge was negative US\$36 million (2018: positive US\$2 million) with a realised gain of US\$2 million (2018: US\$20 million) for the year ended 31 December 2019.

### Ghana oil hedge

In May 2017 and June 2017, the Ghanaian operations entered into fixed price ICE Gasoil cash-settled swap transaction for a total of 125.8 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$457.2 per metric tonne (equivalent US\$61.4 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenure was US\$49.8 per barrel.

In June 2019, fixed price ICE Gasoil cash-settled swap transactions were entered into for a total of 123.2 million litres of diesel for the period January 2020 to December 2022 based on 50% of usage over the specified period. The average swap price is US\$575 per metric tonne (equivalent to US\$75.8 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenor was US\$59.2 per barrel.

At 31 December 2019, the mark-to-market value on the hedge was a US\$nil (2018: US\$3 million) with a realised gain of US\$5 million (2018: US\$8 million).

### Peru copper hedge

In November 2017, zero-cost collars were entered into for the period January 2018 to December 2018. A total volume of 29,400 tonnes was hedged, at an average floor price of US\$6,600 per tonne and an average cap price of US\$7,431 per tonne.

At 31 December 2019, the mark-to-market valuation of the hedge was a US\$nil (2018: positive of US\$1 million), with a realised gain of US\$nil (2018: US\$5 million).

### Australia gold hedge

In February 2018, the Australian operations entered into Asian swaps (Asian swaps are options where the payoff is determined by the average monthly gold price over the option period) for the period June 2018 to December 2018 for a total of 221,000 ounces of gold. The average strike price on the swaps was A\$1,714 per ounce. In March 2018, the Australian operations entered into zero-cost collars for the period April 2018 to December 2018 for a total of 452,800 ounces of gold. The average strike prices are A\$1,703 per ounce on the floor and US\$1,767 per ounce on the cap.

In December 2018, additional Asian swaps were entered into for the period January 2019 to December 2019 for a notional 283,000 ounces of gold at an average strike price of A\$1,751 per ounce. In December 2018, additional zero-cost collars were executed for the period January 2019 to December 2019 for a notional 173,000 ounces of gold with a strike price on the floor at A\$1,720 per ounce and the strike price on the cap at A\$1,789 per ounce.

In January 2019, zero-cost collars were executed for the period January 2019 to December 2019 for a notional 456,000 ounces of gold with a strike price on the floor at A\$1,800 per ounce and the strike price on the cap at A\$1,869 per ounce.

In June 2019, a total of 480,000 ounces of the expected production for 2020 for the Australian region was hedged for the period January 2020 to December 2020 using cash-settled zero-cost collars (270,000 ounces) and average rate forwards (210,000 ounces). The average strike prices are A\$1,933 per ounce on the floor and A\$2,014 on the cap. The average strike price on the forwards is A\$1,957 per ounce.

At 31 December 2019, the mark-to-market value on the hedges was negative A\$111 million (US\$78 million) (2018: A\$18 million (US\$12 million)) with a realised loss of A\$163 million (US\$113 million) (2018: gain of A\$11 million (US\$8 million)) for the year ended 31 December 2019.

### Australia oil hedge

In May 2017 and June 2017, the Australian operations entered into fixed price Singapore 10ppm Gasoil cash-settled swap transactions for a total of 77.5 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$61.2 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenure was US\$49.9 per barrel.

In June 2019, fixed price Singapore 10ppm Gasoil cash-settled swap transactions were entered into for a total of 75.0 million litres of diesel for the period January 2020 to December 2022 based on 50% of usage over the specified period. The average swap price is US\$74.0 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenor was US\$57.4 per barrel.

At 31 December 2019, the mark-to-market value on the hedge was a positive A\$1 million (US\$1 million) (2018: A\$3 million (US\$2 million)) with a realised gain of A\$4 million (US\$3 million) (2018: A\$6 million (US\$5 million)).

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Australia foreign currency hedge

In May 2018, the Australian operations entered into Australian Dollar/US Dollar average rate forwards for a total notional US\$96 million for the period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7517. In June 2018, further hedges were taken out for a total notional US\$60 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7330. In September 2018, further hedges were taken out for a total notional US\$100 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7182. In October 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$60 million at an average strike price of A\$/US\$ 0.7075. In December 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$50 million at an average strike price of A\$/US\$ 0.715.

At 31 December 2019, the mark-to-market value on the hedges was A\$nil (US\$nil) (2018: A\$12 million (US\$9 million)) with a realised loss of A\$22 million (US\$14 million) (2018: A\$nil (US\$nil)) for the year ended 31 December 2019.

### Foreign exchange (loss)/gain

The foreign exchange loss of US\$5 million in 2019 compared with a gain of US\$6 million.

These gains or losses on foreign exchange related to the conversion of offshore cash holdings into their functional currencies. The exchange loss of US\$5 million was mainly due to the release of the foreign exchange reserve on disposal of subsidiary, while the exchange gain of US\$6 million was due to the strengthening of the Ghanaian Cedi and the weakening of the Australian Dollar.

### Other costs, net

Other costs, net increased by 51% from US\$45 million in 2018 to US\$68 million in 2019.

The costs in 2019 are mainly made up of:

- Social contributions and sponsorships of US\$18 million;
- Offshore structure costs of US\$17 million;
- Loss on buy-back on notes of US\$5 million;
- Damang contract termination costs of US\$13 million; and
- Rehabilitation expense of US\$13 million as a result of changes in estimates relating to the provision for environmental rehabilitation costs recognised in profit or loss.

The costs in 2018 are mainly made up of:

- Social contributions and sponsorships of US\$15 million;
- Offshore structure costs of US\$16 million;
- Corporate-related costs of US\$5 million;
- Loss on sale of inventory of US\$9 million; and
- Rehabilitation income of US\$1 million as a result of changes in estimates relating to the provision for environmental rehabilitation costs recognised in profit or loss.

### Share-based payments

Gold Fields recognises the cost of share options granted (share-based payments) in terms of IFRS 2 *Share-based Payment*.

The Group grants share options and restricted shares to Executive Directors, certain officers and employees under the Gold Fields Limited 2012 share plan amended. Gold Fields has adopted appropriate valuation models (Black-Scholes and Monte Carlo simulation) to fair value share-based payments. The value of the equity-settled instruments is determined at the grant date of the options and depending on the rules of the plan expensed on a straight-line basis over a three-year vesting period, adjusted for forfeitures as appropriate.

From 2018 onwards, only Executive Committee members (including regional Executive Committee members) receive awards under the Gold Fields Limited 2012 share plan amended, while senior and middle management receive awards under the revised long-term incentive plan ("LTIP").

Share-based payments decreased by 45% from US\$38 million in 2018 to US\$21 million in 2019 mainly due to the awards from 2018 onwards being granted to the Executive Committee members only. The corresponding entry for the share-based payment expense was the share-based payment reserve within shareholders' equity.

### Long-term incentive plan expense

Gold Fields recognises the long-term incentive plan expense in terms of IAS 19 *Employee Benefits*.

On 1 March 2014, the Remuneration Committee approved the Gold Fields Limited long-term cash incentive plan (“LTIP”). The plan provided for Executive Directors, certain officers and employees to receive a cash award, conditional on the achievement of specified performance conditions relating to total shareholder return and free cash flow margin. The conditions were assessed over the performance cycle which runs over three calendar years. The expected timing of the cash outflows in respect of each grant was at the end of three years after the original award was made. The last award under this plan was made in 2015.

From 2018 onwards, Executive Committee members (including regional Executive Committee members) receive awards under the Gold Fields Limited 2012 share plan amended, while senior and middle management receive awards under the revised LTIP. The performance conditions of the revised LTIP are approved annually by the Remuneration Committee. The expected timing of the cash outflows in respect of each grant is at the end of three years after the original award was made.

The LTIP expense increased by 800% from US\$1 million in 2018 to US\$9 million in 2019 due to awards being granted to senior and middle management from 2018 onwards.

### Exploration expense

The exploration expense decreased by 19% from US\$104 million in 2018 to US\$84 million in 2019.

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
Australia	30	38
Salares Norte	49	61
Exploration office costs	5	5
<b>Total exploration expense</b>	<b>84</b>	<b>104</b>

In 2019, Australia spent US\$59 million on exploration of which US\$30 million was expensed in the income statement.

In 2018, Australia spent US\$64 million on exploration of which US\$38 million was expensed in the income statement.

### Share of results of equity-accounted investees, net of taxation

Share of results of equity-accounted investees, net of taxation was a loss of US\$13 million in 2018 compared to a profit of US\$3 million in 2019.

During 2019 and 2018, Gold Fields equity-accounted for Far South East Resources Incorporated (“FSE”), Maverix Metals Incorporated (“Maverix”) and Asanko Gold Inc (“Asanko”).

FSE’s share of results of equity-accounted investees, net of taxation decreased from a loss of US\$13 million in 2018 to a loss of US\$1 million in 2019, mainly due to the US\$12 million write-off of deferred costs and other non-recoverable amounts in 2018.

In March 2018, Gold Fields entered into an agreement to form an incorporated joint venture with Asanko Gold. In the deal which became unconditional on 31 July 2018, Gold Fields acquired 45% of Asanko Gold Ghana Limited (“AGGL”), the former Asanko subsidiary that owns the Asanko Gold mine, with the government of Ghana continuing to retain a 10% free carried interest in AGGL. The share of results of equity-accounted investees, net of taxation for Asanko, was a profit of US\$4 million in 2019 compared to a loss of US\$1 million in 2018.

Maverix’s share of results of equity-accounted investees, net of taxation decreased from a profit of US\$1 million in 2018 to US\$nil in 2019, representing nil% (2018: 19.9%) shareholding. The decrease is due to the sale of Maverix during 2019 (refer below for further details).

### Profit on disposal of Maverix Metals Incorporated

Profit on disposal of Maverix Metals amounted to US\$15 million in 2019.

In line with its key strategic objective of paying down its debt, Gold Fields Limited disposed of its shareholding in Maverix during the year ended 31 December 2019. The sale of the shares, processed through a series of private market transactions, raised US\$67 million in cash. After the first transaction, Maverix no longer met the definition of an associate and it was reclassified as a listed investment. A profit on disposal of US\$15 million was recognised comprising a profit on disposal of associate of US\$34 million, partially offset by a loss on derecognition of the investment in Maverix designated at fair value through profit or loss of US\$19 million.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Restructuring costs

Restructuring costs decreased by 99% from US\$114 million in 2018 to US\$1 million in 2019. The cost in 2019 relates mainly to separation packages at South Deep and Tarkwa and the cost in 2018 relates mainly to separation packages at South Deep (US\$11 million), Damang (US\$14 million) and Tarkwa (US\$89 million) (related to the conversion from owner to contractor mining implemented in 2018).

### Silicosis settlement costs

Silicosis settlement costs decreased by 60% from a reversal of costs of US\$5 million in 2018 and to a reversal of costs of US\$2 million in 2019.

A consolidated application was brought against several South African mining companies, including Gold Fields, for certification of a class action on behalf of current or former mineworkers (and their dependants) who have allegedly contracted silicosis and/or tuberculosis while working for one or more of the mining companies listed in the application (refer to notes 25.2 and 35 of the consolidated financial statements for further details).

During 2019 and 2018, reversal of costs of US\$2 million and US\$5 million, respectively, related to a change in the expected timing of the cash flows and an increase in the discount rate.

### Gain on acquisition of Asanko

On 29 March 2018, the Group entered into certain definitive agreements (the "JV Transaction") with Asanko Gold Inc. pursuant to which, among other things:

- Gold Fields and Asanko will each own a 45% interest in Asanko Gold Ghana Limited ("AGGL"), the former Asanko subsidiary that owns the Asanko Gold mine, with the government of Ghana continuing to retain a 10% free-carried interest in AGGL (the "Joint Arrangement");
- Gold Fields and Asanko will each own a 50% interest in Adansi Gold Company Ghana Limited ("Adansi Ghana"), the Asanko subsidiary that currently owns a number of the Company's exploration licences; and
- Gold Fields and Asanko will each acquire a 50% interest in a newly formed entity (Shika Group Finance Limited ("JV Finco")).

On 20 June 2018, Gold Fields and Asanko received approval of the JV Transaction from the Ghanaian Minister of Lands and Natural Resources and the JV transaction closed on 31 July 2018 once all conditions precedent were met.

In consideration for its interests in the Joint Arrangement, Gold Fields contributed US\$165 million in 2018, representing its initial US\$165 million redeemable share investment in JV Finco, as well as its initial US\$nil equity investments in AGGL, Adansi Ghana and JV Finco, respectively. An additional US\$20 million was invested in the redeemable preference shares during 2019.

### Recognition and measurement

Gold Fields and Asanko have joint control and the Asanko transaction is structured as a separate vehicle and the Group has a residual interest in the net assets of Asanko. Accordingly, the Group has classified its interest in Asanko as a joint venture.

### Fair value measured

There were no changes in 2019 to the provisional purchase price allocation performed at the time of acquisition of Asanko, therefore the purchase price allocation is considered final.

### Consideration transferred

The following table summarises the acquisition date fair value of the consideration transferred:

	United States Dollar
<i>Figures in millions unless otherwise stated</i>	
<b>2018</b>	
Cash for Asanko redeemable preference shares and equity	165
<b>Total consideration paid</b>	<b>165</b>

An additional US\$20 million was invested in the redeemable preference shares in 2019.

## Gain on acquisition of Asanko

The gain on acquisition was determined as follows:

<i>Figures in millions unless otherwise stated</i>		United States Dollar
<b>2018</b>		
Total fair value of assets acquired		217
Consideration transferred		(165)
<b>Gain on acquisition</b>		<b>52</b>

The redeemable preference shares have the following conditions:

- Redeemable at the option of the issuer at par value; and
- Non-interest-bearing.

The redeemable preference shares were recognised as an investment in an equity financial instrument measured at fair value through other comprehensive income. The key assumptions used to determine the fair value of the redeemable preference shares of US\$130 million at acquisition were as follows:

Par value of the preference shares	US\$/165.0 million
Market-related interest rate	7.85%
Expected redemption period – 2020 to 2023	5 years

- The key assumptions used to determine the fair value of the net identifiable assets acquired were as follows:

US\$ gold price – 2018 to 2019	US\$1,200/oz
US\$ gold price – 2020 onwards	US\$1,300/oz
Discount rate	10.27%
Life-of-mine – 2019 to 2030	12 years

- The excess of the fair value of the identifiable net assets acquired over the consideration is recognised immediately in profit or loss as a gain on acquisition. The injection of capital into Asanko Gold Mine for an equity stake represented a favourable deal for Gold Fields, as Asanko needed to refinance the debt of Asanko Gold Mine, resulting in a gain on acquisition.

## Impairment, net of reversal of impairment of investments and assets

Impairment, net of reversal of impairment of investments and assets decreased by 98% from US\$520 million in 2018 to US\$10 million in 2019.

		United States Dollar	
<i>Figures in millions unless otherwise stated</i>		2019	2018
Cerro Corona redundant assets		–	2
South Deep cash-generating unit – goodwill		–	72
South Deep cash-generating unit – other assets		–	410
FSE		10	37
		10	520

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

The impairment charge of US\$10 million in 2019 relate mainly to the net impairment of FSE. The impairment of FSE was based on the fair value less cost of disposal of the investment which was indirectly derived from the market value of Lepanto Consolidated Mining Company.

The impairment charge of US\$520 million in 2018 comprises:

- US\$2 million impairment of redundant assets at Cerro Corona;
- US\$482 million cash-generating unit impairment at South Deep. US\$72 million of the impairment was firstly allocated to goodwill and the remainder of US\$410 million to other assets. The impairment calculation was performed in June 2018 and given that impairment indicators still existed at 31 December 2018, a further assessment was performed. The recoverable amount at 31 December 2018 is R21.2 billion (US\$1.4 billion). There were no further impairments at 31 December 2018 using the following assumptions:
  - Gold price of R525,000 per kilogram for 2019 and R550,000 per kilogram thereafter;
  - Resource price of US\$17 per ounce at a Rand/US\$ exchange rate of R14.63;
  - Resource ounces of 24.5 million ounces;
  - Life-of-mine of 75 years; and
  - Discount rate of 13.5% nominal.
- US\$37 million impairment of FSE. The impairment of FSE was based on the fair value less cost of disposal of the investment which was indirectly derived from the market value of Lepanto Consolidated Mining Company.

### Profit/(loss) on disposal of assets

Loss of US\$52 million in 2018 compared to a profit on disposal of assets was US\$1 million in 2019.

Profit on disposal of assets of US\$1 million in 2019 related mainly to the sale of redundant assets at South Deep, Ghana and Australia.

Loss on disposal of assets of US\$52 million in 2018 related mainly to the losses of US\$38 million on the sale of mining fleet and heavy machinery equipment and inventory at Tarkwa as part of the transition to contractor mining and a loss of US\$15 million on the sale of APP.

### Royalties

Royalties increased by 17% from US\$63 million in 2018 to US\$74 million in 2019 and are made up as follows:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
South Africa	2	1
Ghana	36	29
Peru	5	5
Australia	31	28
	74	63

The royalty in South Africa increased by 100% from US\$1 million in 2018 to US\$2 million in 2019 due to an increase in revenue in 2019.

The royalty in Ghana increased by 24% from US\$29 million in 2018 to US\$36 million in 2019 due to an increase in revenue and an increase in the royalty rate in 2019.

The royalty in Peru remained flat at US\$5 million.

The royalty in Australia increased by 11% from US\$28 million in 2018 to US\$31 million in 2019 due to an increase in revenue in 2019.

## Mining and income tax

Mining and income tax was an income of US\$66 million in 2018 compared to a charge of US\$176 million in 2019.

The table below indicates Gold Fields' effective tax rate in 2019 and 2018:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
Income and mining tax credit/(charge) (US\$ million)	(176)	66
Effective tax rate (%)	50.3	16.0

In 2019, the effective tax rate of 50.3% was higher than the maximum South African mining statutory tax rate of 34% mainly due to the tax effect of the following:

- US\$18 million adjustment to reflect the actual realised company tax rates in South Africa and offshore;
- US\$1 million of non-taxable share of results of equity-accounted investees, net of taxation;
- US\$1 million non-taxable fair value gain on Maverix warrants; and
- US\$5 million non-taxable profit on disposal of Maverix.

The above were offset by the following tax effected charges:

- US\$24 million non-deductible charges comprising share-based payments (US\$7 million) and exploration expense (US\$17 million);
- US\$3 million recognised on impairment of FSE;
- US\$30 million non-deductible interest paid;
- US\$3 million dividend withholding tax;
- US\$11 million of net non-deductible expenditure and non-taxable income;
- US\$5 million deferred tax on unremitted earnings at Tarkwa and Cerro Corona;
- US\$7 million of various Peruvian non-deductible expenses; and
- US\$3 million deferred tax assets not recognised at Cerro Corona.

In 2018, the effective tax rate of 16.0% was lower than the maximum South African mining statutory tax rate of 34% mainly due to the tax effect of the following:

- US\$18 million non-taxable gain on acquisition of Asanko;
- US\$1 million non-taxable fair value gain on Maverix warrants;
- US\$1 million non-taxable profit on dilution of Gold Fields' interest in Maverix warrants;
- US\$7 million deferred tax assets recognised at Damang; and
- US\$70 million additional capital allowances recognised at South Deep.

The above were offset by the following tax effected charges:

- US\$7 million adjustment to reflect the actual realised company tax rates in South Africa and offshore;
- US\$35 million non-deductible charges comprising share-based payments (US\$13 million) and exploration expense (US\$22 million);
- US\$13 million and US\$24 million deferred tax assets not recognised on impairment of FSE and South Deep goodwill, respectively;
- US\$26 million non-deductible interest paid;
- US\$5 million of non-deductible share of results of equity-accounted investees, net of taxation;
- US\$16 million dividend withholding tax;
- US\$15 million deferred tax assets not recognised at Cerro Corona;
- US\$8 million of net non-deductible expenditure and non-taxable income;
- US\$1 million deferred tax raised on unremitted earnings at Tarkwa and Cerro Corona;
- US\$1 million deferred tax movement on Peruvian Nuevo Sol devaluation against US Dollar;
- US\$8 million of various Peruvian non-deductible expenses; and
- US\$11 million deferred tax release on change of tax rate at South Deep.

## Profit/(loss) for the year

As a result of the factors discussed above, a profit of US\$175 million in 2019 compared to a loss of US\$345 million in 2018.

## Profit/(loss) attributable to owners of the parent

A profit attributable to owners of the parent of US\$162 million in 2019 compared to a loss of US\$348 million in 2018.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Profit attributable to non-controlling interests

Profit attributable to non-controlling interests increased by 333% from US\$3 million in 2018 to US\$13 million in 2019.

The non-controlling interest consists of Gold Fields Ghana (Tarkwa) and Abosso Goldfields (Damang) at 10% each at the end of 2019 and 2018 and Gold Fields La Cima (Cerro Corona) at 0.47% at the end of 2019 and 2018.

The amount making up the non-controlling interest is shown below:

	2019	2018	2019	2018
	Minority interest Effective*	Minority interest Effective*	US\$ million	US\$ million
Gold Fields Ghana Limited – Tarkwa	10.0%	10.0%	10	4
Abosso Goldfields – Damang	10.0%	10.0%	3	(1)
Gold Fields La Cima – Cerro Corona	0.47%	0.47%	–	–
			13	3

\* Average for the year.

### Basic earnings/(loss) per share

As a result of the above, Gold Fields earnings of US\$0.20 per share in 2019 compared to a loss per share of US\$0.42 in 2018.

### LIQUIDITY AND CAPITAL RESOURCES – YEARS ENDED 31 DECEMBER 2020 AND 31 DECEMBER 2019

#### CASH RESOURCES

##### Cash flows from operating activities

Cash inflows from operating activities increased by 31% (US\$266 million) from US\$845 million in 2019 to US\$1,111 million in 2020. The items comprising these are discussed below.

The increase of US\$266 million was due to:

	United States Dollar
<i>Figures in millions unless otherwise stated</i>	
Increase in cash generated from operations due to higher gold sold and higher gold price	631
Increase in interest received	1
Increase in investment in working capital due to an increase in prepayments, buildup of gold-in-process and fifth creditor cycle payment as a result of the change to a calendar month end	(147)
Decrease in silicosis payment	1
Decrease in interest paid due to lower borrowings	5
Increase in royalties paid due to higher gold sold and higher gold price	(31)
Increase in taxes paid due to higher gold sold and higher gold price	(97)
Increase in dividends paid due to higher normalised earnings and higher dividends paid to non-controlling interest	(97)
	266

Dividends paid increased from US\$49 million in 2019 to US\$146 million in 2020. The dividends paid of US\$146 million in 2020 comprised dividends paid to ordinary shareholders of US\$138 million, dividends paid to non-controlling interests in Ghana and Peru of US\$7 million and South Deep BEE dividend of US\$1 million.

The dividends paid of US\$49 million in 2019 comprised dividends paid to ordinary shareholders of US\$46 million, dividends paid to non-controlling interests in Ghana and Peru of US\$2 million and South Deep BEE dividend of US\$1 million.

### Cash flows from investing activities

Cash outflows from investing activities increased by 36% (US\$160 million) from US\$447 million in 2019 to US\$607 million in 2020.

The increase of US\$160 million was due to:

<i>Figures in millions unless otherwise stated</i>	<b>United States Dollar</b>
Decrease in additions to property, plant and equipment	<b>29</b>
Increase in capital expenditure – working capital	<b>(7)</b>
Decrease in proceeds on disposal of property, plant and equipment	<b>(3)</b>
Purchase of Asanko Gold – 2019	<b>20</b>
Decrease in purchase of investments	<b>6</b>
Increase in redemption of Asanko preference shares	<b>28</b>
Proceeds on disposal of subsidiary – 2019	<b>(6)</b>
Proceeds on disposal of Maverix – 2019	<b>(67)</b>
Decrease in proceeds on disposal of investments	<b>(90)</b>
Loan advanced to contractor – 2020	<b>(68)</b>
Increase in environmental trust funds and rehabilitation payments	<b>(2)</b>
	<b>160</b>

### Additions to property, plant and equipment

Capital expenditure decreased by 5% from US\$613 million in 2019 to US\$584 million in 2020.

Gold Fields adopted the new Interpretation of the World Gold Council prospectively from 1 January 2019. In 2020, capital expenditure for 2020 and 2019 is presented according to the new Interpretation. Only the split between sustaining and non-sustaining capital is amended. Total capital expenditure remains the same under both methods.

<b>Capital expenditure (excluding Asanko)</b>	<b>409</b>	<b>175</b>	<b>584</b>	324	289	613

<sup>1</sup> Equity-accounted joint venture. Asanko capital expenditure not included in the Group capital expenditure per the cash flow statement.

Capital expenditure at South Deep in South Africa increased by 68% from R479 million (US\$33 million) in 2019 to R804 million (US\$49 million) in 2020. The capital expenditure of R804 million (US\$49 million) in 2020 comprised R718 million (US\$44 million) sustaining capital and R86 million (US\$5 million) growth capital. The capital expenditure of R479 million (US\$33 million) in 2019 comprised only sustaining capital expenditure.

- This increase in sustaining capital was mainly due to the purchase of new TM3 equipment (R124 million (US\$8 million)), the refurbishment of existing fleet (R47 million (US\$3 million)), phase 1 of the Newtrax equipment conditioning monitoring and tracking system implementation and IT infrastructure upgrades (R53 million (US\$3 million); and
- The growth capital in 2020 was due to the recommencement of the new mine development.

Capital expenditure at the Ghanaian operations (excluding Asanko) decreased by 17% from US\$202 million in 2019 to US\$167 million in 2020:

- Tarkwa increased by 17% from US\$126 million in 2019 to US\$147 million in 2020 mainly due to the higher capital waste mined. All capital related to sustaining capital;
- Damang decreased by 74% from US\$76 million in 2019 to US\$20 million in 2020 due to lower capital waste tonnes mined. The capital expenditure of US\$20 million in 2020 comprised US\$14 million sustaining capital and US\$6 million growth capital. The capital expenditure of US\$76 million in 2019 comprised US\$5 million sustaining capital and US\$71 million growth capital; and
- Asanko increased by 15% from US\$27 million in 2019 to US\$31 million in 2020. The capital expenditure of US\$31 million in 2020 comprised US\$13 million sustaining capital expenditure and US\$18 million growth capital. The capital expenditure of US\$27 million in 2019 comprised US\$20 million sustaining capital expenditure and US\$7 million growth capital. The increase was due to increased expenditure on the Tetrem relocation project (RAP), exploration at Miridani North and Akwasiso Cut 3. (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures).

Capital expenditure at Cerro Corona in Peru decreased by 11% from US\$56 million in 2019 to US\$50 million in 2020. The capital expenditure of US\$50 million in 2020 comprised US\$24 million sustaining capital expenditure and US\$26 million growth capital. The capital expenditure of US\$56 million in 2019 comprised US\$44 million sustaining capital expenditure and US\$12 million growth capital. The decrease was due to the quarantine decreed by the government relating to Covid-19, which restricted the construction activities at the tailings dam and Arpon's waste storage facility. Additional camp and dining room facilities were constructed during 2020 at a cost of US\$6 million in order to increase capacity at site as a result of the Covid-19 regulations implemented.

Capital expenditure at the Australian operations decreased by 30% from A\$458 million (US\$318 million) in 2019 to A\$319 million (US\$220 million) in 2020:

- St Ives decreased by 25% from A\$141 million (US\$98 million) in 2019 to A\$107 million (US\$74 million) in 2020 mainly due to the Invincible South and Hamlet North underground mines which were being developed in 2019. The capital expenditure of A\$107 million (US\$74 million) in 2020 comprised A\$90 million (US\$62 million) sustaining capital expenditure and A\$17 million (US\$12 million) growth capital. The capital expenditure of A\$141 million (US\$98 million) in 2019 comprised A\$66 million (US\$46 million) sustaining capital expenditure and A\$75 million (US\$52 million) growth capital. The increase in sustaining capital expenditure and decrease in non-sustaining capital expenditure was due to the reclassification of development cost at Invincible South and Hamlet North Mines. Invincible South turned cash flow positive in quarter four of 2019 and Hamlet North in quarter 1 of 2020, which resulted in capital costs moving from non-sustaining to sustaining in accordance with World Gold Council guidelines;
- Agnew decreased by 31% from A\$109 million (US\$76 million) in 2019 to A\$75 million (US\$52 million) in 2020. The capital expenditure of A\$75 million (US\$52 million) in 2020 comprised A\$63 million (US\$43 million) sustaining capital expenditure and A\$12 million (US\$9 million) growth capital. The capital expenditure of A\$109 million (US\$76 million) in 2019 comprised A\$51 million (US\$35 million) sustaining capital expenditure and A\$58 million (US\$41 million) growth capital. The decreased was driven by a decrease in non-sustaining capital expenditure. Additional expenditure was incurred in 2019 to establish the new accommodation village A\$32 million (US\$22 million) and development of the Waroonga North decline A\$5 million (US\$3 million). In addition non-sustaining exploration drilling reduced by A\$6 million (US\$4 million) from 2019. Sustaining capital expenditure increased due to increased mine development at Waroonga;
- Granny Smith decreased by 8% from A\$104 million (US\$72 million) in 2019 to A\$96 million (US\$66 million) in 2020 due to decreased capitalised drilling cost in 2020. The capital expenditure of A\$96 million (US\$66 million) in 2020 comprised A\$69 million (US\$47 million) sustaining capital expenditure and A\$28 million (US\$19 million) growth capital. The capital expenditure of A\$104 million (US\$72 million) in 2019 comprised A\$37 million (US\$26 million) sustaining capital expenditure and A\$67 million (US\$46 million) growth capital. The increase in sustaining capital expenditure and decrease in non-sustaining capital expenditure was due to the reclassification of the Zone 110/120 areas which turned cash flow positive during the first six months of 2020 which resulted in capital costs moving from non-sustaining to sustaining in accordance with World Gold Council guidelines; and
- Capital expenditure at Gruyere decreased by 61% from A\$104 million (US\$72 million) in 2019 to A\$41 million (US\$28 million) in 2020. The 2019 capital expenditure was primarily incurred to complete the Gruyere construction project and stripping activities at the Gruyere pit. The capital expenditure of A\$41 million (US\$28 million) in 2020 comprised A\$39 million (US\$27 million) sustaining capital and A\$2 million (US\$1 million) growth capital. The capital expenditure of A\$104 million (US\$72 million) in 2019 comprised A\$8 million (US\$5 million) sustaining capital and A\$96 million (US\$67 million) growth capital.

At Salares Norte, capital expenditure increased by 100% to US\$97 million in 2020 from US\$ nil million in 2019 due to the approval of the feasibility study and commencement of capitalisation of the project from 1 April 2020.

#### **Proceeds on disposal of property, plant and equipment**

Proceeds on the disposal of property, plant and equipment decreased by 75% from US\$4 million in 2019 to US\$1 million in 2020. In both 2020 and 2019, the proceeds related mainly to the disposal of various redundant assets.

#### **Purchase of Asanko Gold**

Purchase of Asanko Gold was US\$20 million in 2019 and related to the additional purchase of preference shares in accordance with the JV transaction with Asanko Gold Inc. which was completed on 31 July 2018.

#### **Purchase of investments**

Investment purchases decreased by 86% from US\$7 million in 2019 to US\$1 million in 2020. Purchase of investments of US\$1 million in 2020 related to a purchase of 3.4 million shares in Lefroy Exploration Limited. Purchase of investments of US\$7 million in 2019 related to Chakana Copper.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Redemption of Asanko preference shares

Redemption of Asanko preference shares amounted to US\$10 million in 2019 and US\$38 million in 2020.

### Proceeds on disposal of subsidiary

Proceeds on disposal of subsidiary amounted to US\$6 million in 2019 and related to the sale of Norperuana.

### Proceeds on disposal of Maverix

Proceeds on disposal of Maverix amounted to US\$67 million in 2019 and related to the sale of the Group's 19.9% holding in the Toronto-listed gold and royalty streaming company Maverix.

### Proceeds on disposal of investments

Proceeds on the disposal of investments decreased by 80% from US\$113 million in 2019 to US\$23 million in 2020.

The proceeds on disposal of investments of US\$23 million in 2020 related to the disposal of 81 million shares in ASX-listed Cardinal Resources Limited.

The proceeds on disposal of investments of US\$113 million in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Red 5 Limited	21
Gold Road Resources Limited	85
Hummingbird Resources PLC	6
	<b>113</b>

### Loan advanced – contractors

Loan advanced to contractors in Ghana for fleet replacement in 2020 amounted to US\$68 million. These loans are interest bearing, secured and are recoupable over three years (2021 to 2024).

### Contributions to environmental trust funds

The contributions to environmental trust fund increased by 29% from US\$7 million in 2019 to US\$9 million in 2020.

The contributions to environmental trust funds of US\$9 million in 2020 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
South Deep mine environmental trust fund	1
Tarkwa mine environmental trust fund	6
Damang mine environmental trust fund	2
	<b>9</b>

The contributions to environmental trust funds of US\$7 million in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
South Deep mine environmental trust fund	1
Tarkwa mine environmental trust fund	6
	<b>7</b>

### Cash flows from financing activities

Cash outflows from financing activities increased by 33% (US\$35 million) from US\$105 million in 2019 to US\$140 million in 2020. The items comprising these numbers are discussed below.

The movement of US\$35 million was due to:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Decrease in loans raised	(848)
Decrease in loans repaid	590
Increase in payment of lease liability	(26)
Proceeds from the issue of shares – 2020	249
	(35)

### Loans raised

Loans raised decreased by 55% from US\$1,538 million in 2019 to US\$690 million in 2020.

The US\$690 million loans raised in 2020 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
A\$500 million syndicated revolving credit facility – old <sup>1</sup>	86
A\$500 million syndicated revolving credit facility – new <sup>1</sup>	191
US\$1,200 million term loan and revolving credit facilities	413
	690

*Credit facilities financing and refinancing*

<sup>1</sup> On 19 November 2020, Gruyere Holdings Proprietary Limited entered into a new A\$500 million syndicated revolving credit facility. On 23 November 2020, the old A\$500 million syndicated revolving credit facility was refinanced with the new A\$500 million syndicated revolving credit facility and cancelled.

The US\$1,538 million loans raised in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$500 million five-year notes issue <sup>1</sup>	496
US\$500 million 10-year notes issue <sup>1</sup>	496
US\$1,290 million term loan and revolving credit facilities	434
R500 million Standard Bank revolving credit facility	21
Short-term Rand uncommitted credit facilities	91
	1,538

*Credit facilities financing and refinancing*

<sup>1</sup> On 9 May 2019, Gold Fields successfully concluded the raising of two new bonds, a US\$500 million five-year notes issue with a coupon of 5.125% and a US\$500 million 10-year notes issue with a coupon of 6.125%, raising a total of US\$1 billion at an average coupon of 5.625%.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Loans repaid

Loans repaid decreased by 37% from US\$1,604 million in 2019 to US\$1,014 million in 2020.

The US\$1,014 million loans repaid in 2020 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$1 billion notes issue	602
A\$500 million syndicated revolving credit facility – old	249
US\$1,200 million term loan and revolving credit facility	163
	<b>1,014</b>

The US\$1,604 million loans repaid in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$1 billion notes issue – buy-back of US\$250 million notes <sup>1</sup>	255
US\$100 million revolving credit facility	45
A\$500 million syndicated revolving credit facility	144
US\$1,290 million term loan and revolving credit facility	906
R500 million Standard Bank revolving credit facility	35
R500 million Absa Bank revolving credit facility	35
Short-term Rand uncommitted credit facilities	184
	<b>1,604</b>

<sup>1</sup> On 27 May 2019, Gold Fields announced the successful buy back of US\$250 million of the outstanding 2020 notes at 102% of par as compared with a premium of 101.73% of par at the close of business on 24 May 2019. The buy-back of the notes was financed with the proceeds of the raising of two new bonds, the five-year notes and the 10-year notes. The Group recognised a loss of US\$5.0 million on the buy-back of the 2020 notes.

### Payment of lease liabilities

Payment of lease liabilities increased by 68% from US\$38 million in 2019 to US\$64 million in 2020. The increase related mainly to additional leases entered into during 2020.

### Proceeds from the issue of shares

On 12 February 2020 Gold Fields successfully completed the placing of 41,431,635 new ordinary, no par value shares with existing and new institutional investors at a price of ZAR 90.20 per share. The placing issued represented, in aggregate, approximately 5% of the Company's issued ordinary share capital prior to the placing. The placing price represented a discount of 3.8% to the 30 day VWAP prior to 12 February 2020. Gross proceeds of approximately R4 billion (US\$249 million) were raised through the placing.

### Net cash generated

As a result of the above, net cash generated increased by 24% from US\$294 million in 2019 to US\$364 million in 2020.

Cash and cash equivalents increased by 72% from US\$515 million at 31 December 2019 to US\$887 million at 31 December 2020.

### Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares ("net cash flow")

This is a measure that management uses to measure the cash generated by the core business. Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares is defined as net cash from operations adjusted for South Deep BEE dividend, additions to property, plant and equipment, proceeds on disposal of property, plant and equipment, environmental trust funds payments, lease payments and redemption of Asanko preference shares per the statement of cash flows.

The cash inflow increased by 153% from US\$249 million in 2019 to US\$631 million in 2020. The main reasons for the increase was that net cash from operating activities increased by 41% from US\$894 million in 2019 to US\$1,258 million in 2020 mainly due to higher gold sold and higher gold prices. Additions to property, plant and equipment decreased by 5% from US\$613 million in 2019 to US\$584 million in 2020 due to the reasons discussed on pages 109 to 111.

Below is a table reconciling the cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares to the statement of cash flows.

		United States Dollar	
<i>Figures in millions unless otherwise stated</i>		2020	2019
Net cash from operations		1,258	894
South Deep BEE dividend		(1)	(1)
Additions to property, plant and equipment		(584)	(613)
Capital expenditure – working capital		(7)	–
Proceeds on disposal of property, plant and equipment		1	4
Environmental trust funds and rehabilitation payments		(9)	(7)
Lease payments		(65)	(38)
Redemption of Asanko preference shares		38	10
<b>Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares</b>		<b>631</b>	<b>249</b>

Below is a table providing a breakdown of how the cash was generated by the Group.

		United States Dollar	
<i>Figures in millions unless otherwise stated</i>		2020	2019
Net cash generated by mines		868	414
Salares Norte <sup>1</sup>		(151)	(55)
Interest paid by corporate entities <sup>2</sup>		(92)	(86)
Redemption of Asanko preference shares		38	10
Other corporate costs		(32)	(34)
<b>Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares</b>		<b>631</b>	<b>249</b>

<sup>1</sup> The Salares Norte expenditure of US\$151 million comprises exploration expenditure of US\$30 million, capital expenditure of US\$97 million and investment into working capital of US\$24 million.

<sup>2</sup> Does not agree to interest paid per the cash flow of US\$127 million (2019: US\$132 million) due to interest paid by the mines reflected under net cash generated by mines before growth capital.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### LIQUIDITY AND CAPITAL RESOURCES – YEARS ENDED 31 DECEMBER 2019 AND 31 DECEMBER 2018

#### CASH RESOURCES

##### Cash flows from operating activities

Cash inflows from operating activities increased by 49% (US\$276 million) from US\$569 million in 2018 to US\$845 million in 2019. The items comprising these are discussed below.

The increase of US\$276 million was due to:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Increase in cash generated from operations due to higher gold sold and higher gold price	305
Decrease in investment in working capital	7
Silicosis payment	(5)
Increase in interest paid mainly due to adoption of IFRS 16 Leases	(41)
Increase in royalties paid	(7)
Decrease in taxes paid	9
Decrease in dividends paid due to lower dividends paid to non-controlling interests	8
	276

Dividends paid decreased from US\$57 million in 2018 to US\$49 million in 2019. The dividends paid of US\$49 million in 2019 comprised dividends paid to ordinary shareholders of US\$46 million, dividends paid to non-controlling interests in Ghana and Peru of US\$2 million and South Deep BEE dividend of US\$1 million.

The dividends paid of US\$57 million in 2018 comprised dividends paid to ordinary shareholders of US\$45 million, dividends paid to non-controlling interests in Ghana and Peru of US\$10 million and South Deep BEE dividend of US\$2 million.

##### Cash flows from investing activities

Cash outflows from investing activities decreased by 50% (US\$440 million) from US\$887 million in 2018 to US\$447 million in 2019.

The decrease of US\$440 million was due to:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Decrease in additions to property, plant and equipment	201
Decrease in proceeds on disposal of property, plant and equipment	(75)
Purchase of Asanko Gold	145
Decrease in purchase of investments	13
Redemption of Asanko preference shares – 2019	10
Proceeds on disposal of subsidiary – 2019	6
Proceeds on disposal of Maverix – 2019	67
Increase in proceeds on disposal of investments	112
Proceeds on disposal of APP – 2018	(40)
Decrease in environmental trust funds and rehabilitation payments	1
	440

## Additions to property, plant and equipment

Capital expenditure decreased by 25% from US\$814 million in 2018 to US\$613 million in 2019.

### United States Dollar

Figures in million unless otherwise stated	2019			2018		
	Sustaining capital	Growth capital	Total capital	Sustaining capital	Growth capital	Total capital

<b>Capital expenditure (excluding Asanko)</b>	475	138	613	524	290	814

<sup>1</sup> Equity-accounted joint venture.

Capital expenditure at South Deep in South Africa decreased by 38% from R770 million (US\$58 million) in 2018 to R479 million (US\$33 million) in 2019. The capital expenditure of R479 million (US\$33 million) in 2019 comprised only sustaining capital expenditure. The capital expenditure of R770 million (US\$58 million) in 2018 comprised R528 million (US\$40 million) sustaining capital and R242 million (US\$18 million) growth capital.

- This decrease was driven by the decrease in non-sustaining capital expenditure, which was communicated as part of the restructuring at the end of 2018 with the temporary suspension of New Mine development in 2019.

Capital expenditure at the Ghanaian operations (excluding Asanko) decreased by 32% from US\$295 million in 2018 to US\$202 million in 2019:

- Tarkwa decreased by 19% from US\$156 million in 2018 to US\$126 million in 2019 mainly due to the lower capital waste stripping expenditure in line with the 2019 plan. All capital related to sustaining capital;
- Damang decreased by 45% from US\$139 million in 2018 to US\$76 million in 2019 due to lower capital waste tonnes mined. The capital expenditure of US\$76 million in 2019 comprised US\$5 million sustaining capital and US\$71 million growth capital. The capital expenditure of US\$139 million in 2018 comprised US\$14 million sustaining capital and US\$125 million growth capital; and
- Asanko incurred total capital expenditure of US\$13 million for the five months ended December 2018 compared to US\$27 million for the 12 months ended December 2019. The capital expenditure of US\$27 million in 2019 comprised US\$20 million sustaining capital expenditure and US\$7 million growth capital. The capital expenditure of US\$13 million in 2018 comprised sustaining capital expenditure of US\$8 million and non-sustaining capital expenditure of US\$5 million. (Asanko is an equity-accounted joint venture and not included in the Group or Ghanaian operation's figures.)

Capital expenditure at Cerro Corona in Peru increased by 70% from US\$33 million in 2018 to US\$56 million in 2019. All capital related to sustaining capital:

- The increase was due to higher expenditure resulting from the new waste storage facility construction and infrastructure relocation (access roads, blasting supplies warehouse, general warehouse, etc) expenses for the life extension plan.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

Capital expenditure at the Australian operations decreased by 17% from A\$553 million (US\$413 million) in 2018 to A\$458 million (US\$318 million) in 2019:

- St Ives decreased by 17% from A\$170 million (US\$127 million) in 2018 to A\$141 million (US\$98 million) in 2019 due to reduced stripping at the open pits combined with lower spend on mining infrastructure in 2019. All capital related to sustaining capital;
- Agnew increased by 11% from A\$98 million (US\$73 million) in 2018 to A\$109 million (US\$76 million) in 2019. Additional expenditure was incurred in 2019 to establish the new accommodation village with A\$32 million spent on the village in 2019 compared to A\$8 million in 2018. The additional expenditure was partially offset by lower capital development in 2019 following the completion of the first phase of development of the Waroonga North complex early in the year. All capital related to sustaining capital;
- Granny Smith decreased by 1% from A\$105 million (US\$79 million) in 2018 to A\$104 million (US\$72 million) in 2019. The majority of capital expenditure related to development and infrastructure at the Wallaby mine, exploration and the development of a paste plant and associated infrastructure. All capital related to sustaining capital; and
- Capital expenditure at Gruyere decreased by 42% from A\$180 million (US\$134 million) in 2018 to A\$104 million (US\$72 million) in 2019 due to the completion of the construction project. The capital expenditure of A\$104 million (US\$72 million) in 2019 comprised A\$8 million (US\$5 million) sustaining capital and A\$96 million (US\$67 million) growth capital. The capital expenditure of A\$180 million (US\$134 million) in 2018 related only to growth capital.

### Proceeds on disposal of property, plant and equipment

Proceeds on the disposal of property, plant and equipment decreased by 95% from US\$79 million in 2018 to US\$4 million in 2019. In 2019, the proceeds related mainly to the disposal of various redundant assets. In 2018, the proceeds related mainly to the disposal of fleet in Tarkwa of US\$73 million as part of the conversion to contractor mining and the balance related to the sale of various redundant assets.

### Purchase of Asanko Gold

Purchase of Asanko decreased by 88% from US\$165 million in 2018 to US\$20 million in 2019. Purchase of Asanko of US\$165 million in 2018 related to the JV transaction with Galiano (previously Asanko) which was completed on 31 July 2018. Gold Fields acquired a 50% stake in Asanko's 90% interest in the Asanko Gold Mine in Ghana. Purchase of Asanko of US\$20 million in 2019 related to the additional purchase of preference share in accordance with the JV transaction.

### Purchase of investments

Investment purchases decreased by 63% from US\$19 million in 2018 to US\$7 million in 2019.

The purchase of investments of US\$7 million in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>		United States Dollar
Chakana Copper		7

The purchase of investments of US\$19 million in 2018 comprised:

<i>Figures in millions unless otherwise stated</i>		United States Dollar
Asanko Gold Inc		18
Lefroy Exploration Limited		1
		19

### Redemption of Asanko preference shares

Redemption of Asanko preference shares amounted to US\$10 million in 2019.

### Proceeds on disposal of subsidiary

Proceeds on disposal of subsidiary amounted to US\$6 million in 2019 and related to the sale of Norperuna.

### Proceeds on disposal of Maverix

Proceeds on disposal of Maverix amounted to US\$67 million in 2019 and related to the sale of the Group's 19.9% holding in the Toronto-listed gold and royalty streaming company Maverix.

### Proceeds on disposal of investments

Proceeds on the disposal of investments increased by 112% from US\$1 million in 2018 to US\$113 million in 2019.

The proceeds on disposal of investments of US\$113 million in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Red 5 Limited	21
Gold Road Resources Limited	85
Hummingbird Resources PLC	6
	113

The proceeds on disposal of investments of US\$1 million in 2018 related to the disposal of various investments.

### Proceeds on disposal of APP

On 24 January 2018, Gold Fields sold APP to a Finnish subsidiary of private equity fund CD Capital Natural Resources Fund III for US\$40 million.

### Contributions to environmental trust funds

The contributions to environmental trust fund decreased by 13% from US\$8 million in 2018 to US\$7 million in 2019.

The contributions to environmental trust funds of US\$7 million in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
South Deep mine environmental trust fund	1
Tarkwa mine environmental trust fund	6
	7

The contributions to environmental trust funds of US\$8 million in 2018 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
South Deep mine environmental trust fund	1
Tarkwa mine environmental trust fund	7
	8

### Cash flows from financing activities

Cash inflows from financing activities was an outflow of US\$105 million in 2019 compared to an inflow of US\$152 million in 2018. The items comprising these numbers are discussed below.

The movement of US\$257 million was due to:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
Increase in loans raised	848
Increase in loans repaid	(1,069)
Increase in payment of lease liability	(36)
	257

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### Loans raised

Loans raised increased by 123% from US\$690 million in 2018 to US\$1,538 million in 2019.

The US\$1,538 million loans raised in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$500 million five-year notes issue <sup>1</sup>	496
US\$500 million 10-year notes issue <sup>1</sup>	496
US\$1,290 million term loan and revolving credit facilities	434
R500 million Standard Bank revolving credit facility	21
Short-term Rand uncommitted credit facilities	91
	1,538

*Credit facilities financing and refinancing:*

<sup>1</sup> On 9 May 2019, Gold Fields successfully concluded the raising of two new bonds, a US\$500 million five-year notes issue with a coupon of 5.125% and a US\$500 million 10-year notes issue with a coupon of 6.125%, raising a total of US\$1 billion at an average coupon of 5.625%.

The US\$690 million loans raised in 2018 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
A\$500 million syndicated revolving credit facility	120
US\$1,290 million term loan and revolving credit facilities	383
R1,500 million Nedbank revolving credit facility	21
R500 million Standard Bank revolving credit facility <sup>1</sup>	14
R500 million Absa Bank revolving credit facility <sup>2</sup>	36
Short-term Rand uncommitted credit facilities	116
	690

*Credit facilities financing and refinancing:*

<sup>1</sup> On 27 March 2017, Gold Fields Operations Limited and GFI Joint Venture Holdings Proprietary Limited entered into a R500 million revolving credit facility with the Standard Bank of South Africa Limited which became available on 31 March 2017. The purpose of this facility was to fund (i) capital expenditure of the Gold Fields Group, and (ii) general corporate and working capital requirements of the Gold Fields Group. The final maturity date of this facility is three years from the financial close date, namely 31 March 2020. The Group only drew down under this facility in 2018.

<sup>2</sup> On 27 March 2017, Gold Fields Operations Limited and GFI Joint Venture Holdings Proprietary Limited entered into a R500 million revolving credit facility with Absa Bank Limited which became available on 31 March 2017. The purpose of this facility was to fund (i) capital expenditure of the Gold Fields Group, and (ii) general corporate and working capital requirements of the Gold Fields Group. The final maturity date of this facility is three years from the financial close date, namely 31 March 2020. The Group only drew down under this facility in 2018.

### Loans repaid

Loans repaid increased by 199% from US\$536 million in 2018 to US\$1,604 million in 2019.

The US\$1,604 million loans repaid in 2019 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$1 billion notes issue – buy-back of US\$250 million notes <sup>1</sup>	255
US\$100 million revolving credit facility	45
A\$500 million syndicated revolving credit facility	144
US\$1,290 million term loan and revolving credit facility	906
R500 million Standard Bank revolving credit facility	35
R500 million Absa Bank revolving credit facility	35
Short-term Rand uncommitted credit facilities	184
	1,604

<sup>1</sup> On 27 May 2019, Gold Fields announced the successful buy back of US\$250 million of the outstanding 2020 notes at 102% of par as compared with a premium of 101.73% of par at the close of business on 24 May 2019. The buy-back of the notes was financed with the proceeds of the raising of two new bonds, the five-year notes and the 10-year notes. The Group recognised a loss of US\$5.0 million on the buy-back of the 2020 notes.

The US\$536 million loans repaid in 2018 comprised:

<i>Figures in millions unless otherwise stated</i>	United States Dollar
US\$1,290 million term loan and revolving credit facility	291
R1,500 million Nedbank revolving credit facility	108
Short-term Rand uncommitted credit facilities	137
	536

### Payment of lease liabilities

Payment of lease liabilities increased by 1167% from US\$3 million in 2018 to US\$38 million in 2019. The increase related to the adoption of IFRS 16 Leases in 2019.

### Net cash generated/(utilised)

As a result of the above, net cash generated of US\$294 million in 2019 compared to net cash utilised of US\$167 million in 2018.

Cash and cash equivalents increased by 134% from US\$220 million at 31 December 2018 to US\$515 million at 31 December 2019.

### Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares (“net cash flow”)

This is a measure that management uses to measure the cash generated by the core business. Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares is defined as net cash from operations adjusted for South Deep BEE dividend, additions to property, plant and equipment, proceeds on disposal of property, plant and equipment, environmental trust funds payments, lease payments and redemption of Asanko preference shares per the statement of cash flows.

The cash inflow of US\$249 million in 2019 compared to an outflow of US\$122 million in 2018. The main reasons for the increase was that net cash from operations increased by 43% from US\$626 million in 2018 to US\$894 million in 2019 mainly due to higher gold sold and higher gold prices. Additions to property, plant and equipment decreased by 25% from US\$814 million in 2018 to US\$613 million in 2019 due to a decrease in capital across all operations.

Below is a table reconciling the cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares to the statement of cash flows.

<i>Figures in millions unless otherwise stated</i>	United States Dollar	
	2019	2018
Net cash from operations	894	626
South Deep BEE dividend	(1)	(2)
Additions to property, plant and equipment	(613)	(814)
Proceeds on disposal of property, plant and equipment	4	79
Environmental trust funds and rehabilitation payments	(7)	(8)
Lease payments	(38)	(3)
Redemption of Asanko preference shares	10	–
<b>Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares</b>	<b>249</b>	<b>(122)</b>

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

Below is a table providing a breakdown of how the cash was generated/(utilised) by the Group.

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2019	2018
Net cash generated by mines before growth capital	552	345
Damang growth capital	(71)	(125)
South Deep growth capital	–	(18)
Gruyere growth capital <sup>1</sup>	(67)	–
<b>Net cash generated after growth capital</b>	<b>414</b>	<b>202</b>
Gruyere project capital <sup>1</sup>	–	–
Salares Norte	(55)	–
Other exploration	(5)	(5)
Interest paid by corporate entities <sup>2</sup>	(86)	(77)
Other corporate costs and South Deep BEE dividend	(19)	(31)
<b>Cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares</b>	<b>249</b>	<b>(122)</b>

<sup>1</sup> The Gruyere project was successfully completed during 2019, with first gold produced in June 2019. Commercial levels of production were achieved at the end of September 2019 and was included in the Australian operations from that date.

<sup>2</sup> Does not agree to interest paid per the cash flow of US\$132 million (2018: US\$91 million) due to interest paid by the mines reflected under net cash generated by mines before growth capital.

### STATEMENT OF FINANCIAL POSITION

#### Borrowings

Total borrowings (short and long-term borrowings) decreased from US\$1,846 million at 31 December 2019 to US\$1,527 million at 31 December 2020. Net debt is defined as total borrowing plus lease liabilities less cash and cash equivalents. Net debt decreased from US\$1,664 million at 31 December 2019 to US\$1,069 million at 31 December 2020 due to lower borrowings and higher cash and cash equivalents. Net debt (excluding lease liabilities) decreased from US\$1,331 million at 31 December 2019 to US\$640 million at 31 December 2020 for the same reasons discussed above.

The Group monitors capital using the ratio of net debt to adjusted EBITDA. Adjusted EBITDA is defined as profit or loss for the year adjusted for interest, taxation, amortisation and depreciation and certain other costs. The definition of adjusted EBITDA is as defined in the US\$1,200 million term loan and revolving credit facilities agreement. The Group's long-term target is a ratio of net debt to adjusted EBITDA of one times or lower. The bank covenants on external borrowings require a net debt to adjusted EBITDA ratio of 3.5 or below and the ratio is measured based on amounts in United States Dollar. Net debt to adjusted EBITDA at 31 December 2020 was 0.56 (2019: 1.29). Refer to note 39 of the consolidated financial statements for further details including the reconciliation of profit for the year to adjusted EBITDA.

#### Provisions

Total provisions increased by 2% from US\$396 million in 2019 to US\$403 million in 2020 and included the following:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
Provision for environmental rehabilitation costs	<b>382</b>	370
Silicosis settlement costs	<b>18</b>	21
Other provisions	<b>3</b>	4
<b>Total provisions</b>	<b>403</b>	396
Current portion of provision <sup>1</sup>	<b>(24)</b>	(5)
<b>Non-current portion of provisions</b>	<b>379</b>	391

<sup>1</sup> Current portion of provision comprises US\$20 million (2019: US\$nil) of the current portion of the environmental rehabilitation costs and US\$4 million (2019: US\$5 million) of the current portion of the silicosis settlement costs.

### Provision for environmental rehabilitation costs

The amount provided for environmental rehabilitation costs increased by 3% from US\$370 million at 31 December 2019 to US\$382 million at 31 December 2020. The increase is due to the increase of the gross environmental rehabilitation costs at all the operations in 2020. This provision represents the present value of closure, rehabilitation and other environmental obligations up to 31 December 2020. This provision is updated annually to take account of inflation, the time value of money and any new environmental obligations incurred.

The inflation and range of discount rates applied in 2020 and 2019 for each region are shown in the table below:

	South Africa	Ghana	Australia	Peru	Chile
<b>Inflation rates</b>					
<b>2020</b>	<b>4.8%</b>	<b>2.2%</b>	<b>2.5%</b>	<b>2.2%</b>	<b>2.2%</b>
2019	5.4%	2.5%	2.5%	2.5%	2.5%
<b>Discount rates</b>					
<b>2020</b>	<b>10.8%</b>	<b>6.7% – 7.2%</b>	<b>2.5%</b>	<b>2.2%</b>	<b>2.2%</b>
2019	10.3%	7.7% – 7.9%	1.2% – 1.6%	3.0%	2.6%

The interest charge decreased marginally from US\$12 million in 2019 to US\$11 million in 2020.

Adjustments for new disturbances and changes in environmental legislation during 2020 and 2019, after applying the above inflation and discount rates were:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
South Africa	(1)	–
Ghana	(4)	22
Australia	(16)	41
Peru	13	17
Chile	2	–
<b>Total</b>	<b>(5)</b>	<b>80</b>

The South African and Ghanaian operations contribute to a dedicated environmental trust fund and a dedicated bank account, respectively, to provide financing for final closure and rehabilitation costs. The amount invested in the fund is shown as a non-current asset in the financial statements and increased from US\$70 million at 31 December 2019 to US\$79 million at 31 December 2020. The increase is mainly as a result of contributions amounting to US\$9 million and interest income of US\$1 million. The South African and Ghanaian operations are required to contribute annually to the trust fund over the remaining lives of the mines, to ensure that sufficient funds are available to discharge commitments for future rehabilitation costs.

### Silicosis settlement costs provision

The principal health risks associated with Gold Fields' mining operations in South Africa arise from occupational exposure to silica dust, noise, heat and certain hazardous chemicals. The most significant occupational diseases affecting Gold Fields' workforce include lung diseases (such as silicosis, tuberculosis, a combination of the two and chronic obstructive airways disease ("COAD")) as well as noise-induced hearing loss ("NIHL").

A consolidated application was brought against several South African mining companies, including Gold Fields, for certification of a class action on behalf of current or former mineworkers (and their dependants) who have allegedly contracted silicosis and/or tuberculosis while working for one or more of the mining companies listed in the application.

The Settlement Agreement in the silicosis and tuberculosis class action litigation became operational on 10 December 2019. A settlement trust, known as the Tshiamiso Trust, has been established to carry out the terms of the Settlement Agreement and is responsible for ensuring that all eligible current and former mineworkers across southern Africa with silicosis or work-related TB (or their dependants where the mineworker has passed away) are compensated. The board of trustees is chaired by Professor May Hermanus as an independent trustee.

Over the course of 2020, the Tshiamiso Trust worked to create the capacity and establish the systems to begin to deliver on its mandate. However, the Covid-19 pandemic has had a significant impact on the work of the Trust. During October 2020, the Trust identified a test group of potential claimants. On 3 December 2020, the Trust made its first payments to six of these claimants. Each recipient received R250 000.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

Gold Fields has provided for the estimated cost of the class action settlement based on actuarial assessments and the provisions of the Settlement Agreement. At 31 December 2020, the total provision for Gold Fields' share of the settlement of the class action claims and related costs amounts to US\$18 million (R269 million) (2019: US\$21 million (R297 million)) of which US\$4 million (R58 million) (2019: US\$5 million (R64 million)) was classified as current and US\$14 million (US\$211 million) (2019: US\$17 million (R233 million)) as non-current. The nominal value of this provision is US\$23 million (R339 million) at 31 December 2020.

The assumptions that were made in the determination of the provision include silicosis prevalence rates, estimated settlement per claimant, benefit take-up rates and disease progression rates. A discount rate of 6.67% (2019: 10.08%) was used, based on government bonds with similar terms to the anticipated settlements.

The ultimate outcome of this matter however remains uncertain, with the number of eligible workers successfully submitting claims and receiving compensation being uncertain. The provision is consequently subject to adjustment in the future. Refer to notes 25.2 and 35 of the consolidated financial statements for further details.

### Other long-term provisions

Other long-term provisions decreased from US\$4 million at 31 December 2019 to US\$3 million at 31 December 2020.

### Credit facilities

At 31 December 2020, the Group had unutilised committed banking facilities available under the following facilities, details of which are discussed in note 24:

- US\$950 million available under the US\$1,200 million revolving credit facilities;
- US\$67 million available under the US\$150 million revolving senior secured credit facility;
- US\$100 million available under the US\$100 million senior secured revolving credit facility;
- A\$240 million (US\$185 million) under the A\$500 million syndicated revolving credit facility;
- R1,500 million (US\$102 million) available under the R1,500 million Nedbank revolving credit facility;
- R500 million (US\$34 million) available under the R500 million Absa Bank revolving credit facility; and
- R500 million (US\$34 million) available under the R500 million Rand Merchant Bank revolving credit facility.

Substantial contractual arrangements for uncommitted borrowing facilities are maintained with several banking counterparties to meet the Group's normal contingency funding requirements.

As of the date of this report, the Group was not in default under the terms of any of its outstanding credit facilities.

## Contractual obligations, commitments and guarantees at 31 December 2020

### Guarantees

Guarantees consist of numerous obligations. Guarantees consisting of US\$191.8 million committed to guarantee Gold Fields' environmental and other obligations with respect to its South African, Peruvian, Ghanaian and Australian operations are fully provided for under the provision for environmental rehabilitation and certain lease liabilities and are not included in the amount above.

### Working capital

Following its going concern assessment performed, which takes into account the 2020 operational plan, net debt position and unutilised loan facilities, management believes that Gold Fields' working capital resources, by way of internal sources and banking facilities, are sufficient to fund Gold Fields' currently foreseeable future business requirements.

### Off-balance sheet items

At 31 December 2020, Gold Fields had no material off-balance sheet items except for as disclosed under guarantees and capital commitments.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

### INFORMATION COMMUNICATION AND TECHNOLOGY ("ICT")

ICT at Gold Fields is a strategic enablement partner to the Group. ICT is focused on ensuring that the technology adopted remains relevant in enabling the business to execute the strategy and the operational plans while ensuring that all the Group information and technology assets are adequately protected.

During the course of 2020, ICT was focused on the following key objectives:

- Establishing a suitable response programme to the Covid-19 pandemic and supporting the business to enable the respective Covid-19 protocols;
- Implementing the necessary tools and technologies to enable a seamless transition to work remotely;
- Enforcing a more robust cybersecurity posture to deal with the increase in cyberattacks;
- Maintaining an improved ICT governance environment and achieving operational targets;
- Ensuring key systems and infrastructure availability and performance;
- Prioritising and implementing key components of the approved ICT digital strategy, specifically accelerating those initiatives that support the Group's Covid-19 response; and
- Maintaining sound financial management and sustaining cost savings.

Gold Fields' vision to be the global leader in sustainable gold mining requires the adaptability to respond to the rapidly changing technology environment. This was achieved through ensuring that the foundational technology and digital elements of the mine of the future are in place across the various operations. As a result of the Covid-19 pandemic, ICT focused on prioritising initiatives from the strategy, based on Gold Fields response to the Covid-19 pandemic, and continued to maintain its focus and attention on the execution of the required activities to achieve successful outcomes following a three-phase plan, being Respond, Recover and Thrive.

The Covid-19 global pandemic has continued to evolve the way we work, and each of the regions in which we operate have experienced varying levels of virus spread and associated restrictions on business. Some regions have experienced a relaxation of the lockdowns, while others have had increased restrictions based on the resurgence of infections. Our sites have established suitable protocols that include social distancing, tracking and tracing as well as health screening and many of these protocols are enabled by Gold Fields ICT Systems.

The Respond phase was initiated through the following activities:

Established a Covid-19 ICT Emergency Management Committee which consisted of regional ICT leadership as well as critical business partners and service providers:

- Reviewed the risk assessment that was previously completed, in accordance with the four ICT Risk Themes (Disruption of service, Loss of Data, Compliance and Cyber Security) to ensure that relevant risks were consistently mitigated;
- Enabled and continued to support remote working systems and processes;
- Ensured that critical spares are available for emergency deployment in the event of an infrastructure failure; and
- Maintained an enhanced focus on cybersecurity.

Remote working and collaborating utilising virtual platforms has been relatively seamless and the adoption of technology has increased significantly.

The Covid-19 ICT Emergency Management Committee began the execution of the Recovery phase which includes:

- Accelerating the adoption of more robust business continuity mechanisms;
- Reviewing ICT projects and initiatives and identifying possible impactful business initiatives. The identified impactful initiatives include the enhancement of the Gold Fields network architecture as well as the migration of critical systems to the cloud;
- Reviewing ICT budgets and maintaining alignment to the financial plan;
- Assessing the Gold Fields ICT Digital Strategy for relevance to a post Covid-19 world of business;
- Redefining the ICT delivery model and the conceptualising of ICT 2.0 reflecting the new normal;
- Continuing to monitor the changing ICT Risk landscape and implementing necessary mitigating actions; and
- Maintaining a level of vigilance and threat readiness to respond to cyberattacks.

The Covid-19 ICT Emergency Management Committee conducted the planning of the Thrive phase including:

- Assessing the ICT Delivery Model and redesigning ICT to ICT 2.0 which aligns to the Digital Strategy and the future of work. ICT 2.0 focuses on recalibrating the internal ICT Operations and Processes to thrive in the new normal, ensuring improved efficiency and productivity. The focus of ICT 2.0 will be on making ICT more digitally focused, highly governed, cyber-resilient and enhancing automation across the ICT processes.

Following the establishment of the Innovation and Technology vision and the approval of the Gold Fields ICT digital strategy, ICT conducted various strategic programmes across the Group with the following themes:

- Digital infrastructure: Laying the foundation of an infrastructure to enable a connected mine and facilitate the successful flow of data. The implementation of advanced digital infrastructure, is ongoing across each operation;
- Information technology (“IT”) and operational technology (“OT”) convergence: Enabling the convergence of information and operational technology under a unified architecture, standards, governance and cybersecurity framework. An assessment of the OT environment was completed and a roadmap with identified areas for Convergence was established;
- Data analytics: Creating the platform for the use of data to move from a data driven to an insights driven organisation. Selected data analytics initiatives were concluded with further use case being defined for each of the regions;
- Cybersecurity: Ensuring the protection of information and assets. The Security Event and Incident Management (“SEIM”) system as well as associated cybersecurity monitoring was implemented and embedded across the Group and was enhanced to remain relevant to the changing threat landscape;
- Digital Value Office (“DVO”): Establishing a suitably governed delivery mechanism for the execution of initiatives that forms part of the digital strategy. The design of the DVO was concluded with all regions having provided their input into the design. The DVO will continue to ramp up as projects and initiatives are checked into the DVO;
- People Management: implementing suitable people related platforms to enhance the future of work: The initial implementation of a baseline people platform facilitated remote working and an enhanced employee experience. Ongoing improvements and the adoption of new functionality progressed since the initial implementation; and
- ICT 2.0: Gold Fields’ ICT operating and delivery model, which is based on industry best practice, was enhanced to position ICT to effectively deliver on the digital strategy. This operating model enables ICT to focus on business imperatives and business support, while the non-core services are outsourced. The operating model enhancements and delivery against key strategic targets for 2020 mitigated key technology risks and exposed technology opportunities to enable the rapid deployment of digital technologies.

#### **INTERNAL CONTROL OVER FINANCIAL REPORTING**

Gold Fields’ management is responsible for establishing and maintaining adequate internal control over financial reporting. The Securities Exchange Act of 1934 defines internal control over financial reporting in Rule 13a-15(f) and 15d-15(f) as a process designed by, or under the supervision of, the company’s principal executive and principal financial officers, and effected by the Company’s Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS, as issued by the IASB, and includes those policies and procedures that:

- Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, as issued by the IASB, and that receipts and expenditures of the Company are being made only in accordance with authorisations of management and Directors of the Company; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use or disposition of the company’s assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Gold Fields’ management assessed the effectiveness of its internal control over financial reporting as of 31 December 2020. In making this assessment, Gold Fields’ management used the criteria established in Internal Control-Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based upon its assessment, Gold Fields’ management concluded that, as of 31 December 2020, its internal control over financial reporting is effective based upon those criteria.

#### **TREND AND OUTLOOK**

As previously guided, 2021 is going to be a big capital expenditure year for Gold Fields, given the peak spending at Salares Norte as well as the increase in sustaining capital for the Group. This increase in sustaining capital will enable the Group to spend on key projects that will allow us to sustain production base of 2.00 million ounces to 2.50 million ounces for the next eight to 10 years.

The Covid-19 pandemic is expected to continue to impact our lives and businesses in 2021, with many parts of the world experiencing second waves. The effective roll-out of the vaccine creates additional uncertainty.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE FINANCIAL STATEMENTS continued

For 2021, attributable gold equivalent production is expected to be between 2.30 million ounces and 2.35 million ounces. AISC is expected to be between US\$1,020 per ounce and US\$1,060 per ounce, with AIC expected to be US\$1,310 per ounce to US\$1,350 per ounce. If we exclude the very significant project capex at Salares Norte, AIC is expected to be US\$1,090 per ounce to US\$1,130 per ounce. The exchange rates used for our 2021 guidance are: R/US\$15.50 and US\$/A\$0.75.

Total capex for the Group for the year is expected to be US\$1.177 billion. Sustaining capital is expected to be US\$538 million, with non-sustaining capital expected to be US\$639 million. The largest component of the capital expenditure budget for the year is Salares Norte, with the US\$508 million expected to be spent. We expect Salares Norte to be at 70% completion by the end of 2021.

The other increases are driven by specific projects at some of our core operations. These include the development of a second decline at the Wallaby Underground mine at Granny Smith (A\$51 million), plant modifications and increased development at Agnew to enhance the longer-term outlook (A\$38 million), and finally increased new mine development, tailings facility expansion and underground infrastructure expenditure at South Deep (US\$22 million).

### COVID-19 IMPACT ON PRODUCTION

Group production and costs have been flexed for inherent operating risks which relate to all or some of the mines. The risk of stoppages due to Covid-19 has not been factored into any guidance estimates in the Group. The extent to which Covid-19 impacts on either production or costs is indeterminable at this stage.

The above is subject to safety performance which limits the impact of safety-related stoppages and the forward looking statement on page 1 of the Integrated Annual Report.

# INDEPENDENT AUDITOR'S REPORT

To the Shareholders of Gold Fields Limited

## REPORT ON THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS

### Our opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the consolidated financial position of Gold Fields Limited (the Company) and its subsidiaries (together the Group) as at 31 December 2020, and its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa.

### What we have audited

Gold Fields Limited's consolidated financial statements set out on pages 133 to 216 comprise:

- the consolidated statement of financial position at 31 December 2020;
- the consolidated income statement for the year then ended;
- the consolidated statement of comprehensive income for the year then ended;
- the consolidated statement of changes in equity for the year then ended;
- the consolidated statement of cash flows for the year then ended; and
- the notes to the consolidated financial statements, which include a summary of significant accounting policies.

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the consolidated financial statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Independence

We are independent of the Group in accordance with the Independent Regulatory Board for Auditors' Code of Professional Conduct for Registered Auditors (IRBA Code) and other independence requirements applicable to performing audits of financial statements in South Africa. We have fulfilled our other ethical responsibilities in accordance with the IRBA Code and in accordance with other ethical requirements applicable to performing audits in South Africa. The IRBA Code is consistent with the corresponding sections of the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards).

### Our audit approach

#### Overview

#### Overall group materiality

- Overall group materiality: US\$ 58.9 million, which represents 5% of consolidated profit before taxation.

#### Group audit scope

- Full scope audit procedures were conducted over eleven entities located in Ghana, Australia, South Africa and Peru due to their financial significance to the Group. Specified procedures were performed on a further four entities located in Chile, Ghana and South Africa, based on the audit risk associated with these entities.

#### Key audit matters

- Impairment assessment of the South Deep cash-generating unit.

As part of designing our audit, we determined materiality and assessed the risks of material misstatement in the consolidated financial statements. In particular, we considered where the directors made subjective judgements; for example, in respect of significant accounting estimates that involved making assumptions and considering future events that are inherently uncertain. As in all of our audits, we also addressed the risk of management override of internal controls, including among other matters, consideration of whether there was evidence of bias that represented a risk of material misstatement due to fraud.

## INDEPENDENT AUDITOR'S REPORT continued

### Materiality

The scope of our audit was influenced by our application of materiality. An audit is designed to obtain reasonable assurance whether the financial statements are free from material misstatement. Misstatements may arise due to fraud or error. They are considered material if individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the consolidated financial statements.

Based on our professional judgement, we determined certain quantitative thresholds for materiality, including the overall group materiality for the consolidated financial statements as a whole as set out in the table below. These, together with qualitative considerations, helped us to determine the scope of our audit and the nature, timing and extent of our audit procedures and to evaluate the effect of misstatements, both individually and in aggregate on the consolidated financial statements as a whole.

<b>Overall group materiality</b>	US\$ 58.9 million.
<b>How we determined it</b>	5% of consolidated profit before taxation.
<b>Rationale for the materiality benchmark applied</b>	We chose consolidated profit before taxation as the most appropriate benchmark, because, in our view, it is the benchmark against which the performance of the Group is most commonly measured by users and is a generally accepted benchmark. We chose 5% which is consistent with quantitative materiality thresholds used for profit-oriented companies in this sector.

### How we tailored our group audit scope

We tailored the scope of our audit in order to perform sufficient work to enable us to provide an opinion on the consolidated financial statements as a whole, taking into account the structure of the Group, the accounting processes and controls, and the industry in which the Group operates.

Components that contributed significantly to consolidated revenue, consolidated profit before tax and consolidated total assets were subject to full scope audits. Full scope audit procedures were conducted over eleven entities located in Ghana, Australia, South Africa and Peru due to their financial significance. Specified procedures were performed on a further four entities located in Chile, Ghana and South Africa, based on the audit risk associated with these entities.

Detailed group audit instructions were communicated to all component auditors from other PwC network firms, in scope for purposes of group reporting. The component auditors reported the results of procedures performed to the group engagement team. We had various interactions with the component auditors, in which we discussed and evaluated recent developments, the scope of procedures, audit risks, materiality and our audit approach. We reviewed selected component working papers. We also discussed with the component auditors, their reports, the findings of their procedures and other matters which could be of relevance for the consolidated financial statements, to be able to conclude whether sufficient appropriate audit evidence has been obtained as a basis for our opinion on the consolidated financial statements as a whole.

### Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period. These matters were addressed in the context of our audit of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key audit matter	How our audit addressed the key audit matter
<p><b>Impairment assessment of the South Deep cash-generating unit (“CGU”)</b></p> <p>Refer to note 1 of the accounting policies (Basis of Preparation - Significant accounting judgements and estimates) and note 7 to the consolidated financial statements (Impairment, net of reversal of impairment of investments and assets). The Group reviews and tests the carrying value of long-lived assets for impairment annually or when events or changes in circumstances suggest the carrying amount of each cash-generating unit (“CGU”) may not be recoverable.</p> <p>Significant impairments were recorded in relation to the South Deep CGU in prior years. The carrying value of the South Deep CGU amounts to US\$1.4 billion at 31 December 2020. No impairment, or reversal of impairment of the South Deep CGU was recorded in 2020.</p> <p>The recoverable amount of the South Deep CGU is determined using fair value less cost of disposal (“FVLCO”).</p> <p>Management’s estimates related to future cash flows include significant judgements and assumptions related to:</p> <ul style="list-style-type: none"> <li>• Rand gold price per kilogram;</li> <li>• Discount rate;</li> <li>• Inflation rate;</li> <li>• Life-of-mine (based on reserves and production estimates);</li> <li>• Long-term foreign exchange rate;</li> <li>• Resource valuation - with infrastructure (determined based on comparable market transactions with reference to value per ounce and used to calculate the value beyond proven and probable reserves); and</li> <li>• Estimates of costs to produce reserves and future capital expenditure.</li> </ul> <p>Management engaged experts to assess the reserves and resources used to determine the life-of-mine in the impairment calculation for reasonability.</p> <p>We considered the impairment assessment of the South Deep CGU to be a matter of most significance to the current year audit due the following reasons:</p> <ul style="list-style-type: none"> <li>• Significant judgement applied by management in relation to the significant assumptions used in determining the recoverable amount of the South Deep CGU; and</li> <li>• Given the magnitude of the amounts involved, a possible misstatement of a significant assumption could result in a material impairment or reversal of impairment.</li> </ul>	<p>Our procedures performed to assess the appropriateness of no impairment, or reversal of impairment related to the South Deep CGU included the following:</p> <ul style="list-style-type: none"> <li>• We assessed the Group’s accounting policy for impairment of long-lived assets with reference to the requirements of International Accounting Standard (IAS) 36, Impairment of Assets, and the prior year financial statements. We noted no matters requiring further consideration;</li> <li>• We evaluated the design, implementation and operating effectiveness of the relevant internal controls over management’s process to develop their estimate of the recoverable amount of the South Deep CGU, including controls over the preparation, review and approval of the impairment calculation and significant assumptions used in the calculation;</li> <li>• We compared the current year’s actual results with the operational plan forecast used in the 2019 impairment assessment to consider the reasonability of management’s forecast of cash flows. We evaluated differences noted against relevant documentation and explanations obtained from management;</li> <li>• Through inspection of CVs, membership certificates from professional bodies and competent persons reports, we assessed the objectivity, competence and experience of management’s experts. We noted no aspects in this regard requiring further consideration; and</li> <li>• We utilised our corporate finance and financial modelling expertise to perform the following: <ul style="list-style-type: none"> <li>– We assessed the valuation model used by management in their impairment assessment, by comparing to industry norms and acceptable valuation methodology. We found that it was consistent with industry norms and acceptable valuation methodology;</li> <li>– We benchmarked management’s significant assumptions related to economic factors such as forecasted Rand gold prices, inflation rates, and long-term foreign exchange rates used in the impairment calculations against independent third-party data. Based on our work performed, we accepted management’s assumptions;</li> <li>– We independently calculated a range of discount rates, including using relevant independent third-party sources and data such as the cost of debt, risk-free rates in the market, market risk premiums, debt/equity ratios, the beta of comparable companies, as well as the impact of economic and industry factors. We found management’s discount rate to be within an acceptable range; and</li> <li>– In respect of the resource valuation, we performed market research on gold mining transactions in South Africa and the rest of Africa over the past 10 years to determine a resource value per ounce to be applied in our reasonability assessment of the value of the remaining resource ounces. Based on the work performed we found that management’s resource valuation fell within our range of values.</li> </ul> </li> <li>• Using the assumptions tested above as well as the production ramp-up risk that is still present at the South Deep CGU, we calculated a range of recoverable amounts for the South Deep CGU and compared the results of our calculation to the recoverable amount determined by management. We found that management’s recoverable amount fell within our calculated range.</li> </ul>

### Other information

The directors are responsible for the other information. The other information comprises the information included in the document titled “Gold Fields Annual Financial Report including Governance Report 2020”, which includes the Directors’ Report, the Audit Committee Report and the Company Secretary’s Certificate as required by the Companies Act of South Africa, and the documents titled “Gold Fields Integrated Annual Report 2020”, “Gold Fields Minerals Resources and Mineral Reserves Supplement to the Integrated Annual Report 2020”, “Gold Fields Notice of Annual General Meeting for the year ended 31 December 2020” and “Gold Fields Limited Annual Separate Financial Statements for the year ended 31 December 2020”, which we obtained prior to the date of this auditor’s report, and the documents titled “Gold Fields GRI Content Index 2020”, “Gold Fields Report to Stakeholders 2020” and “Gold Fields Climate Change Report 2020”, which is expected to be made available to us after that date. The other information does not include the consolidated or the separate financial statements and our auditor’s reports thereon.

Our opinion on the consolidated financial statements does not cover the other information and we do not and will not express an audit opinion or any form of assurance conclusion thereon.

## INDEPENDENT AUDITOR'S REPORT continued

In connection with our audit of the consolidated financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed on the other information that we obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

### Responsibilities of the directors for the consolidated financial statements

The directors are responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, the directors are responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

### Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the directors.
- Conclude on the appropriateness of the directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with the directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with the directors, we determine those matters that were of most significance in the audit of the consolidated financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

### Report on other legal and regulatory requirements

In terms of the IRBA Rule published in Government Gazette Number 39475 dated 4 December 2015, we report that PricewaterhouseCoopers Inc. has been the auditor of Gold Fields Limited for two years.

*PricewaterhouseCoopers Inc*

Director: PC Hough

Registered Auditor  
Johannesburg, South Africa

31 March 2021

## ACCOUNTING POLICIES

The principal accounting policies applied in the preparation of these financial statements (referred to as the “consolidated financial statements” or “financial statements”) are set out below. These policies have been consistently applied to all the years presented, except for the adoption of new and revised standards and interpretations.

Gold Fields Limited (the “Company” or “Gold Fields”) is a company domiciled in South Africa. The registration number of the Company is 1968/004880/06. The address of the Company is 150 Helen Road, Sandton, Johannesburg. The consolidated financial statements of the Company as at 31 December 2020 and 2019 and for each of the years in the three-year period ended 31 December 2020 comprise the Company and its subsidiaries (together referred to as the “Group” and individually as “Group entities”) as well as the Group’s share of the assets, liabilities, income and expenses of its joint operations and the Group’s interest in associates and its joint ventures. The Group is primarily involved in gold mining.

### 1. BASIS OF PREPARATION

The financial statements of the Group have been prepared in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”), the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee, Financial Reporting Pronouncements as issued by the Financial Reporting Standards Council, the JSE Listings Requirements and the South African Companies Act.

As required by the United States Securities and Exchange Commission, the financial statements include the consolidated statements of financial position as at 31 December 2020 and 2019 and the consolidated income statements and statements of comprehensive income, changes in equity and cash flows for the years ended 31 December 2020, 2019 and 2018 and the related notes.

The consolidated financial statements were authorised for issue by the Board of Directors on 31 March 2021.

#### Standards, interpretations and amendments to published standards effective for the year ended 31 December 2020 or early adopted by the Group

During the financial year, the following new and revised accounting standards, amendments to standards and new interpretations were adopted by the Group:

Standard(s) Amendment(s) Interpretation(s)	Nature of the change	Salient features of the changes	Impact on financial position or performance
IFRS 3 <i>Business Combinations</i>	Amendments	<ul style="list-style-type: none"> <li>• These amendments make it easier for companies to decide whether activities and assets they acquire are a business or merely a group of assets. The amendments:                             <ul style="list-style-type: none"> <li>– Confirm that a business must include inputs and a process, and clarified that: (i) the process must be substantive and (ii) the inputs and process must together significantly contribute to creating outputs;</li> <li>– Narrow the definitions of a business by focusing the definition of outputs on goods and services provided to customers and other income from ordinary activities, rather than on providing dividends or other economic benefits directly to investors or lowering costs; and</li> <li>– Add a test that makes it easier to conclude that a company has acquired a group of assets, rather than a business, if the value of the assets acquired is substantially all concentrated in a single asset or group of similar assets.</li> </ul> </li> <li>• The Group adopted the amendments on 1 January 2020.</li> </ul>	No impact

## ACCOUNTING POLICIES continued

Standard(s) Amendment(s) Interpretation(s)	Nature of the change	Salient features of the changes	Impact on financial position or performance
<p><b>IAS 1</b> <i>Presentation of Financial Statements</i> and <b>IAS 8</b> <i>Accounting Policies, Changes in Accounting Estimates and Errors</i></p>	Amendments	<ul style="list-style-type: none"> <li>• The IASB refined its definition of material to make it easier to understand. It is now aligned across IFRS and the Conceptual Framework;</li> <li>• The revised definition of material is:               <ul style="list-style-type: none"> <li>– Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity;</li> </ul> </li> <li>• The Board has also removed the definition of material omissions or misstatements from IAS 8 <i>Accounting Policies, Changes in Accounting Estimates and Errors</i>; and</li> <li>• The Group adopted the amendments on 1 January 2020.</li> </ul>	No impact
<p><b>IFRS 7</b> <i>Financial Instruments: Disclosures</i>, <b>IFRS 9</b> <i>Financial Instruments</i> and <b>IAS 39</b> <i>Financial Instruments: Recognition and Measurement</i></p>	Amendments	<ul style="list-style-type: none"> <li>• The amendments to IFRS 7, IFRS 9 and IAS 39 provide certain reliefs in relation to interest rate benchmark reforms. The reliefs relate to hedge accounting and have the effect that the reforms should not generally cause hedge accounting to terminate. However, any hedge ineffectiveness should continue to be recorded in profit or loss; and</li> <li>• The Group adopted the amendments on 1 January 2020.</li> </ul>	No impact
Revised Conceptual Framework for Financial Reporting	Revised Framework	<ul style="list-style-type: none"> <li>• The IASB has issued a revised Conceptual Framework which will be used in standard-setting decisions with immediate effect. Key changes include:               <ul style="list-style-type: none"> <li>– Increasing the prominence of stewardship in the objective of financial reporting;</li> <li>– Reinstating prudence as a component of neutrality;</li> <li>– Defining a reporting entity, which may be a legal entity, or a portion of an entity;</li> <li>– Revising the definitions of an asset and a liability;</li> <li>– Removing the probability threshold for recognition and adding guidance on derecognition;</li> <li>– Adding guidance on different measurement basis; and</li> <li>– Stating that profit or loss is the primary performance indicator and that, in principle, income and expense in other comprehensive income should be recycled where this enhances the relevance or faithful representation of the financial statements.</li> </ul> </li> <li>• No changes will be made to any of the current accounting standards. However, entities that rely on the Framework in determining their accounting policies for transactions, events or conditions that are not otherwise dealt with under the accounting standards will need to apply the revised Framework; and</li> <li>• The Group adopted the revised Framework on 1 January 2020.</li> </ul>	No impact

### Standards, interpretations and amendments to published standards that are not yet effective

Certain new standards, amendments and interpretations to existing standards have been published that apply to the Group's accounting periods beginning on 1 January 2021 or later periods but have not been early adopted by the Group.

These standards, amendments and interpretations that are relevant to the Group are:

Standard(s) Amendment(s) Interpretation(s)	Nature of the change	Salient features of the changes	Effective date*
<b>IFRS 17</b> <i>Insurance Contracts</i>	New Standard	<ul style="list-style-type: none"> <li>• IFRS 17 supersedes IFRS 4 <i>Insurance Contracts</i> and aims to increase comparability and transparency about profitability. The new standard introduces a new comprehensive model ("general model") for the recognition and measurement of liabilities arising from insurance contracts;</li> <li>• In addition, it includes a simplified approach and modifications to the general measurement model that can be applied in certain circumstances and to specific contracts, such as: <ul style="list-style-type: none"> <li>– Reinsurance contracts held;</li> <li>– Direct participating contracts; and</li> <li>– Investment contracts with discretionary participation features.</li> </ul> </li> <li>• Under the new standard, investment components are excluded from insurance revenue and service expenses. Entities can also choose to present the effect of changes in discount rates and other financial risks in profit or loss or OCI;</li> <li>• The new standard includes various new disclosures and requires additional granularity in disclosures to assist users to assess the effects of insurance contracts on the entity's financial statements; and</li> <li>• The Group is in the process of evaluating whether IFRS 17 will have an impact on the Group and will provide more detailed disclosure on the impact in future financial statements.</li> </ul>	1 January 2023
<b>IFRS 16</b> <i>Leases</i>	Amendments	<ul style="list-style-type: none"> <li>• As a result of the Covid-19 pandemic, rent concessions have been granted to lessees. Such concessions might take a variety of forms, including payment holidays and deferral of lease payments;</li> <li>• The amendment to IFRS 16 provides lessees with an option to treat qualifying rent concessions in the same way as they would if they were not lease modifications. In many cases, this will result in accounting for the concessions as variable lease payments in the period in which they are granted;</li> <li>• Entities applying the practical expedients must disclose this fact, whether the expedient has been applied to all qualifying rent concessions or, if not, information about the nature of the contracts to which it has been applied, as well as the amount recognised in profit or loss arising from the rent concessions; and</li> <li>• The amendment will not have a material impact on the Group.</li> </ul>	1 June 2020
<b>IAS 8</b> <i>Accounting Policies, Changes in Accounting Estimates and Errors</i>	Amendment	<ul style="list-style-type: none"> <li>• This amendment to IAS 8 clarifies how companies should distinguish between changes in accounting policies and changes in accounting estimates; and</li> <li>• The amendment is not expected to have a material impact on the Group.</li> </ul>	1 January 2023

## ACCOUNTING POLICIES continued

Standard(s) Amendment(s) Interpretation(s)	Nature of the change	Salient features of the changes	Effective date*
<b>IAS 1</b> <i>Presentation of Financial Statements and IFRS Practice Statement 2</i>	Amendments	<ul style="list-style-type: none"> <li>• This amendment to IAS 1 requires companies to disclose their material accounting policy information rather than their significant accounting policies;</li> <li>• This amendment also provides a definition of material accounting policy information;</li> <li>• Further, the amendment clarifies that immaterial accounting policy information need not be disclosed;</li> <li>• To support this amendment, the Board also amended IFRS Practice Statement 2 Making Materiality Judgements, to provide guidance on how to apply the concept of materiality to accounting policy disclosures; and</li> <li>• The amendment is not expected to have a material impact on the Group</li> </ul>	1 January 2023
<b>IAS 1</b> <i>Presentation of Financial Statements</i>	Amendments	<ul style="list-style-type: none"> <li>• The amendments to IAS 1 clarify that liabilities are classified as either current or noncurrent, depending on the rights that exist at the end of the reporting period. Classification is unaffected by the expectations of the entity or events after the reporting date;</li> <li>• The amendments also clarify what IAS 1 means when it refers to the 'settlement' of a liability; and</li> <li>• The amendments are not expected to have a material impact on the Group.</li> </ul>	1 January 2022 (possibly deferred to 1 January 2023)
<b>IAS 16</b> <i>Property, plant and equipment</i>	Amendment	<ul style="list-style-type: none"> <li>• The amendment to IAS 16 prohibits an entity from deducting from the cost of an item of property, plant and equipment any proceeds received from selling items produced while the entity is preparing the asset for its intended use;</li> <li>• It also clarifies that an entity is 'testing whether the asset is functioning properly' when it assesses the technical and physical performance of the asset. The financial performance of the asset is not relevant to this assessment; and</li> <li>• The Group is in the process of evaluating whether the amendment to IAS 16 will have an impact on the Group and will provide more detailed disclosure on the impact in future financial statements.</li> </ul>	1 January 2022
<b>IFRS 3</b> <i>Business Combinations</i>	Amendment	<ul style="list-style-type: none"> <li>• The amendments to IFRS 3 <i>Business Combinations</i> updates the references to the Conceptual Framework for Financial Reporting and adds an exception for the recognition of liabilities and contingent liabilities within the scope of IAS 37 <i>Provisions, Contingent Liabilities and Contingent Assets and Interpretation 21 Levies</i>;</li> <li>• The amendments also confirm that contingent assets should not be recognised at the acquisition date; and</li> <li>• The amendments will not have a material impact on the Group.</li> </ul>	1 January 2022

Standard(s) Amendment(s) Interpretation(s)	Nature of the change	Salient features of the changes	Effective date*
IAS 37 <i>Provisions, Contingent Liabilities and Contingent Assets</i>	Amendment	<ul style="list-style-type: none"> <li>The amendment to IAS 37 clarifies that the direct costs of fulfilling a contract include both the incremental costs of fulfilling the contract and an allocation of other costs directly related to fulfilling contracts. Before recognising a separate provision for an onerous contract, the entity recognises any impairment loss that has occurred on assets used in fulfilling the contract; and</li> <li>The amendment will not have a material impact on the Group</li> </ul>	1 January 2022
Annual Improvements	Amendment	<p>The following improvements were finalised:</p> <ul style="list-style-type: none"> <li>IFRS 9 <i>Financial Instruments</i> – clarifies which fees should be included in the 10% test for derecognition of financial liabilities;</li> <li>IFRS 16 <i>Leases</i> – amendment of illustrative example 13 to remove the illustration of payments from the lessor relating to leasehold improvements, to remove any confusion about the treatment of lease incentives;</li> <li>IFRS 1 <i>First-time Adoption of International Financial Reporting Standards</i> – allows entities that have measured their assets and liabilities at carrying amounts recorded in their parent’s books to also measure any cumulative translation differences using the amounts reported by the parent. This amendment will also apply to associates and joint ventures that have taken the same IFRS 1 exemption; and</li> <li>The annual improvements will not have a material Impact on the Group.</li> </ul>	1 January 2022

\* Effective date refers to annual period beginning on or after said date.

### Significant accounting judgements and estimates

Use of estimates: The preparation of the financial statements in accordance with IFRS requires the Group’s management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. The determination of estimates requires the exercise of judgement based on various assumptions and other factors such as historical experience, current and expected economic conditions, and in some cases actuarial techniques. Actual results could differ from those estimates.

The more significant areas requiring the use of management estimates and assumptions relate to the following:

- Mineral reserves and resources estimates (this forms the basis of future cash flow estimates used for impairment assessments and units-of-production depreciation and amortisation calculations);
- Carrying value of property, plant and equipment;
- Production start date;
- Estimates of recoverable gold and other materials in heap leach and stockpiles, gold in process and product inventories including write-downs of inventory to net realisable value;
- Carrying value of equity-accounted investees;
- Provision for environmental rehabilitation costs;
- Provision for silicosis settlement costs;
- Income taxes;
- Share-based payments;
- Long-term incentive plan;
- The fair value and accounting treatment of financial instruments; and
- Contingencies.

## ACCOUNTING POLICIES continued

Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Due to the negligible impact that Covid-19 had on the group, no specific Covid-19 adjustments were made to any significant estimates and judgements. The impact of Covid-19 on macro-economic assumptions, such as gold price and exchange rate forecasts, is included in management's forecasts.

The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the financial year are discussed below.

### Mineral reserves and resources estimates

Mineral reserves are estimates of the amount of product, inclusive of diluting materials and allowances for losses, which can be economically and legally extracted from the Group's properties, as determined by life-of-mine schedules or pre-feasibility studies.

Mineral resources are estimates, based on specific geological evidence and knowledge, including sampling, of the amount of product in situ, for which there is a reasonable prospect for eventual legal and economic extraction.

In order to calculate the reserves and resources, estimates and assumptions are required about a range of geological, technical and economic factors, including but not limited to quantities, grades, production techniques, recovery rates, production costs, capital expenditure, transport costs, commodity demand, commodity prices and exchange rates.

Estimating the quantity and grade of the mineral reserves and resources is based on exploration and sampling information gathered through appropriate techniques (primarily diamond drilling, reverse circulation drilling, air-core and sonic drilling), surface three-dimensional reflection seismics, ore body faces modelling, structural modelling, geological mapping, detailed ore zone wireframes and geostatistical estimation. This process may require complex and difficult geological judgements and calculations to interpret the data.

The Group is required to determine and report on the mineral reserves and resources in accordance with the South African Mineral Resource Committee ("SAMREC") code on an annual basis. The Mineral Reserves and Resources were approved by the Competent Person.

Estimates of mineral reserves and resources may change from year to year due to the change in economic, regulatory, infrastructural or social assumptions used to estimate ore reserves and resources, and due to additional geological data becoming available.

Changes in reported proved and probable reserves may affect the Group's financial results and position in a number of ways, including the following:

- The recoverable amount used in the impairment calculations may be affected due to changes in estimated cash flows or timing thereof (refer to note 7);
- Amortisation and depreciation charges to profit or loss may change as these are calculated on the units-of-production method, or where the useful economic lives of assets change (refer to note 2);
- Provision for environmental rehabilitation costs may change where changes in ore reserves affect expectations about the timing or cost of these activities (refer to note 25.1); and
- The carrying value of deferred tax assets may change due to changes in estimates of the likely recovery of the tax benefits (refer to note 23).

Changes in reported measured and indicated resources may affect the Group's financial results and position in a number of ways, including the following:

- The recoverable amount used in the impairment calculations may be affected due to changes in estimated market value of resources exclusive of reserves (refer to note 7); and
- Amortisation and depreciation charges for the mineral rights asset at the Australian operations may change as a result of the change in the portion of mineral rights asset being transferred from the non-depreciable component to the depreciable component (refer to note 2).

### Carrying value of property, plant and equipment

All mining assets are amortised using the units-of-production method where the mine operating plan calls for production from proved and probable mineral reserves.

Mobile and other equipment are depreciated over the shorter of the estimated useful life of the asset or the estimate of mine life based on proved and probable mineral reserves.

The calculation of the units-of-production rate of amortisation could be impacted to the extent that actual production in the future is different from current forecast production based on proved and probable mineral reserves. This would generally result from the extent that there are significant changes in any of the factors or assumptions used in estimating mineral reserves. These factors could include:

- Changes in proved and probable mineral reserves;
- Differences between actual commodity prices and commodity price assumptions;
- Unforeseen operational issues at mine sites;
- Changes in capital, operating, mining, processing and reclamation costs, discount rates and foreign currency exchange rates; and
- Changes in mineral reserves could similarly impact the useful lives of assets depreciated on a straight-line basis, where those lives are limited to the life of the mine.

The Group reviews and tests the carrying value of long-lived assets annually or when events or changes in circumstances suggest that the carrying amount may not be recoverable by comparing the recoverable amounts to these carrying values. Assets are grouped at the lowest level for which identifiable cash flows are largely independent of cash flows of other assets and liabilities. If there are indications that impairment or reversal of impairment may have occurred, estimates are prepared of recoverable amounts of each group of assets. The recoverable amounts of cash-generating units ("CGU") and individual assets have been determined based on the higher of value in use and fair value less cost of disposal ("FVLCOD") calculations. Expected future cash flows used to determine the value in use or FVLCOD of property, plant and equipment and goodwill are inherently uncertain and could materially change over time. They are significantly affected by a number of factors including reserves and production estimates, together with economic factors such as the gold and copper prices, discount rates, foreign currency exchange rates, resource valuations (determined based on comparable market transactions), estimates of costs to produce reserves and future capital expenditure.

The Group generally used FVLCOD to determine the recoverable amount of each CGU.

## ACCOUNTING POLICIES continued

Significant assumptions used in the Group's impairment assessments (FVLCO calculations) include:

	2020	2019	2018
US\$ Gold price per ounce – year 1	<b>US\$1,600</b>	US\$1,500	US\$1,200
US\$ Gold price per ounce – year 2	<b>US\$1,700</b>	US\$1,400	US\$1,300
US\$ Gold price per ounce – year 3	<b>US\$1,600</b>	US\$1,400	US\$1,300

A\$/US\$ – year 4 onwards	<b>0.75</b>	0.73	0.76

<sup>1</sup> Due to the availability of unredeemed capital for tax purposes over several years into the life of the South Deep mine, nominal cash flows are used for South Africa. In order to determine nominal cash flows in South Africa, costs are inflated by the current South African inflation rate. Cash flows for all other operations are in real terms and as a result are not inflated.

The FVLCOD calculations are sensitive to the gold price assumptions and an increase or decrease in the gold price could materially change the FVLCOD.

Should there be a significant decrease in the gold or copper price, the Group would take actions to assess the implications on the life-of-mine plans, including the determination of reserves and resources and the appropriate cost structure for the CGUs.

Refer to notes 2, 7 and 14 for further details.

The carrying amount of property, plant and equipment at 31 December 2020 was US\$4,771.2 million (2019: US\$4,657.1 million).

An impairment of US\$481.5 million was recognised in respect of the South Deep CGU for the year ended 31 December 2018. US\$71.7 million of the total impairment was firstly allocated against goodwill and the remainder of US\$409.8 million against other assets.

South Deep is still in the “ramp-up” phase to steady state production. The first five years of the “ramp-up” phase is the “at risk” period at South Deep, as there is not a long-term track record of achieving these ramp up levels consistently. In addition, there is a risk that further Covid-19 waves could severely impact the production build up profile. These risks were modelled in various life of mine scenarios for the South Deep mine. Based on these scenarios, Gold Fields concluded that no impairment or reversal of impairment should be processed at South Deep in 2020 or 2019.

The carrying value of the South Deep CGU amounts to US\$1.4 billion (R21.1 billion) (2019: US\$1.5 billion (R21.1 billion) and 2018: US\$1.4 billion (R21.2 billion)) at 31 December 2020.

#### **Production start date**

The Group assesses the stage of each mine construction project to determine when a mine moves into the production stage. The criteria used to assess the start date are determined based on the unique nature of each mine construction project. The Group considers various relevant criteria to assess when the mine is substantially complete, ready for its intended use and moves into the production stage. Some of the criteria would include, but are not limited to the following:

- The level of capital expenditure compared to the construction cost estimates;
- Ability to produce metal in saleable form (within specifications); and
- Ability to sustain commercial levels of production of metal.

When a mine construction project moves into the production stage, the capitalisation of certain mine construction costs ceases and costs are either regarded as inventory or expensed, except for capitalisable costs related to mining asset additions or improvements, underground mine development, deferred stripping activities or ore reserve development.

Refer to note 16.2 for details of the Gruyere Gold project.

#### **Stockpiles, gold in process and product inventories**

Costs that are incurred in or benefit the productive process are accumulated as stockpiles, gold in process, ore on leach pads and product inventories. Net realisable value tests are performed on a monthly basis for short-term stockpiles, gold in process and product inventories and at least annually for long-term stockpiles and represent the estimated future sales price of the product based on prevailing spot metals prices at the reporting date, less estimated costs to complete production and bring the product to sale. If any inventories are expected to be realised in the long term, estimated future sales prices are used for valuation purposes.

Stockpiles are measured by estimating the number of tonnes added and removed from the stockpile, the number of contained gold ounces based on assay data, and the estimated recovery percentage based on the expected processing method. Stockpile tonnages are verified by periodic surveys.

Although the quantities of recoverable metal are reconciled by comparing the grades of ore to the quantities of metals actually recovered (metallurgical balancing), the nature of the process inherently limits the ability to precisely monitor the recoverability levels. As a result, the metallurgical balancing process is constantly monitored and engineering estimates are refined based on actual results over time.

Variations between actual and estimated quantities resulting from changes in assumptions and estimates that do not result in write downs to net realisable value are accounted for on a prospective basis.

Refer to note 19 for further details.

The carrying amount of total gold in process and stockpiles (non-current and current) at 31 December 2020 was US\$450.2 million (2019: US\$375.1 million).

## ACCOUNTING POLICIES continued

### Carrying value of equity-accounted investees

The Group reviews and tests the carrying value of equity-accounted investees annually or when events or changes in circumstances suggest that the carrying amount may not be recoverable by comparing the recoverable amounts to these carrying values. If there are indications that impairment may have occurred, estimates are prepared of the recoverable amount of the equity-accounted investee. The recoverable amounts are determined based on the higher of value in use or FVLCOB. The FVLCOB is determined using the following methods:

- A combination of the income and market approach. The income approach is based on the expected future cash flows of the operations and the market approach is used to determine the value beyond proved and probable reserves for the operation, using comparable market transactions; and
- Using quoted market prices of other investors in the equity-accounted investee with appropriate adjustments in order to derive the fair value.

Expected future cash flows used to determine the FVLCOB of equity-accounted investees are inherently uncertain and could materially change over time. They are significantly impacted by a number of factors including reserves and production estimates, together with economic factors such as gold and copper prices, discount rates, foreign currency exchange rates, resource valuations (determined based on comparable market transactions), estimates of costs to produce reserves and future capital expenditure. The key assumptions used in the income and market approach are as follows:

	2020	2019
US\$ Gold price per ounce – year 1 to 3	<b>US\$1,600 – US\$1,800</b>	US\$1,400 – US\$1,500
US\$ Gold price per ounce – year 4 onwards	<b>US\$1,500</b>	US\$1,350
Resource value per ounce (with infrastructure)	<b>US\$76</b>	US\$70
Discount rates – real	<b>8.4%</b>	8.5%
Life-of-mine	<b>7 years</b>	10 years

The FVLCOB calculations are sensitive to the gold price assumption and the quoted market prices, a decrease or increase in these two assumptions could materially change the FVLCOB.

Refer to note 16.1 for further details.

The carrying amount of equity-accounted investees at 31 December 2020 was US\$233.3 million (2019: US\$172.0 million).

### Provision for environmental rehabilitation costs

The Group's mining and exploration activities are subject to various laws and regulations governing the protection of the environment. The Group recognises management's best estimate for the provision of environmental rehabilitation costs in the period in which they are incurred. Actual costs incurred in future periods could differ materially from the estimates. Additionally, future changes to environmental laws and regulations, life-of-mine estimates and discount rates could affect the carrying amount of this provision.

Refer to note 25.1 for details of key assumptions used to estimate the provision.

The carrying amounts of the provision for environmental rehabilitation costs at 31 December 2020 was US\$381.5 million (2019: US\$370.3 million) of which US\$19.6 million (2019: US\$nil) was classified as current and US\$361.9 million (2019: US\$370.3 million) as non-current.

### Provision for silicosis settlement costs

The Group has an obligation in respect of a settlement of the silicosis class action claims and related costs. The Group recognises management's best estimate for the provision of silicosis settlement costs.

The ultimate outcome of this matter however remains uncertain, with the number of eligible workers successfully submitting claims and receiving compensation being uncertain. The provision is consequently subject to adjustment in the future.

Refer to notes 25.2 and 35 for further details.

The carrying amounts of the provision for silicosis settlement costs at 31 December 2020 was US\$18.3 million (2019: US\$21.2 million) of which US\$4.0 million (2019: US\$4.6 million) was classified as current and US\$14.3 million (2019: US\$16.6 million) as non-current.

### Income taxes

The Group is subject to income taxes in numerous jurisdictions. Significant judgement is required in determining the liability for income taxes due to the complexity of legislation. There are many transactions and calculations for which the ultimate tax determination is uncertain during the ordinary course of business. The Group recognises liabilities for anticipated tax audit issues based on estimates of whether additional taxes will be due. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact income tax and deferred tax in the period in which such determination is made.

The Group recognises the future tax benefits related to deferred income tax assets to the extent that it is probable that the deductible temporary differences will reverse in the foreseeable future. Assessing the recoverability of deferred income tax assets requires the Group to make significant estimates related to expectations of future taxable income. Estimates of future taxable income are based on forecast cash flows from operations and the application of existing tax laws in each jurisdiction. To the extent that future cash flows and taxable income differ significantly from estimates, the ability of the Group to realise the net deferred tax assets recorded at the reporting date could be impacted.

Additionally, future changes in tax laws in the jurisdictions in which the Group operates could limit the ability of the Group to obtain tax deductions in future periods.

Refer to notes 23 and 31 for further details.

Carrying values at 31 December 2020:

- Deferred taxation liability: US\$499.9 million (2019: US\$433.6 million);
- Deferred taxation asset: US\$240.0 million (2019: US\$265.5 million); and
- Taxation payable: US\$121.3 million (2019: US\$24.8 million).

Refer to note 10 for details of unrecognised deferred tax assets.

### Share-based payments

The Group issues equity-settled share-based payments to Executive Directors, certain officers and employees. The fair value of these instruments is measured at grant date, using the Black-Scholes and Monte Carlo simulation valuation models, which require assumptions regarding the estimated term of the option, share price volatility and expected dividend yield. While Gold Fields' management believes that these assumptions are appropriate, the use of different assumptions could have a material impact on the fair value of the option granted and the related recognition of the share-based payments expense in the consolidated income statement. Gold Fields' options have characteristics significantly different from those of traded options and therefore fair values may also differ.

Refer to note 5 for further details.

The income statement charge for the year ended 31 December 2020 was US\$14.5 million (2019: US\$20.5 million and 2018: US\$37.5 million).

### Long-term incentive plan

The Group issues awards relating to its long-term incentive plan to certain employees. These awards are measured on the date the award is made and re-measured at each reporting period. A portion of the award is measured using the Monte Carlo simulation valuation model, which requires assumptions regarding the share price volatility and expected dividend yield. The assumptions, supporting the estimated amount expected to be paid, are reviewed at each reporting date. While Gold Fields' management believes that these assumptions are appropriate, the use of different assumptions could have a material impact on the measurement of the awards and the related recognition of the compensation expense in profit or loss.

Refer to note 26 for further details.

The charge for the year ended 31 December 2020 was US\$51.3 million (2019: US\$9.1 million and 2018: US\$1.1 million) and the balance at 31 December 2020 of the long-term cash incentive provision was US\$67.2 million (2019: US\$11.5 million) of which US\$33.8 million (2019: US\$nil) was classified as current and US\$33.4 million (2019: US\$11.5 million) as non-current.

## ACCOUNTING POLICIES continued

### Financial instruments

#### Derivative financial instruments

The estimated fair value of financial instruments is determined at discrete points in time, based on the relevant market information. The fair value is calculated with reference to market rates using industry valuation techniques and appropriate models. The carrying values of derivative financial instruments at 31 December 2020 was US\$113.3 million (2019: US\$1.1 million) of which US\$81.9 million (2019: US\$1.1 million) was classified as current and US\$31.4 million (2019: US\$nil) as non-current. The carrying values of derivative financial instruments at 31 December 2020 was US\$29.1 million (2019: US\$127.6 million) of which US\$21.8 million (2019: US\$127.6 million) was classified as current and US\$7.3 million (2019: US\$nil) as non-current. Refer to notes 20, 27 and 38 for further details.

#### Asanko redeemable preference shares

Significant judgement is required in estimating life-of-mine cash flows used in determining the expected timing of the cash flows for the repayment of the redeemable preference shares.

In order to estimate the life-of-mine model used in the valuation, estimates and assumptions are required about a range of geological, technical and economic factors, including but not limited to quantities, grades, production techniques, recovery rates, production costs, capital expenditure, transport costs, commodity demand, commodity prices and exchange rates. Refer to note 17 for key assumptions used.

The life-of-mine cash flows are sensitive to the gold price assumptions and an increase or decrease in the gold price could materially change the valuations.

The fair value of the Asanko redeemable preference shares at 31 December 2020 was US\$92.6 million (2019: US\$95.5 million).

### Contingencies

By their nature, contingencies will only be resolved when one or more future events occur or fail to occur. The assessment of such contingencies inherently involves the exercise of significant judgement and estimates of the outcome of future events. Such contingencies include, but are not limited to, environmental obligations, litigation, regulatory proceedings, tax matters and losses resulting from other events and developments.

When a loss is considered probable and reasonably estimable, a liability is recorded based on the best estimate of the ultimate loss. The likelihood of a loss with respect to a contingency can be difficult to predict and determining a meaningful estimate of the loss or a range of losses may not always be practicable based on the information available at the time and the potential effect of future events and decisions by third parties that will determine the ultimate resolution of the contingency. It is not uncommon for such matters to be resolved over many years, during which time relevant developments and new information is continuously evaluated to determine both the likelihood of any potential loss and whether it is possible to reasonably estimate a range of possible losses. When a loss is probable but a reasonable estimate cannot be made, disclosure is provided.

Refer to note 35 for details on contingent liabilities.

## 2. CONSOLIDATION

### 2.1 Business combinations

The acquisition method of accounting is used to account for business combinations by the Group. The consideration transferred for the acquisition of a business is the fair value of the assets transferred, the liabilities incurred and the equity interests issued by the Group. The consideration transferred includes the fair value of any asset or liability resulting from a contingent consideration arrangement. Acquisition-related costs are expensed as incurred, other than those associated with the issue of debt or equity securities. Identifiable assets acquired and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date. On an acquisition-by-acquisition basis, the Group recognises any non-controlling interest in the acquiree either at fair value or at the non-controlling interest's proportionate share of the acquiree's net assets. Subsequently, the carrying amount of non-controlling interest is the amount of the interest at initial recognition plus the non-controlling interest's share of the subsequent changes in equity.

The excess of the consideration transferred, the amount of any non-controlling interest in the acquiree and the acquisition date fair value of any previous equity interest in the acquiree over the fair value of the identifiable net assets acquired is recorded as goodwill. If this is less than the fair value of the net assets of the subsidiary acquired, the difference is recognised directly in profit or loss.

If a transaction does not meet the definition of a business under IFRS, the transaction is recorded as an asset acquisition. Accordingly, the identifiable assets acquired and liabilities assumed are measured at the fair value of the consideration paid, based on their relative fair values at the acquisition date. Acquisition-related costs are included in the consideration paid and capitalised. Any contingent consideration payable that is dependent on the purchaser's future activity is not included in the consideration paid until the activity requiring the payment is performed. Any resulting future amounts payable are recognised in profit or loss when incurred. No goodwill and no deferred tax asset or liability arising from the assets acquired and liabilities assumed are recognised upon the acquisition of assets.

## 2.2 Subsidiaries

Subsidiaries are all entities controlled by the Group. The Group controls an entity when it is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the relevant activities of the entity. Subsidiaries are fully consolidated from the date on which control is transferred to the Group until the date on which control ceases.

Inter-company transactions, balances and unrealised gains and losses on transactions between Group companies are eliminated. Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the Group.

## 2.3 Transactions with non-controlling interests

The Group treats transactions with non-controlling interests that do not result in loss of control as transactions with equity owners of the Group. For purchases from non-controlling interests, the difference between any consideration paid and the relevant share acquired of the carrying value of net assets of the subsidiary is recorded in equity. Gains or losses on disposals to non-controlling interests are also recorded in equity.

## 2.4 Equity-accounted investees

The Group's interests in equity-accounted investees comprise interests in associates and joint ventures.

Associates are those entities in which the Group has significant influence, but not control or joint control, over the financial and operating policies. Joint ventures are arrangements in which the Group has joint control, whereby the Group has rights to the net assets of the arrangement, rather than rights to its assets and obligations for its liabilities.

Interests in associates and joint ventures are accounted for using the equity method. They are recognised initially at cost, which includes transaction costs. Subsequent to initial recognition, the consolidated financial statements include the Group's share of the profit or loss and the other comprehensive income of equity-accounted investees, until the date on which significant influence or joint control ceases.

Results of associates and joint ventures are equity-accounted using the results of their most recent financial information. Any losses from associates or joint ventures are brought to account in the consolidated financial statements until the interest in such associates or joint ventures is written down to zero. Thereafter, losses are accounted for only insofar as the Group is committed to providing financial support to such associates or joint ventures.

The carrying value of an investment in associate and joint ventures represents the cost of the investment, including goodwill, a share of the post-acquisition retained earnings and losses, any other movements in reserves and any accumulated impairment losses. The Group applies IFRS 9 to long-term interests in an associate or joint venture that form part of the net investment in the associate or joint venture but to which the equity method is not applied. The carrying value is assessed annually for existence of indicators of impairment and if such exist, the carrying amount is compared to the recoverable amount, being the higher of value in use or fair value less cost of disposal. If an impairment in value has occurred, it is recognised in profit or loss in the period in which the impairment arose.

## 2.5 Joint operations

A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the use of assets and obligations for the liabilities of the arrangement. The Group accounts for activities under joint operations by recognising in relation to the joint operation, the assets it controls and the liabilities it incurs, the expenses it incurs and the revenue from the sale or use of its share of the joint operations' output.

## ACCOUNTING POLICIES continued

### 3. FOREIGN CURRENCIES

#### 3.1 Functional and presentation currency

Items included in the financial statements of each of the Group entities are measured using the currency of the primary economic environment in which the entity operates ("the functional currency"). The consolidated financial statements are presented in US Dollar, which is the Group's presentation currency. The functional currency of the parent company is South African Rand.

#### 3.2 Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions, and from the translation of monetary assets and liabilities denominated in foreign currencies, are recognised in profit or loss.

#### 3.3 Foreign operations

The results and financial position of all the Group entities (none of which has the currency of a hyperinflationary economy) that have a functional currency different from the presentation currency are translated into the presentation currency as follows:

Assets and liabilities are translated at the exchange rate ruling at the reporting date (ZAR/US\$: 14.69; US\$/A\$: 0.77 (2019: ZAR/US\$: 14.00; US\$/A\$: 0.70 and 2018: ZAR/US\$: 14.63; US\$/A\$: 0.70)). Equity items are translated at historical rates. The income and expenses are translated at the average exchange rate for the year (ZAR/US\$: 16.38; US\$/A\$: 0.69 (2019: ZAR/US\$: 14.46; US\$/A\$: 0.70 and 2018: ZAR/US\$: 13.20; US\$/A\$: 0.75)), unless this average was not a reasonable approximation of the rates prevailing on the transaction dates, in which case these items were translated at the rate prevailing on the date of the transaction. Exchange differences on translation are accounted for in other comprehensive income. These differences will be recognised in profit or loss upon realisation of the underlying operation.

On consolidation, exchange differences arising from the translation of the net investment in foreign operations (i.e. the reporting entity's interest in the net assets of that operation), and of borrowings and other currency instruments designated as hedges of such investments, are taken to other comprehensive income. When a foreign operation is sold, exchange differences that were recorded in other comprehensive income are recognised in profit or loss as part of the gain or loss on disposal. If the Group disposes of part of its interest in a subsidiary but retains control, then the relevant proportion of the cumulative amount is reattributed to non-controlling interests. When the Group disposes of only part of an associate or joint venture while retaining significant influence or joint control, the relevant proportion of the cumulative amount is reclassified to profit or loss.

Goodwill and fair value adjustments arising on the acquisition of a foreign operation are treated as assets and liabilities of the foreign operation and are translated at each reporting date at the closing rate.

### 4. PROPERTY, PLANT AND EQUIPMENT

#### 4.1 Mine development and infrastructure

Mining assets, including mine development and infrastructure costs and mine plant facilities, are recorded at cost less accumulated depreciation and accumulated impairment losses.

Expenditure incurred to evaluate and develop new orebodies, to define mineralisation in existing orebodies and to establish or expand productive capacity, is capitalised until commercial levels of production are achieved, at which times the costs are amortised as set out below.

Development of orebodies includes the development of shaft systems and waste rock removal that allows access to reserves that are economically recoverable in the future. Subsequent to this, costs are capitalised if the criteria for recognition as an asset are met.

#### 4.2 Borrowing costs

Borrowing costs incurred in respect of assets requiring a substantial period of time to prepare for their intended future use are capitalised to the date that the assets are substantially completed.

#### 4.3 Mineral and surface rights

Mineral and surface rights are recorded at cost less accumulated amortisation and accumulated impairment losses. When there is little likelihood of a mineral right being exploited, or the fair value of mineral rights has diminished below cost, an impairment loss is recognised in profit or loss in the year that such determination is made.

#### 4.4 Land

Land is shown at cost and is not depreciated.

#### 4.5 Other assets

Non-mining assets are recorded at cost less accumulated depreciation and accumulated impairment losses. These assets include the assets of the mining operations not included in mine development and infrastructure, borrowing costs, mineral and surface rights and land and all the assets of the non-mining operations.

#### 4.6 Amortisation and depreciation of mining assets

Amortisation and depreciation is determined to give a fair and systematic charge to profit or loss taking into account the nature of a particular ore body and the method of mining that ore body. To achieve this, the following calculation methods are used:

- Mining assets, including mine development and infrastructure costs, mine plant facilities and evaluation costs, are amortised over the life of the mine using the units-of-production method, based on estimated proved and probable ore reserves;
- Stripping activity assets are amortised on a units-of-production method, based on the estimated proved and probable ore reserves of the ore body to which the assets relate; and
- The mineral rights asset at the Australian operations are divided at the respective operations into a depreciable and a non-depreciable component. The mineral rights asset is initially capitalised to the mineral rights asset as a non-depreciable component.

Subsequently, and on an annual basis, as part of the preparation of the updated reserve and resource statement and preparation of the updated life-of-mine plan, a portion of resources will typically be converted to reserves as a result of ongoing resource definition drilling, resultant geological model updates and subsequent mine planning. Based on this conversion of resources to reserves a portion of the historic cost is allocated from the non-depreciable component of the mineral rights asset to the depreciable component of the mineral rights asset. Therefore, the category of non-depreciable mineral rights asset is expected to reduce and will eventually be fully allocated within the depreciable component of the mineral rights asset.

Each operation typically comprises a number of mines and the depreciable component of the mineral rights asset is therefore allocated on a mine-by-mine basis at the operation and is transferred at this point to mine development and infrastructure and is then amortised over the estimated proved and probable ore reserves of the respective mine on the units-of-production method. The remaining non-depreciable component of the mineral rights asset is not amortised but, in combination with the depreciable component of the mineral rights asset and other assets included in the CGU, is evaluated for impairment when events and changes in circumstances indicate that the carrying amount may not be recoverable.

Proved and probable ore reserves reflect estimated quantities of economically recoverable reserves, which can be recovered in future from known mineral deposits.

Certain mining plant and equipment included in mine development and infrastructure is depreciated on a straight-line basis over the lesser of their estimated useful lives or life-of-mine.

#### 4.7 Depreciation of non-mining assets

Non-mining assets are recorded at cost and depreciated on a straight-line basis over their current expected useful lives to their residual values.

The assets' useful lives, depreciation methods and residual values are reassessed at each reporting date and adjusted if appropriate.

#### 4.8 Depreciation of right-of-use assets

The right-of-use assets are depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term or the cost of the right-of-use asset reflects that the Group will exercise a purchase option. In that case the right-of-use assets are depreciated over the useful life of the underlying asset. In addition, the right-of-use asset is periodically reduced by impairment losses, if any, and adjusted for certain re-measurements of the lease liability.

## ACCOUNTING POLICIES continued

### 4.9 Mining exploration

Expenditure on advances solely for exploration activities is charged against profit or loss until the viability of the mining venture has been proven. Expenditure incurred on exploration “farm-in” projects is written off until an ownership interest has vested. Exploration expenditure to define mineralisation at existing ore bodies is considered mine development costs and is capitalised until commercial levels of production are achieved.

Exploration activities at certain of the Group’s non-South African operations are broken down into defined areas within the mining lease boundaries. These areas are generally defined by structural and geological continuity. Exploration costs in these areas are capitalised to the extent that specific exploration programmes have yielded targets and/or results that warrant further exploration in future years.

### 4.10 Impairment

Recoverability of the carrying values of long-term assets or CGUs of the Group are reviewed annually or whenever events or changes in circumstances indicate that such carrying values may not be recoverable. To determine whether a long-term asset or CGU may be impaired, the higher of “value in use” (defined as: “the present value of future cash flows expected to be derived from an asset or CGU”) or “fair value less costs of disposal” (defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date”) is compared to the carrying value of the asset/CGU. Impairment losses are recognised in profit or loss.

A CGU is defined by the Group as the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. Generally for the Group this represents an individual operating mine, including mines which are part of a larger mine complex. The costs attributable to individual shafts of a mine are impaired if the shaft is closed.

Exploration targets in respect of which costs have been capitalised at certain of the Group’s international operations are evaluated on an annual basis to ensure that these targets continue to support capitalisation of the underlying costs. Those that do not are impaired.

When any infrastructure is closed down during the year, any carrying value attributable to that infrastructure is impaired.

### 4.11 Gain or loss on disposal of property, plant and equipment

Any gain or loss on disposal of property, plant and equipment (calculated as the net proceeds from disposal less the carrying amount of the item) is recognised in profit or loss.

### 4.12 Leases

The Group applied IFRS 16 from 1 January 2019.

#### Leases recognition under IFRS 16 (applicable from 1 January 2019)

At inception of a contract, the Group assesses whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for a consideration.

The Group recognises a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received. Subsequent to initial recognition, the right-of-use asset is accounted for in accordance with the accounting policy applicable to that asset.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, the Group’s incremental borrowing rate. Generally, the Group uses its incremental borrowing rate as the discount rate.

The Group determines its incremental borrowing rate by obtaining interest rates from various external financing sources and makes certain adjustments to reflect the terms of the lease and type of the asset leased.

Subsequent to initial recognition, the lease liability is measured at amortised cost using the effective interest rate method. It is re-measured when there is a change in future lease payments:

- If there is a change in the Group’s estimate of the amount expected to be payable under a residual value guarantee;
- If the Group changes its assessment of whether it will exercise a purchase, extension or termination option;
- If there is a revised in-substance fixed lease payment; and
- If there is a change in future lease payments resulting from a change in an index or a rate used to determine these payments.

When the lease liability is re-measured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The Group has elected not to recognise right-of-use assets and lease liabilities for leases of low-value assets and short-term leases. The Group recognises the lease payments associated with these leases as an expense on a straight-line basis over the lease term. Low-value assets relate mainly to cellphones, computer equipment and photocopiers.

The Group has elected not to apply the practical expedient to grandfather the assessment of which transactions are leases and applied IFRS 16 to all contracts.

#### **Leases recognition under IAS 17 (applicable before 1 January 2019)**

At the inception of an arrangement, the Group determined whether the arrangement contained a lease. Leases that transfer to the Group substantially all of the risks and rewards of ownership were classified as finance leases. Leased assets were measured initially at an amount equal to the lower of their fair value and the present value of the minimum lease payments. Subsequent to initial recognition, the assets were accounted for in accordance with the accounting policy applicable to that asset.

All other leases were classified as operating leases and were not recognised in the statement of financial position. Operating lease costs were charged against profit or loss on a straight-line basis over the period of the lease.

#### **4.13 Deferred stripping**

Production stripping costs in a surface mine are capitalised to property, plant and equipment if, and only if, all of the following criteria are met:

- It is probable that the future economic benefit associated with the stripping activity will flow to the entity;
- The entity can identify the component of the ore body for which access has been improved; and
- The costs relating to the stripping activity associated with that component can be measured reliably.

If the above criteria are not met, the stripping costs are recognised directly in profit or loss.

The Group initially measures the stripping activity asset at cost, this being the accumulation of costs directly incurred to perform the stripping activity that improves access to the identified component of ore.

After initial recognition, the stripping activity asset is carried at cost less accumulated amortisation and accumulated impairment losses.

### **5. TAXATION**

Income tax expense comprises current and deferred tax. Current tax and deferred tax are recognised in profit or loss except to the extent that it relates to a business combination, or items recognised directly in equity or in other comprehensive income.

Current tax is measured on taxable income at the applicable statutory rate substantively enacted at the reporting date.

Interest and penalties are accounted for in current tax.

Deferred taxation is provided on temporary differences existing at each reporting date between the tax values of assets and liabilities and their carrying amounts. Substantively enacted tax rates are used to determine future anticipated tax rates which in turn are used in the determination of deferred taxation.

Deferred taxation is not recognised for temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and taxable temporary differences arising on the initial recognition of goodwill.

The measurement of deferred tax reflects the tax consequences that would follow the manner in which the Group expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

These temporary differences are expected to result in taxable or deductible amounts in determining taxable profits for future periods when the carrying amount of the asset is recovered or the liability is settled.

Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax liabilities are recognised for taxable temporary differences arising on investments in subsidiaries and equity-accounted investees except where the reversal of the temporary difference can be controlled and it is probable that the difference will not reverse in the foreseeable future.

Deferred tax assets relating to the carry forward of unutilised tax losses and/or deductible temporary differences are recognised to the extent it is probable that future taxable profit will be available against which the unutilised tax losses and/or deductible temporary differences can be recovered. Deferred tax assets are reviewed at each reporting date and are adjusted if recovery is no longer probable.

## ACCOUNTING POLICIES continued

Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets, and they relate to taxes levied by the same tax authority on the same taxable entity, or on different tax entities, but they intend to settle current tax liabilities and assets on a net basis or their tax assets and liabilities will be realised simultaneously.

When assessing uncertain tax positions, the Group considers whether it is probable that the relevant authority will accept each tax treatment, or group of tax treatments, that the Group used or plans to use in its income tax filing.

Except for Tarkwa and Cerro Corona, no provision is made for any potential taxation liability on the distribution of retained earnings by Group companies as it is probable that the related taxable temporary differences will not reverse in the foreseeable future.

### 6. INVENTORIES

Inventories are valued at the lower of cost and net realisable value. Gold on hand represents production on hand after the smelting process.

Cost is determined on the following basis:

- Gold on hand and gold in process is valued using weighted average cost. Cost includes production, amortisation and related administration costs;
- Heap leach and stockpile inventories are valued using weighted average cost. Cost includes production, amortisation and direct administration costs. The cost of materials on the heap leach and stockpiles, from which metals are expected to be recovered in a period longer than 12 months is classified as non-current assets; and
- Consumable stores are valued at weighted average cost, after appropriate provision for redundant and slow-moving items.

Net realisable value is determined with reference to relevant market prices or the estimated future sales price of the product if it is expected to be realised in the long term.

### 7. FINANCIAL INSTRUMENTS

#### 7.1 Non-derivative financial instruments

##### Recognition and initial measurement

Trade receivables are initially recognised when they are originated. All other financial assets and financial liabilities are initially recognised when the Group becomes a party to the contractual provisions of the instrument. A financial asset or financial liability is initially measured at fair value plus, for an item not at fair value through profit or loss ("FVTPL"), transaction costs that are directly attributable to its acquisition or issue. A trade receivable without a significant financing component is initially measured at the transaction price.

##### Classification and subsequent measurement

###### Financial assets – Classification policy

On initial recognition, an equity instrument is either classified as fair value through other comprehensive income ("FVOCI") if an irrevocable election is made or FVTPL.

On initial recognition, a debt instrument is classified as:

- Amortised cost;
- FVOCI; and
- FVTPL.

A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at FVTPL:

- It is held with a business model whose objective is to collect contractual cash flows; and
- Its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

An investment is measured at FVOCI if it meets both of the following conditions and is not designated as at FVTPL:

- It is held with a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and
- Its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

All financial assets not classified as measured at amortised cost or FVOCI as described above are measured at FVTPL. This includes all derivative financial assets.

### Financial assets – Measurement policy

Financial asset category	Description
Financial assets at amortised cost	These assets are subsequently measured at amortised cost using the effective interest method. The amortised cost is reduced by impairment losses. Interest income, foreign exchange gains and losses and impairment are recognised in profit or loss. Any gain or loss on derecognition is recognised in profit or loss.
Equity investments at FVOCI	These assets are subsequently measured at fair value. Dividends are recognised as income in profit or loss unless the dividend clearly represents a recovery of part of the cost of the investment. Other net gains and losses are recognised in OCI and are never reclassified to profit or loss.
Financial assets at FVTPL	These assets are subsequently measured at fair value. Net gains and losses, including any interest or dividend income, are recognised in profit or loss.

### Financial assets – Classification of financial assets

The following information is considered by the Group in determining the classification of financial assets:

- The Group’s business model for managing financial assets; and
- The contractual cash flow characteristics of the financial assets.

The business model assessment of the financial assets is based on the Group’s strategy and rationale for holding the financial assets on a portfolio level. When considering the strategy, the following is considered:

- Whether the financial assets are held to collect contractual cash flows;
- Whether the financial assets are held for sale; and
- Whether the financial assets are held for both collecting contractual cash flows and to be sold.

### Financial assets – Assessment of contractual cash flows

In assessing whether the contractual cash flows are solely payments of principal and interest, the Group considers the contractual terms of the instrument. This includes assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cash flows such that it would not meet this condition.

### Financial liabilities – Classification, subsequent measurement and gains and losses

Financial liabilities are classified as measured at amortised cost or FVTPL. A financial liability is classified as at FVTPL if it is classified as held-for-trading, it is a derivative or it is designated as such on initial recognition. Financial liabilities at FVTPL are measured at fair value and net gains and losses, including any interest expense, are recognised in profit or loss. Other financial liabilities are subsequently measured at amortised cost using the effective interest method. Interest expense and foreign exchange gains and losses are recognised in profit or loss. Any gain or loss on derecognition is also recognised in profit or loss.

### Impairment

The Group recognises loss allowances for expected credit losses (“ECLs”) on financial assets measured at amortised cost. When determining whether the credit risk of a financial asset has increased significantly since initial recognition and when estimating ECLs, the Group considers reasonable and supportable information that is relevant and available without undue cost or effort. This includes both quantitative and qualitative information and analysis, based on the Group’s historical experience and informed credit assessment and including forward-looking information. The maximum period considered when estimating ECLs is the maximum contractual period over which the Group is exposed to credit risk.

ECLs are a probability-weighted estimate of credit losses. Credit losses are measured as the present value of all cash shortfalls (i.e. the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Group expects to receive). At each reporting date, the Group assesses whether financial assets carried at amortised cost are credit impaired. A financial asset is “credit impaired” when one or more events that have a detrimental impact on the estimated future cash flows of the financial asset have occurred.

### Derecognition of financial instruments

The Group derecognises a financial asset when the contractual rights to the cash flows from the financial asset expire, or it transfers the rights to receive the contractual cash flows in a transaction in which substantially all of the risks and rewards of ownership of the financial asset are transferred or in which the Group neither transfers nor retains substantially all of the risks and rewards of ownership and it does not retain control of the financial asset.

## ACCOUNTING POLICIES continued

The Group derecognises a financial liability when its contractual obligations are discharged or cancelled, or expire. The Group also derecognises a financial liability when its terms are modified and the cash flows of the modified liability are substantially different, in which case a new financial liability based on the modified terms is recognised at fair value. On derecognition of a financial liability, the difference between the carrying amount extinguished and the consideration paid (including any non-cash assets transferred or liabilities assumed) is recognised in profit or loss.

### 7.1.1 Investments

Investments comprise listed and unlisted equity instruments which are designated at FVOCI and are accounted for at fair value, with unrealised gains and losses subsequent to initial recognition recognised in other comprehensive income and included in other reserves. Profit or loss realised when investments are sold or impaired are never reclassified to profit or loss.

Purchases and sales of investments are recognised on the trade date, which is the date that the Group commits to purchase or sell the asset. Cost of purchase includes transaction costs. The fair value of listed investments is based on quoted bid prices.

On disposal or impairment of financial assets classified at FVOCI, cumulative unrealised gains and losses previously recognised in other comprehensive income are included in determining the profit or loss on disposal, or the impairment charge relating to, that financial asset, respectively, which is recognised in other comprehensive income.

### 7.1.2 Cash and cash equivalents

Cash and cash equivalents comprise cash on hand, demand deposits and short-term, highly liquid investments readily convertible to known amounts of cash and subject to insignificant risk of changes in value and are measured at amortised cost which is deemed to be fair value as they have a short-term maturity.

Bank overdrafts are included within current liabilities in the statement of financial position and within cash and cash equivalents in the statement of cash flows.

### 7.1.3 Trade receivables

Trade receivables are carried at amortised cost less ECLs using the Group's business model for managing its financial assets, except for trade receivables from provisional copper and gold concentrate. The trade receivables from provisional copper and gold concentrate sales are carried at fair value through profit or loss and are marked-to-market at the end of each period until final settlement occurs, with changes in fair value classified as provisional price adjustments and included as a component of revenue.

### 7.1.4 Environmental trust funds

The environmental trust funds comprise mainly term deposits which are recognised at amortised cost less ECLs using the Group's business model for managing its financial assets.

### 7.1.5 Trade payables

Trade payables are recognised at amortised cost using the effective interest method.

### 7.1.6 Borrowings

Borrowings are recognised initially at fair value, net of transaction costs incurred, where applicable and subsequently measured at amortised cost using the effective interest method.

Borrowings are classified as current liabilities unless the Group has an unconditional right to defer settlement of the liability for at least 12 months after the reporting date.

Interest payable on borrowings is recognised in profit or loss over the term of the borrowings using the effective interest method. Finance expense comprises interest on borrowings and environmental rehabilitation costs offset by interest capitalised on qualifying assets.

Cash flows from interest paid are classified under operating activities in the statement of cash flows.

## 7.2 Derivative financial instruments

The Group may from time to time establish currency and/or interest rate and/or commodity financial instruments to protect underlying cash flows.

Derivative financial instruments are initially recognised at fair value and subsequently re-measured to their fair value with changes therein recognised in profit or loss.

## 8. PROVISIONS

Provisions are recognised when the Group has a present legal or constructive obligation resulting from past events and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

## 9. PROVISION FOR ENVIRONMENTAL REHABILITATION COSTS

Long-term provisions for environmental rehabilitation costs are based on the Group's environmental management plans, in compliance with applicable environmental and regulatory requirements.

Rehabilitation work can include facility decommissioning and dismantling, removal or treatment of waste materials, site and land rehabilitation, including compliance with and monitoring of environmental regulations, security and other site-related costs required to perform the rehabilitation work and operations of equipment designed to reduce or eliminate environmental effects.

Full provision is made based on the net present value of the estimated cost of restoring the environmental disturbance that has occurred up to the reporting date. The unwinding of the obligation is accounted for in profit or loss.

The estimated costs of rehabilitation are reviewed annually and adjusted as appropriate for changes in legislation, technology or other circumstances. Cost estimates are not reduced by the potential proceeds from the sale of assets or from plant clean up at closure.

Changes in estimates are capitalised or reversed against the relevant asset, except where a reduction in the provision is greater than the remaining net book value of the related asset, in which case the value is reduced to nil and the remaining adjustment is recognised in profit or loss. In the case of closed sites, changes in estimates and assumptions are recognised in profit or loss. Estimates are discounted at the pre-tax risk-free rate in the jurisdiction of the obligation.

Increases due to additional environmental disturbances are capitalised and amortised over the remaining lives of the mines. These increases are accounted for on a net present value basis.

For the South African and Ghanaian operations, annual contributions are made to a dedicated rehabilitation trust fund and dedicated bank account, respectively, to fund the estimated cost of rehabilitation during and at the end of the life-of-mine. The amounts contributed to this trust fund/bank account are included under non-current assets. Interest earned on monies paid to rehabilitation trust fund/bank account is accrued on a time proportion basis and is recorded as interest income.

In respect of the South African, Ghanaian and Peruvian operations, bank and other guarantees are provided for funding of the environmental rehabilitation obligations. Refer to financial instruments accounting policy 7.1.4 Environmental trust fund and note 34 of the consolidated financial statements.

## 10. EMPLOYEE BENEFITS

### 10.1 Short-term employee benefits

Short-term employee benefits are expensed as the related service is provided. A liability is recognised for the amount expected to be paid if the Group has a present legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

### 10.2 Pension and provident funds

The Group operates a defined contribution retirement plan and contributes to a number of industry-based defined contribution retirement plans. The retirement plans are funded by payments from employees and Group companies.

Contributions to defined contribution funds are recognised as an employee benefit expense in profit or loss in the periods during which related services are rendered by employees.

### 10.3 Share-based payments

The Group operates an equity-settled compensation plan. The fair value of the equity-settled instruments is measured by reference to the fair value of the equity instrument granted which in turn is determined using the Black-Scholes and Monte Carlo simulation models on the date of grant.

Fair value is based on market prices of the equity-settled instruments granted, if available, taking into account the terms and conditions upon which those equity-settled instruments were granted. Fair value of equity-settled instruments granted is estimated using appropriate valuation models and appropriate assumptions at grant date. Non-market vesting conditions (service period prior to vesting) are not taken into account when estimating the fair value of the equity-settled instruments at grant date. Market conditions are taken into account in determining the fair value at grant date.

The fair value of the equity-settled instruments is recognised as an employee benefit expense over the vesting period based on the Group's estimate of the number of instruments that will eventually vest, with a corresponding increase in equity. Vesting assumptions for non-market conditions are reviewed at each reporting date to ensure they reflect current expectations.

## ACCOUNTING POLICIES continued

Where the terms of an equity-settled award are modified, the originally determined expense is recognised as if the terms had not been modified. In addition, an expense is recognised for any modification, which increases the total fair value of the share-based payment arrangement, or is otherwise beneficial to the participant as measured at the date of the modification.

### 10.4 Long-term incentive plan

The Group operates a long-term incentive plan.

The Group's net obligation in respect of the long-term incentive plan is the amount of future benefit that employees have earned in return for their services in the current and prior periods. That benefit is estimated using appropriate assumptions and is discounted to determine its present value at each reporting date. Re-measurements are recognised in profit or loss in the period in which they arise.

### 10.5 Termination benefits

Termination benefits are payable when employment is terminated by the Group before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. Termination benefits are expensed at the earlier of the date the Group can no longer withdraw the offer of those benefits or the date the Group recognises costs for a restructuring. Benefits falling due more than 12 months after the reporting date are discounted to present value.

## 11. STATED CAPITAL

### 11.1 Ordinary share capital

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of ordinary shares are recognised as a deduction from equity, net of any tax effects.

### 11.2 Repurchase and reissue of share capital

When share capital recognised as equity is repurchased, the amount of the consideration paid, which includes directly attributable costs, net of any tax effects, is recognised as a deduction from equity. Repurchased shares are classified as treasury shares and are deducted from equity. When treasury shares are sold or reissued subsequently, the amount received is recognised as an increase in equity, and the resulting surplus or deficit on the transaction is presented in share premium.

## 12. REVENUE FROM CONTRACTS WITH CUSTOMERS

The Group recognises revenue when control over its gold, copper and silver is transferred to the customer. The price is determined by market forces (gold price and exchange rates). Revenue is measured based on the consideration specified in a contract with the customer.

Customers obtain control of gold, copper and silver on the settlement date and there are no payment terms except for copper and gold concentrate sales in Peru. In Peru, customers obtain control of copper and gold concentrate on the shipment date. Copper and gold concentrate revenue is calculated, net of refining and treatment charges, on a best estimate basis on shipment date, using forward metal prices to the estimated final pricing date, adjusted for the specific terms of the agreements. Variations between the price recorded at the shipment date and the actual final price received are caused by changes in prevailing copper and gold prices. Changes in the fair value as a result of changes in the forward metal prices are classified as provisional price adjustments and included as a component of revenue.

## 13. INVESTMENT INCOME

Investment income comprises interest income on funds invested and dividend income from listed and unlisted investments.

Investment income is recognised to the extent that it is probable that economic benefits will flow to the Group and the amount of investment income can be reliably measured. Investment income is stated at the fair value of the consideration received or receivable.

### 13.1 Dividend income

Dividends are recognised in profit or loss when the right to receive payment is established

### 13.2 Interest income

Interest income is recognised in profit or loss using the effective interest rate method. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument to the gross carrying amount of the financial asset or amortised cost of the financial liability.

Cash flows from dividends and interest received are classified under operating activities in the statement of cash flows.

#### 14. DIVIDENDS DECLARED

Dividends and the related taxation thereon are recognised only when such dividends are declared.

Dividends withholding tax is a tax on shareholders receiving dividends and is applicable to all dividends paid. The Group withholds dividends tax on behalf of its shareholders at a rate of 20% on dividends paid. Amounts withheld are not recognised as part of the Group's tax charge but rather as part of the dividend paid recognised directly in equity.

Cash flows from dividends paid are classified under operating activities in the statement of cash flows.

#### 15. EARNINGS PER SHARE

The Group presents basic and diluted earnings per share. Basic earnings per share is calculated based on the profit attributable to ordinary shareholders divided by the weighted average number of ordinary shares in issue during the period. Diluted earnings per share is determined by adjusting the profit attributable to ordinary shareholders, if applicable, and the weighted average number of ordinary shares in issue for ordinary shares that may be issued in the future.

#### 16. NON-CURRENT ASSETS HELD FOR SALE

Non-current assets (or disposal groups) comprising assets and liabilities, are classified as held for sale if it is highly probable they will be recovered primarily through sale rather than through continuing use. These assets may be a component of an entity, a disposal group or an individual non-current asset.

Non-current assets held for sale are stated at the lower of carrying amount and fair value less costs to sell. Once classified as held for sale or distribution, property, plant and equipment is no longer amortised or depreciated.

#### 17. SEGMENTAL REPORTING

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision-maker ("CODM") and is based on individual mining operations. The CODM, who is responsible for allocating resources and assessing performance of the operating segments, has been identified as the Executive Committee that makes strategic decisions.

#### 18. HEADLINE EARNINGS

Headline earnings is an additional earnings number that is permitted by IAS 33 *Earnings per Share* ("IAS 33") as set out in the SAICA Circular 1/2019 ("Circular"). The starting point is earnings as determined in IAS 33, excluding separately identifiable re-measurements net of related tax (both current and deferred) and related non-controlling interest, other than re-measurements specifically included in headline earnings. A re-measurement is an amount recognised in profit or loss relating to any change (whether realised or unrealised) in the carrying amount of an asset or liability that arose after the initial recognition of such asset or liability. Included re-measurement items are included in section C of the Circular.

## CONSOLIDATED INCOME STATEMENT

The accompanying notes form an integral part of these financial statements.

<sup>1</sup> Accumulated other comprehensive income mainly comprises foreign currency translation.

<sup>2</sup> Other reserves include share-based payments and share of equity-accounted investee's other comprehensive income. The aggregate of accumulated other comprehensive income and other reserves in the consolidated statement of changes in equity is disclosed in the Consolidated statement of financial position as other reserves.

<sup>3</sup> On 12 February 2020 Gold Fields successfully completed the placing of 41,431,635 new ordinary, no par value shares with existing and new institutional investors at a price of R90.20 per share. The placing issued represented, in aggregate, approximately 5% of the Company's issued ordinary share capital prior to the placing. Gross proceeds of approximately R3.7 billion (US\$249.0 million) were raised through the placing.

<sup>4</sup> On 6 December 2020, per the South Deep BEE transaction an economic interest of 3.57% in Newshelf 899 (Proprietary) Limited vested to the BEE non-controlling interest holders. Refer to note 42 for further details.

Interest expense – borrowings	<b>(105.3)</b>	(114.0)	(91.6)
Borrowing costs capitalised <sup>3</sup>	<b>13.2</b>	43.4	17.5
<b>Total finance expense</b>	<b>(126.7)</b>	(102.2)	(88.0)

<sup>1</sup> All regions.

<sup>2</sup> Only Peru region (Cerro Corona).

<sup>3</sup> Borrowing costs capitalised of US\$13.2 million (2019: US\$43.4 million) comprise borrowing costs relating to general borrowings of US\$13.2 million (2019: US\$31.0 million) and specific borrowings of US\$nil (2019: US\$12.4 million). The specific borrowings of US\$nil (2019: US\$12.4 million) relate to the Gruyere project and are included in additions to property, plant and equipment of US\$nil (2019: US\$612.5 million) (refer note 14).

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 5. SHARE-BASED PAYMENTS

The Group granted equity-settled instruments comprising share options and restricted shares to Executive Directors, certain officers and employees. During the year ended 31 December 2020, the Gold Fields Limited 2012 share plan as amended in 2016 was in place. Allocations under this plan were made during 2018, 2019 and 2020.

#### Gold Fields Limited 2012 share plan amended – awards after 1 March 2016

At the Annual General Meeting on 18 May 2016, shareholders approved the adoption of the revised Gold Fields Limited 2012 share plan to replace the long-term incentive scheme (“LTIP”). The plan provides for four types of participation, namely performance shares (“PS”), retention shares (“RS”), restricted shares (“RSS”) and matching shares (“MS”). This plan is in place to attract, retain, motivate and reward participating employees on a basis which seeks to align the interests of such employees with those of the Company’s shareholders. Currently, the last vesting date is 31 January 2024.

The expense is as follows:

	United States Dollar		
<i>Figures in millions unless otherwise stated</i>	2020	2019	2018
Share-based payments	(14.5)	(20.5)	(37.5)
<b>Total included in profit or loss for the year</b>	<b>(14.5)</b>	<b>(20.5)</b>	<b>(37.5)</b>

The salient features of the plan are:

- PS are offered to participants annually from March. PS are performance-related shares, granted at zero cost (the shares are granted in exchange for the rendering of service by participants to the Group during the three-year restricted period prior to the share vesting period);
- Based on the rules of the plan, the actual number of PS which will be settled to a participant three years after the original award date is determined by the following performance conditions:

Performance condition	Weighting	Threshold	Target	Stretch and cap
Absolute total shareholder return (“TSR”)	33%	N/A – No vesting below target	Compounded cost of equity in real terms over three-year performance period	Compounded cost of equity in real terms over three-year performance period +6% per annum
Relative TSR	33%	Median of the peer group	Linear vesting to apply between median and upper quartile performance and capped at upper quartile performance	
Free cash flow margin, as defined in the share plan (“FCFM”)	34%	Average FCFM over performance period of 5% at a gold price of US\$1,300/oz for the 2020 and 2018 allocation (2019 allocations: US\$1,200/oz) – margin to be adjusted relative to the actual gold price for the three-year period	Average FCFM over performance period of 15% at a gold price of US\$1,300/oz for the 2020 and 2018 allocation (2019 allocations: US\$1,200/oz) – margin to be adjusted relative to the actual gold price for the three-year period	Average FCFM over performance period of 20% at a gold price of US\$1,300/oz for the 2020 and 2018 allocation (2019 allocations: US\$1,200/oz) – margin to be adjusted relative to the actual gold price for the three-year period

## 5. SHARE-BASED PAYMENTS (continued)

### Gold Fields Limited 2012 share plan amended – awards after 1 March 2016 (continued)

The vesting profile will be as follows:

Performance condition	Threshold	Target	Stretch and cap
Absolute TSR <sup>1,4</sup>	0%	100%	200%
Relative TSR <sup>1,3,4</sup>	0%	100%	200%
FCFM <sup>2</sup>	0%	100%	200%

<sup>1</sup> Absolute TSR and relative TSR: Linear vesting will occur between target and stretch (no vesting occurs for performance below target).

<sup>2</sup> FCFM: Linear vesting will occur between threshold, target and stretch.

<sup>3</sup> The peer group for the 2018 and 2019 allocations consists of 10 companies: AngloGold Ashanti, Goldcorp, Barrick, Eldorado Gold, Randgold, Yamana, Agnico Eagle, Kinross, Newmont and Newcrest. During 2019, Randgold merged with Barrick and Goldcorp merged with Newmont. The peer group will remain at 10 companies by maintaining phantom share tracking for Randgold and Goldcorp based on their respective merger ratios at the date of the merger. The peer group for the 2020 allocation consists of 10 companies: AngloGold Ashanti, Barrick, Eldorado Gold, Yamana, Agnico Eagle, Kinross, Newmont, Newcrest, Northern Star and Endeavour Mining.

<sup>4</sup> TSR will be calculated as the compounded annual growth rate ("CAGR") of the TSR index between the average of the 60 trading days up to the first day of the performance period and the average of the 60 trading days up to the last day of the performance period. TSR will be defined as the return on investing in ordinary shares in the Company at the start of the performance period, holding the shares and reinvesting the dividends received on the portfolio in Gold Fields shares over the performance period. The US\$ TSR index, provided by external service providers will be based on the US\$ share price.

- **RSS:** In 2016, Gold Fields implemented a minimum shareholding requirement ("MSR") where executives are required to build and to hold a percentage of their salary in Gold Fields shares over a period of five years. Executives will be given the opportunity (as at the approval date of the MSR), prior to the annual bonus being communicated or the upcoming vesting date of the LTIP award or PS, to elect to receive all or a portion of their annual bonus or cash LTIP in restricted shares or to convert all or a portion of their unvested PS into restricted shares towards fulfilment of the MSR. These shares are subject to the holding period as set out below:

This holding period will mean that the restricted shares may not be sold or disposed of and that the beneficial interest must be retained therein until the earlier of:

- Notice given by the executive, provided that such notice may only be given after five years from the start of the holding period;
  - Termination of employment of that employee, i.e. retirement, retrenchment, ill health, death, resignation or dismissal;
  - Abolishment of the MSR; or
  - In special circumstances such as proven financial hardship or compliance with the MSR, upon application by the employee and approval by the Remuneration Committee.
- **MS:** To facilitate the introduction of the MSR policy and to compensate executives for participating in RSS and holding their shares for an additional five years, thus exposing themselves to further market volatility, the Company intends to make a matching award. This is intended to entail a conditional award of shares of one share for every three shares committed towards the MSR (matching shares), rounded to the nearest full share. The matching shares will vest on a date that corresponds with the end of the holding period of the shares committed towards the MSR provided the executive is still in the employment of the Company and has met the MSR requirements of the MSR policy, including having sustainably accumulated shares to reach the MSR over the five year holding period.

At 31 December 2020, the maximum number of matching shares that could vest, based on shares already committed to MSR, at the end of five years was 469,133 (2019: 441,604 and 2018: 407,223) shares.

**The following table summarises the movement of share options under the Gold Fields Limited 2012 share plan as amended in 2016 during the years ended 31 December 2020, 2019 and 2018:**

	2020	2019	2018
	Performance Shares ("PS")	Performance Shares ("PS")	Performance Shares ("PS")
<b>Outstanding at beginning of the year</b>	<b>14,833,390</b>	18,361,977	18,279,130
Movement during the year:			
Granted	<b>1,581,749</b>	4,558,177	811,829
Exercised and released	<b>(7,825,571)</b>	(6,611,023)	–
Forfeited	<b>(1,606,730)</b>	(1,475,741)	(728,982)
<b>Outstanding at end of the year</b>	<b>6,982,838</b>	14,833,390	18,361,977

At 31 December 2020, none of the outstanding options of 6,982,838 had vested.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 5. SHARE-BASED PAYMENTS (continued)

#### Gold Fields Limited 2012 share plan amended – awards after 1 March 2016 (continued)

The fair value of equity instruments granted during the year ended 31 December 2020, 2019 and 2018 were valued using the Monte Carlo simulation model:

	2020	2019	2018
<b>Monte Carlo simulation</b>			
<b>Performance shares</b>			
The inputs to the model for options granted during the year were as follows:			
– weighted average historical volatility (based on a statistical analysis of the share price on a weighted moving average basis for the expected term of the option)	<b>58.4%</b>	44.7%	58.6%
– expected term (years)	<b>3 years</b>	3 years	3 years
– dividend yield <sup>1</sup>	<b>n/a</b>	n/a	n/a
– weighted average three-year risk free interest rate (based on US interest rates)	<b>0.3%</b>	1.4%	2.0%
– weighted average fair value (United States Dollars)	<b>6.4</b>	5.7	5.0

<sup>1</sup> There is no dividend yield applied to the Monte Carlo simulation model as the performance conditions follow a total shareholder return method.

The weighted average share price for the year ended 31 December 2020 on the Johannesburg Stock Exchange (US\$) was US\$9.25 (2019: US\$4.82 and 2018: US\$3.46).

The compensation costs related to awards not yet recognised under the above plans at 31 December 2020, 2019 and 2018 amount to US\$19.7 million, US\$17.5 million and US\$20.8 million, respectively, and are to be recognised over four years.

The Directors were authorised to issue and allot all or any of such shares required for the plans, but in aggregate all plans may not exceed 44,166,676 of the total issued ordinary stated capital of the Company. An individual participant may also not be awarded an aggregate of shares from all or any such plans exceeding 4,416,668 of the Company's total issued ordinary stated capital. The unexercised options and shares under all plans represented 0.8% of the total issued stated capital at 31 December 2020.

<i>Figures in millions unless otherwise stated</i>		2020	2019	2018
<b>6. EXPLORATION EXPENSE</b>				
Australia		(16.9)	(30.0)	(37.7)
Ghana		–	–	(0.4)
Peru		(1.4)	(4.4)	(1.1)
Chile		(30.1)	(49.1)	(61.5)
Other		(1.3)	(0.9)	(3.5)
<b>Total exploration expense</b>		<b>(49.7)</b>	(84.4)	(104.2)
<b>7. IMPAIRMENT, NET OF REVERSAL OF IMPAIRMENT OF INVESTMENTS AND ASSETS</b>				
<b>Investments</b>		<b>62.3</b>	(9.6)	(36.9)
Equity-accounted investees				
– Far Southeast Gold Resources Incorporated (“FSE”) <sup>1</sup>		62.3	(9.6)	(36.9)
<b>Property, plant and equipment</b>		<b>(11.7)</b>	(0.2)	(411.7)
Impairment of property, plant and equipment – other <sup>2</sup>		(11.7)	(0.2)	(1.9)
South Deep cash-generating unit <sup>3</sup>		–	–	(409.8)
<b>Goodwill</b>		<b>–</b>	–	(71.7)
South Deep goodwill <sup>3</sup>		–	–	(71.7)
<b>Impairment, net of reversal of impairment of investments and assets</b>		<b>50.6</b>	(9.8)	(520.3)

<sup>1</sup> Following the identification of impairment indicators during 2018 and 2019, FSE was valued at its recoverable amount which resulted in a net impairment of US\$36.9 million and US\$9.6 million, respectively. During 2020, FSE’s recoverable amount was determined to be higher than the carrying value due to an increase in commodity prices that resulted in an increase in Lepanto Consolidated Mining Company’s share price and a net reversal of US\$62.3 million was recorded. The net reversal is limited to previous impairments recognised. The recoverable amount was based on the fair value less cost of disposal (“FVL COD”) of the investment (level 2 in the fair value hierarchy). The FVL COD was indirectly derived from the market value of Lepanto Consolidated Mining Company, being the 60% shareholder of FSE. The impairment/reversal of impairment is included in the “Corporate and other” segment.

<sup>2</sup> The US\$11.7 million in 2020 comprise US\$9.8 million (2019: US\$nil and 2018: US\$nil) impairment of drilling costs at Damang (based on technical and economic parameters of various studies, all assets related to the Amoanda-Tomento corridor were impaired) and US\$1.9 million (2019: US\$0.2 million and 2018: US\$1.9 million) impairment of redundant assets in Peru.

<sup>3</sup> For the year ended 31 December 2018, the Group recognised an impairment of R6,470.9 million (US\$481.5 million) in respect of the South Deep cash-generating unit due to the deferral of production. R963.9 million (US\$71.7 million) of the total impairment was firstly allocated against goodwill and the remainder of R5,507.0 million (US\$409.8 million) against other assets. The recoverable amount was based on its FVL COD calculated using a combination of the market and the income approach (level 3 of the fair value hierarchy). No impairment or reversal of impairment was recognised in 2020 or 2019.

	Peru <sup>9</sup>	3.9%	3.6%	4.0%

<sup>1</sup> Included under "Other costs, net" in the consolidated income statement.

<sup>2</sup> Refer note 13.2 for further details.

<sup>3</sup> The loss on sale of inventory related to the sale of inventory at Tarkwa as part of the transition to contractor mining.

<sup>4</sup> The restructuring costs in 2020 comprise mainly separation packages at Tarkwa amounting to US\$1.2 million (2019: US\$0.3 million and 2018: US\$88.8 million), St Ives of US\$0.8 million (2019: US\$nil and 2018: US\$nil), South Deep amounting to US\$nil (2019: US\$0.3 million and 2018: US\$11.2 million) and Damang amounting to US\$nil (2019: US\$nil and 2018: US\$13.9 million). The restructuring costs of US\$88.8 million at Tarkwa in 2018 related to the transition to contractor mining.

<sup>5</sup> The US\$23.9 million income related to a submission of VAT claims for expenses incurred from 2010 to June 2020 at Salares Norte to the Chilean tax authority which become claimable from the commencement of construction in 2020.

<sup>6</sup> The Mineral and Petroleum Resource Royalty Act 2008 ("Royalty Act") was promulgated on 24 November 2008 and became effective from 1 March 2010. The Royalty Act imposes a royalty on refined (mineral resources that have undergone a comprehensive level of beneficiation such as smelting and refining as defined in Schedule 1 of the Royalty Act) and unrefined (mineral resources that have undergone limited beneficiation as defined in Schedule 2 of the Royalty Act) minerals payable to the state. The royalty in respect of refined minerals (which include gold refined to 99.5% and above and platinum) is calculated by dividing earnings before interest and taxes ("EBIT") by the product of 12.5 times gross revenue calculated as a percentage, plus an additional 0.5%. EBIT refers to taxable mining income (with certain exceptions such as no deduction for interest payable and foreign exchange losses) before assessed losses but after capital expenditure. A maximum royalty of 5% has been introduced on refined minerals. The effective rate of royalty tax payable for the year ended 31 December 2020 was 0.5% of mining revenue (2019: 0.5% and 2018: 0.5%) equalling the minimum charge per the formula.

<sup>7</sup> The Australian operations are subject to a 2.5% (2019: 2.5% and 2018: 2.5%) gold royalty on revenue as the mineral rights are owned by the state.

<sup>8</sup> Minerals are owned by the Republic of Ghana and held in trust by the President. During 2016, Gold Fields signed a Development Agreement ("DA") with the Government of Ghana for both the Tarkwa and Damang mines. This agreement stated that the Ghanaian operations will be subject to a sliding scale for royalty rates, linked to the prevailing gold price (effective 1 January 2017). The sliding scale is as follows:

Average gold price		Royalty rate
Low value	High value	
US\$0.00	– US\$1,299.99	3.0%
US\$1,300.00	– US\$1,449.99	3.5%
US\$1,450.00	– US\$2,299.99	4.1%
US\$2,300.00	– Unlimited	5.0%

<sup>9</sup> The Peruvian operations are subject to a mining royalty calculated on a sliding scale with rates ranging from 1% to 12% of the value of operating profit.

United States Dollar

Figures in millions unless otherwise stated

10. MINING AND INCOME TAXATION

The components of mining and income tax are the following:

**South African taxation**

– Company and capital gains taxation	(4.5)	(2.9)	(1.1)
– prior year adjustment – current taxation	(0.5)	0.2	0.7
– deferred taxation	(25.8)	(0.3)	208.5

**Foreign taxation**

– current taxation	(356.2)	(184.1)	(127.9)
– dividend withholding tax	(5.2)	(2.7)	(13.7)
– prior year adjustment – current taxation	(0.1)	(1.1)	(3.7)
– deferred taxation	(40.2)	15.3	3.1

**Total mining and income taxation**

(432.5) (175.6) 65.9

Major items causing the Group's income taxation to differ from the maximum South African statutory mining tax rate of 34.0% (2019: 34.0% and 2018: 34.0%) were:

Taxation on profit before taxation at maximum South African statutory mining tax rate	(400.5)	(119.1)	139.6
Rate adjustment to reflect the actual realised company tax rates in South Africa and offshore	45.6	17.9	(6.7)
Non-deductible share-based payments	(4.9)	(7.0)	(12.8)
Non-deductible exploration expense	(0.4)	(17.0)	(22.1)
Deferred tax assets not recognised on reversal of impairment of investments (2019 and 2018: deferred tax assets not recognised on impairment of investments) <sup>1</sup>	21.2	(3.3)	(12.5)
Impairment of South Deep goodwill	–	–	(24.4)
Non-deductible interest paid	(31.2)	(29.9)	(25.5)
Share of results of equity-accounted investees, net of taxation	(0.9)	1.1	(4.5)
Non-taxable gain on acquisition of Asanko	–	–	17.6
Non-taxable fair value gain on Maverix warrants	0.4	1.4	1.3
Non-taxable profit on disposal of Maverix (2018: dilution of Gold Fields' interest in Maverix)	–	5.0	1.4
Dividend withholding tax	(5.9)	(2.9)	(15.5)
Net non-deductible expenditure and non-taxable income	(0.7)	(10.5)	(7.6)
Deferred tax on unremitted earnings at Tarkwa and Cerro Corona	1.3	(4.5)	(1.1)
Deferred taxation movement on Peruvian Nuevo Sol devaluation against US Dollar <sup>2</sup>	(7.5)	0.1	(1.2)
Various Peruvian non-deductible expenses	(5.8)	(6.6)	(7.5)
Deferred tax assets not recognised at Cerro Corona <sup>3</sup>	(0.1)	(3.3)	(14.9)
Deferred tax assets not recognised at Damang and Tarkwa (2018: recognised at Damang) <sup>4</sup>	(50.9)	–	6.5
Deferred tax assets recognised at Salares Norte <sup>5</sup>	12.8	–	–
Additional capital allowances recognised at South Deep <sup>6</sup>	–	–	69.8
Deferred tax charge on change of tax rate at South Deep	–	–	(10.9)
Prior year adjustments	(0.2)	(1.0)	(3.0)
Other	(4.8)	4.0	(0.1)
<b>Total mining and income taxation</b>	<b>(432.5)</b>	<b>(175.6)</b>	<b>65.9</b>

<sup>1</sup> Deferred tax assets not recognised on reversal of impairment of investments relate to the reversal of impairment of FSE (2019 and 2018: impairment of FSE). Refer to note 7 for details of impairments.

<sup>2</sup> The functional currency of Cerro Corona is US Dollar, however, the Peruvian tax base is based on values in Peruvian Nuevo Sol.

<sup>3</sup> Deferred tax assets amounting to US\$0.1 million (2019: US\$3.3 million and 2018: US\$14.9 million) were not recognised during the year at Cerro Corona to the extent that there is insufficient future taxable income available. Deferred tax assets were not recognised during the year related to deductible temporary differences on additions to fixed assets in the current financial year that would only reverse after the end of the life-of-mine ("LoM") of Cerro Corona. In making this determination, the Group analysed, among others, forecasts of future earnings and the nature and timing of future deductions and benefits represented by deferred tax assets.

<sup>4</sup> At the Ghanaian operations, deferred tax assets of US\$50.9 million were not recognised during the year to the extent that there is insufficient future taxable income available. The US\$50.9 million comprised US\$41.0 million deferred tax assets relating to losses on financial instruments of US\$120.6 million (these losses are ring-fenced for tax purposes and there are no expected future gains on financial instruments to utilise against these losses) and US\$9.9 million relating to the Tarkwa expected credit loss provision of US\$29.0 million. (2018: Due to year-end assessments, deferred tax assets amounting to US\$6.5 million were recognised at Damang in 2018, to the extent that there was sufficient future taxable income available. The LoM indicated that the mine would make taxable profits in the future that would support the write back of a portion of the deferred tax asset amounting to US\$6.5 million in 2018. In making this determination, the Group analysed, among others, forecasts of future earnings and the nature and timing of future deductions and benefits represented by deferred tax assets.)

<sup>5</sup> Deferred tax assets of US\$12.8 million relating to assessed losses were recognised during the year at Salares Norte, to the extent that there was sufficient taxable income available in 2020 to offset against these losses. The taxable income in 2020 related mainly to gains on the Salares Norte foreign currency hedge.

<sup>6</sup> During 2014, the South African Revenue Services ("SARS") issued a Finalisation of Audit Letter ("the Audit Letter") stating that SARS had disallowed US\$182.2 million of GFJVH's gross recognised capital allowance of US\$925.5 million. On 30 May 2018, GFJVH and SARS entered into a confidential settlement agreement (as provided for in the Tax Administration Act) in full and final settlement of this matter. As a result of the settlement GFJVH recognised an additional US\$185.1 million of capital allowances with a tax effect on this amount of US\$53.7 million.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 10. MINING AND INCOME TAXATION (continued)

#### United States Dollar

	2020	2019	2018
<b>South Africa – current tax rates</b>			
Mining tax <sup>1</sup>	<b>Y = 34 – 170/X</b>	Y = 34 – 170/X	Y = 34 – 170/X
Non-mining tax <sup>2</sup>	<b>28.0%</b>	28.0%	28.0%
Company tax rate	<b>28.0%</b>	28.0%	28.0%
<b>International operations – current tax rates</b>			
Australia	<b>30.0%</b>	30.0%	30.0%
Ghana	<b>32.5%</b>	32.5%	32.5%
Peru	<b>29.5%</b>	29.5%	29.5%

<sup>1</sup> South African mining tax on mining income is determined according to a formula which takes into account the profit and revenue from mining operations. South African mining taxable income is determined after the deduction of all mining capital expenditure, with the proviso that this cannot result in an assessed loss. Capital expenditure amounts not deducted are carried forward as unredeemed capital expenditure to be deducted from future mining income. Accounting depreciation is ignored for the purpose of calculating South African mining taxation. The effective mining tax rate for Gold Fields Operations Limited (“GFO”) and GFI Joint Venture Holdings (Proprietary) Limited (“GFIJVH”), owners of the South Deep mine, has been calculated at 29% (2019: 29% and 2018: 29%).

In the formula above, Y is the percentage rate of tax payable and X is the ratio of mining profit, after the deduction of redeemable capital expenditure, to mining revenue expressed as a percentage.

<sup>2</sup> Non-mining income of South African mining operations consists primarily of interest income.

Deferred tax is provided at the expected future rate for mining operations arising from temporary differences between the carrying values and tax values of assets and liabilities.

At 31 December 2020, the Group had the following estimated amounts available for set-off against future income (pre-tax):

#### South African Rand

	2020			2019		
	Gross unredeemed capital expenditure Rand million	Gross tax losses Rand million	Gross tax losses not recognised Rand million	Gross unredeemed capital expenditure Rand million	Gross tax losses Rand million	Gross tax losses not recognised Rand million
<b>South Africa<sup>1</sup></b>						
Gold Fields Operations Limited	<b>9,927.8</b>	<b>2,213.8</b>	–	9,536.8	2,747.0	–
GFI Joint Venture Holdings Proprietary Limited	<b>14,251.0</b>	<b>768.0</b>	–	14,877.0	304.0	–
Gold Fields Holdings Company Limited	–	<b>19.8</b>	<b>19.8</b>	–	14.0	14.0

<sup>1</sup> These deductions are available to be utilised against income generated by the relevant tax entity and do not expire unless the tax entity concerned ceases to operate for a period of longer than one year. Under South African mining tax ring-fencing legislation, each tax entity is treated separately and as such these deductions can only be utilised by the tax entities in which the deductions have been generated. South African tax losses and unredeemed capital expenditure have no expiration date.

<sup>2</sup> The total tax losses of US\$231.2 million (2019: US\$125.7 million) comprise US\$3.8 million (2019: US\$8.8 million) tax losses that expire between one and two years, US\$1.9 million (2019: US\$15.2 million) tax losses that expire between two and five years, US\$2.6 million (2019: US\$16.5 million) tax losses that expire between five and 10 years, US\$180.4 million (2019: US\$33.0 million) tax losses that expire after 10 years and US\$42.5 million (2019: US\$52.2 million) tax losses that have no expiry date.

<sup>3</sup> The total tax losses of US\$205.8 million (2019: US\$212.0 million) have no expiry date.

<sup>4</sup> Tax losses may be carried forward for five years. These losses expire on a first-in-first-out basis. Tax losses of US\$nil (2019: US\$84.5 million) expire in two years, tax losses of US\$8.9 million (2019: US\$46.2 million) expire in three years, tax losses of US\$35.1 million (2019: US\$46.0 million) expire in four years and tax losses of US\$85.5 million (2019: US\$nil) expire in five years.

<sup>5</sup> Tax losses at Damang of US\$44.5 million comprise a deferred tax asset recognised for an assessed loss of US\$8.9 million and deferred tax assets not recognised relating to financial instruments losses of US\$35.6 million.

<sup>6</sup> Deferred tax assets at Tarkwa of US\$85.0 million not recognised relating to losses on financial instruments.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 13.1 LOAN ADVANCED – CONTRACTOR

Due to issues with fleet availability at both Tarkwa and Damang, an agreement was entered into between Gold Fields and Engineers and Planners (“E&P”) to provide financial assistance to E&P in order to procure new fleet. The loan amounts to US\$68.4 million, is repayable over a period commencing in February 2021 and ending in October 2023 and bears interest at a market related interest rate.

### 13.2 ASSETS HELD FOR SALE

Gold Fields served BCM Ghana Limited (the Company providing the contractor mining service to its Damang mine) a termination notice on 24 September 2019 and the contract was effectively terminated on 23 December 2019. As a result of the termination, the following obligations arose in terms of the early termination clauses in the contract:

- Purchase of mining fleet from the contractor at the higher of market value plus a 25% premium or the finance pay-out value plus a premium of 25%;
- Demobilisation costs;
- Early termination payment; and
- Purchase of stores inventory.

As part of the transition process to engage another contractor to continue mining, Damang obtained commitment from the new contractor to purchase the mining fleet from Damang at their market values in a back-to-back arrangement. As a result, the assets purchased from BCM as per the termination clauses of the contract have been recognised as held for sale in line with IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*.

The costs associated with the termination of the contract include:

		United States Dollar	
<i>Figures in millions unless otherwise stated</i>	Notes	2020	2019
<b>Amount recognised as assets held for sale:</b>			
Mining fleet <sup>1</sup>		29.4	31.2
		<b>29.4</b>	<b>31.2</b>
<b>Amount recognised in profit or loss:</b>			
Premium payable on mining fleet – 25% <sup>1</sup>		(0.5)	7.8
Demobilisation costs		(0.2)	1.3
Early termination payment (paid before 31 December 2019)		–	4.0
Non-mobile fleet		1.8	–
	8	<b>1.1</b>	<b>13.1</b>
<b>Amount recognised in trade and other payables:</b>			
Mining fleet		29.4	31.2
Premium payable on mining fleet – 25% <sup>1</sup>		7.3	7.8
Demobilisation costs		1.0	1.3
Non-mobile fleet		1.8	–
	27	<b>39.5</b>	<b>40.3</b>

<sup>1</sup> This is based on the market value of the fleet.

No amount has been recognised for the inventory as the value has not yet been determined.

The above termination of contract became the subject of a dispute between BCM and Gold Fields. The BCM dispute may result in protracted litigation. Gold Fields could incur significant costs as a result of such potential litigation. However, the alternative of leaving the matter unresolved, may be more costly. The dispute between Gold Fields and BCM is ongoing and the outcome of the dispute remains uncertain.

Despite the sale not being completed within one year, management has concluded that the classification as assets held for sale is still appropriate. This is as a result of the extension of the sale period due to factors out of management’s control and management remaining committed to the plan.

<sup>1</sup> The re-measurements relate mainly to leases at the Group's Australian operations that have variable payments linked to the Australian consumer price index ("CPI").

<sup>2</sup> General borrowing costs of US\$13.2 million (2019: US\$31.0 million) arising on Group general borrowings were capitalised during the period and comprised US\$12.1 million (2019: US\$20.0 million) borrowings costs related to the Damang reinvestment project, US\$nil (2019: US\$11.0 million) borrowings costs related to the Gruyere project and US\$1.1 million (2019: US\$nil) related to the Salares Norte project. An average interest capitalisation rate of 4.4% (2019: 6.2%) was applied. During 2020, capitalisation of borrowing costs ceased for the Damang reinvestment project and the Gruyere project due to both projects reaching commercial levels of production. In February 2020, the Salares Norte project was approved by the Board and capital expenditure commenced in April 2020, resulting in capitalisation of borrowing costs from that date.

<sup>3</sup> The write-off of exploration and evaluation assets is due to specific exploration programmes not yielding results to warrant further exploration at the Group's Australian operations and the US\$16.9 million (2019: US\$30.0 million) is included in the US\$49.7 million (2019: US\$84.4 million) "Exploration expense" in the consolidated income statement.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 15. ACQUISITION OF ASANKO GOLD

#### Background

On 29 March 2018, Gold Fields entered into certain definitive agreements (the "JV Transaction") with Galiano Gold Inc., previously named Asanko Gold Inc., ("Asanko") pursuant to which:

- Gold Fields and Asanko would each own a 45% interest in Asanko Gold Ghana Limited ("AGGL"), the former Asanko subsidiary that owns the Asanko Gold Mine, with the Government of Ghana continuing to retain a 10% free carried interest in AGGL (the Joint Arrangement).
- Gold Fields and Asanko would each own a 50% interest in Adansi Gold Company Limited ("Adansi"), the Asanko subsidiary that currently owns a number of exploration licences.
- Gold Fields and Asanko would each acquire a 50% interest in the newly formed financing entity (Shika Group Finance Limited).

On 20 June 2018, Gold Fields and Asanko received approval of the JV Transaction from the Ghanaian Minister of Lands and Natural Resources and the JV Transaction closed on 31 July 2018 once all conditions precedent were met.

#### Recognition and measurement

Gold Fields and Asanko have joint control and the Asanko operation is structured as a separate vehicle and the Group has a residual interest in the net assets of Asanko. Accordingly, the Group has classified its interest in Asanko as a joint venture.

#### Fair value measured

There were no changes in 2019 to the provisional purchase price allocation performed at the time of acquisition of Asanko, therefore the purchase price allocation is considered final.

#### Consideration transferred

The following table summarises the acquisition date fair value of the consideration transferred:

	United States Dollar
<i>Figures in millions unless otherwise stated</i>	2018
Cash – Asanko redeemable preference shares and equity	165.0
<b>Total consideration transferred</b>	<b>165.0</b>

An additional US\$20 million was invested in the redeemable preference shares in 2019. Refer to note 17 for further details.

#### Gain on acquisition of Asanko

The gain on acquisition was determined as follows:

	United States Dollar
<i>Figures in millions unless otherwise stated</i>	2018
Total fair value of assets acquired	216.8
Redeemable preference share equity financial asset acquired <sup>1</sup>	129.9
Fair value of identifiable net assets acquired <sup>2</sup>	86.9
Consideration transferred	(165.0)
<b>Gain on acquisition<sup>3</sup></b>	<b>51.8</b>

<sup>1</sup> The redeemable preference shares have the following conditions:

- Redeemable at the option of the issuer at par value.
- Non-interest-bearing.

The redeemable preference shares were recognised as an investment in an equity financial instrument measured at fair value through other comprehensive income. The key assumptions used to determine the fair value of the redeemable preference shares of US\$129.9 million at acquisition were as follows:

Par value of the preference shares	US\$165.0 million
Market-related interest rate	7.85%
Expected redemption period – 2020 to 2023	5 years

<sup>2</sup> The key assumptions used to determine the fair value of the net identifiable assets acquired were as follows:

US\$ gold price – 2018 to 2019	US\$1,200/oz
US\$ gold price – 2020 onwards	US\$1,300/oz
Discount rate	10.27%
Life-of-mine – 2019 to 2030	12 years

<sup>3</sup> The excess of the fair value of the identifiable net assets acquired over the consideration is recognised immediately in profit or loss as a gain on acquisition. The injection of capital into Asanko Gold Mine for an equity stake represented a favourable deal for Gold Fields, as Asanko needed to refinance the debt of Asanko Gold Mine, resulting in a gain on acquisition.

<sup>1</sup> *Maverix was derecognised as an associate on 9 May 2019.*

**(a) FSE**

Gold Fields interest in FSE, an unlisted entity incorporated in the Philippines, was 40% (2019: 40% and 2018: 40%) at 31 December 2020. Lepanto Consolidated Mining Company owns the remaining 60% shareholding in FSE.

A remaining 20% option is not currently exercisable until such time as FSE obtains a Foreign Technical Assistance Agreement ("FTAA") which allows for direct majority foreign ownership and control.

FSE has a 31 December year-end and has been equity accounted since 1 April 2012. FSE's equity accounting is based on results to 31 December 2020.

Investment in joint venture consists of:

<i>Figures in millions unless otherwise stated</i>		2020	2019
Unlisted shares at cost		<b>230.0</b>	230.0
Equity contribution		<b>95.2</b>	93.6
Cumulative impairment <sup>1</sup>		<b>(85.6)</b>	(147.9)
Share of accumulated losses brought forward		<b>(93.6)</b>	(92.2)
Share of loss after taxation <sup>2</sup>		<b>(1.6)</b>	(1.4)
<b>Total investment in joint venture<sup>3</sup></b>		<b>144.4</b>	82.1

<sup>1</sup> *Refer to note 7 for details of impairment.*

<sup>2</sup> *Gold Fields' share of loss after taxation represents exploration and other costs, including work completed on a scoping study, which is fully funded by Gold Fields as part of their equity contribution.*

<sup>3</sup> *FSE has no revenues or significant assets or liabilities. Assets included in FSE represent the rights to explore and eventually mine the FSE project.*

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 16.1 EQUITY-ACCOUNTED INVESTEEES (continued)

#### (b) Asanko Gold

The Asanko Gold joint venture entities comprise the following:

- A 45% interest in Asanko Gold Ghana Limited ("AGGL"), incorporated in Ghana, which owns the Asanko Gold Mine. The Government of Ghana continues to retain a 10% free carried interest in AGGL;
- A 50% interest in Adansi Gold Company Limited ("Adansi"), incorporated in Ghana; and
- A 50% interest in Shika Group Finance Limited ("Shika"), incorporated in the Isle of Man.

Refer to note 15 for further information on the acquisition of this investment.

Gold Fields and Asanko have joint control and the Asanko operation is structured as a separate vehicle and the Group has a residual interest in the net assets of Asanko. Accordingly, the Group has classified its interest in Asanko as a joint venture.

Asanko has a 31 December year-end and has been equity accounted since 31 July 2018. Asanko's equity accounting is based on results to 31 December 2020.

The following table summarises the financial information and the carrying amount of the Group's interest in Asanko:

	<b>United States Dollar</b>	
<i>Figures in millions unless otherwise stated</i>	<b>2020</b>	2019
Investment in joint venture at cost consists of:		
Initial investment at cost	<b>86.9</b>	86.9
Share of accumulated profit/(losses) brought forward	<b>3.0</b>	(1.1)
Share of profit after taxation before impairment	<b>48.5</b>	4.1
Impairment <sup>3</sup>	<b>(49.5)</b>	–
<b>Carrying value at 31 December</b>	<b>88.9</b>	89.9

The Group's interest in the summarised financial statements of Asanko on a combined basis after fair value adjustments as determined at acquisition is as follows:

	<b>United States Dollar</b>	
<i>Figures in millions unless otherwise stated</i>	<b>2020</b>	2019
<b>Statement of financial position – Asanko</b>		
Non-current assets <sup>1</sup>	<b>392.9</b>	474.6
Current assets <sup>2</sup>	<b>170.6</b>	120.0
Non-current liabilities	<b>(71.8)</b>	(79.4)
Current liabilities	<b>(109.7)</b>	(62.2)

Share of accumulated losses brought forward	<b>3.0</b>	(1.1)
Share of profit after taxation before impairment	<b>48.5</b>	4.1
Impairment <sup>3</sup>	<b>(49.5)</b>	–
<b>Carrying amount of interest in joint venture</b>	<b>88.9</b>	89.9

<sup>1</sup> Includes impact of fair value adjustment, amounting to US\$39.6 million, to property, plant and equipment of the Asanko Gold mine as determined at acquisition and impairment as discussed below.

<sup>2</sup> Current assets includes cash and cash equivalents amounting of US\$64.3 million (2019: US\$43.7 million).

<sup>3</sup> Following the identification of an impairment trigger during 2020, an impairment of US\$49.5 million of the Asanko Gold Mine was recognised. Due to the re-evaluation of the geological modelling by our JV partner, Galiano, Gold Fields is not in a position to provide a reserve and resource estimate for Asanko as at 31 December 2020. Taking this into consideration, management has modelled various scenarios for the Asanko Life of Mine ("LoM") in order to determine their best estimates of the future cash flows of the Asanko gold mine. The various LoM scenario runs were undertaken in an attempt to model Asanko's future cash flows in the absence of a revised Resource and Reserve at 31 December 2020. These scenarios are based on the pre-feasibility study completed in 2019, in order to declare a Reserve at 31 December 2019, but were modified where appropriate to reflect prevailing circumstances.

<sup>2</sup> Current assets includes cash and cash equivalents amounting of US\$64.3 million (2019: US\$43.7 million).

<sup>3</sup> Following the identification of an impairment trigger during 2020, an impairment of US\$49.5 million of the Asanko Gold Mine was recognised. Due to the re-evaluation of the geological modelling by our JV partner, Galiano, Gold Fields is not in a position to provide a Reserve and Resource estimate for Asanko as at 31 December 2020. Taking this into consideration, management has modelled various scenarios for the Asanko Life of Mine (“LoM”) in order to determine their best estimates of the future cash flows of the Asanko gold mine. The various LoM scenario runs were undertaken in an attempt to model Asanko’s future cash flows in the absence of a revised Reserve and Resource at 31 December 2020. These scenarios are based on the pre-feasibility study completed in 2019, in order to declare a Reserve at 31 December 2019, but were modified where appropriate to reflect prevailing circumstances.

**(c) Maverix Metals Incorporated (“Maverix”)**

Gold Fields’ interest in Maverix, listed on the Toronto Stock Exchange, was nil% at 31 December 2020 and 2019.

On 23 December 2016, Gold Fields sold a portfolio of 11 producing and non-producing royalties to Maverix in exchange for 42.85 million common shares and 10.0 million common share purchase warrants of Maverix, realising a profit on disposal of US\$48.0 million.

In 2018, Maverix purchased a portfolio of royalties from Newmont (the “Transaction”). As part of the consideration for the Transaction, Maverix issued Newmont 60,000,000 common shares and 10,000,000 common share purchase warrants. The Transaction resulted in the dilution of Gold Fields’ interest in Maverix from 28% to 20% at 31 December 2018. The Transaction resulted in Gold Fields recognising a profit on the deemed disposal of its interest in Maverix of US\$4.0 million.

In line with its key strategic objective of paying down its debt, Gold Fields Limited sold its shareholding in Maverix during the year ended 31 December 2019. The sale of the shares, processed through a series of private market transactions, raised US\$66.8 million in cash. After the first transaction, Maverix no longer met the definition of an associate and it was reclassified as a listed investment and a profit on disposal of US\$14.6 million was recognised comprising a profit on disposal of associate of US\$33.8 million, partially offset by a loss on derecognition of the investment in Maverix designated at fair value through profit or loss of US\$19.2 million.

Gold Fields retained 4,125,000 Maverix warrants, equivalent to a 3.68% interest in the company on a partially diluted basis. The warrants are classified as derivative instruments and are included in investments (refer note 17).

Maverix has a 31 December year-end and was equity-accounted since 23 December 2016. Equity accounting for Maverix was based on the published results to 9 May 2019, being the date on which Maverix was derecognised as an associate.

		United States Dollar	
<i>Figures in millions unless otherwise stated</i>		2020	2019
	Listed shares at cost	–	42.1
	Profit on dilution of Gold Fields’ interest in Maverix	–	4.0
	Transaction costs capitalised	–	0.3
	Share of accumulated profits brought forward	–	1.2
	Share of profit after taxation	–	0.4
	Derecognition of associate	–	(48.0)
	<b>Investment in associate – Maverix</b>	<b>–</b>	<b>–</b>
(d)	<b>Other</b>		
	<b>Investment in associate</b>	<b>–</b>	<b>–</b>
	Rusoro Mining Limited (“Rusoro”) <sup>1</sup>	–	–

<sup>1</sup> Represents a holding of 25.7% (2019: 25.7%) in Rusoro.

The carrying value of Rusoro was written down to US\$nil at 31 December 2010 due to losses incurred by the entity. The fair value, based on the quoted market price of the investment, in Rusoro at 31 December 2020 is US\$4.4 million (2019: US\$6.5 million). The unrecognised share of loss of Rusoro for the year amounted to US\$5.0 million (2019: unrecognised shares of loss of US\$4.2 million). The cumulative unrecognised share of losses of Rusoro at 31 December 2020 amounted to US\$207.8 million (2019: US\$202.8 million).

On 22 August 2016, the Arbitration Tribunal, operating under the Additional Facility Rules of the World Bank’s International Centre for the Settlement of Investment Disputes, awarded Rusoro damages of US\$967.8 million plus pre- and post-award interest which currently equates to in excess of US\$1.2 billion in the arbitration brought by Rusoro against the Bolivarian Republic of Venezuela (“Venezuela”).

Venezuela has not complied with the arbitration award terms, which were issued on 22 August 2016. On 6 December 2017, Rusoro obtained a judgment against Venezuela in the Superior Court of Justice in Ontario, Canada, in excess of US\$1.3 billion. The judgment, which was issued on default as a result of Venezuela’s failure to appear before the Ontario court, arose out of Rusoro’s ongoing dispute with Venezuela over the South American nation’s seizure of its gold mining properties in the country. The Canadian judgment, which confirmed an arbitration award issued in Rusoro’s favour in the same amount, was issued on 25 April 2017. Venezuela did not appeal or seek to vacate the judgment, and its time to do so expired.

Rusoro further filed a suit in the Supreme Court of the State of New York, seeking recognition of the Canadian judgment. Rusoro brought the New York lawsuit in addition to an action it filed in the U.S. District Court for the District of Columbia, which seeks recognition of and the entry of judgment on the original arbitration award. A favourable ruling from either the New York or D.C. court will entitle Rusoro to use all legal procedures – including broad discovery from both Venezuela and third parties – that U.S. law provides judgment creditors. Any judgment issued in New York will also accrue interest at 9% per annum until the judgment is fully paid. On 19 October 2018, Rusoro announced that it had reached a settlement agreement with Venezuela by which the Venezuela government agreed to pay Rusoro US\$1.28 billion to acquire the company’s mining data and full release of the judgment issued in favour of the company. In a decision dated 29 January 2019, the Paris Court of Appeals partially annulled the arbitral award issued in favour of the Company in August 2016. Rusoro continues to vigorously pursue all available remedies to reinstate such award.

Management have not recognised this amount due to the uncertainty over its recoverability.

## 16.2 INTEREST IN JOINT OPERATION

On 13 December 2016, Gold Fields purchased 50% of the Gruyere Gold Project and entered into a 50:50 unincorporated joint operation with Gold Road Resources Limited ("Gold Road") for the development and operation of the Gruyere Gold Project in Western Australia, which comprises the Gruyere gold deposit as well as additional resources including Central Bore and Attila/Alaric.

Gold Fields acquired 50% interest in the Gruyere Gold Project for a total purchase consideration of A\$350.0 million payable in cash and a 1.5% royalty on Gold Fields' share of production after total mine production exceeds 2 million ounces. The cash consideration is split with A\$250.0 million payable on the effective date and A\$100.0 million payable according to an agreed construction cash call schedule. Transaction costs of A\$18.5 million (US\$13.3 million) were incurred. Of the A\$100.0 million payable, A\$7.0 million was paid in 2016, A\$78.0 million in 2017 and A\$15.0 million in 2018.

The Gruyere project was successfully completed during 2019, with first gold produced in June 2019. Commercial levels of production were achieved at the end of September 2019.

Below is a summary of Gold Fields' share of the joint operation and includes inter-company transactions and balances:

	2020		2019

Interest earned	0.7	0.7
Translation adjustment	0.4	0.9
<b>Balance at end of the year<sup>4</sup></b>	<b>79.3</b>	<b>69.5</b>

<sup>1</sup> The listed investments comprise mainly investments in Galiano Gold Inc. (formerly Asanko Gold Inc.) of US\$24.7 million (2019: US\$21.2 million), Cardinal Resources Limited of US\$nil (2019: US\$17.1 million), Magmatic Resources Limited of US\$2.5 million (2019: US\$3.0 million), Chakana Copper Corp of US\$7.4 million (2019: US\$3.0 million) and Lefroy Exploration Limited of US\$3.8 million (2019: US\$2.4 million). Refer note 42 for further details of listed investments. The decrease in value of the listed investments was mainly due to the disposal of Cardinal Resources Limited.

<sup>2</sup> Consists of 137,439,999 (2019: 174,939,999) redeemable preference shares at par value for US\$137,439,999 (2019: US\$174,939,999).

The following table shows a reconciliation from the fair value at the beginning of the year to the fair value of the redeemable preference shares at the end of the year (level 3 financial instrument):

	2020	2019
Fair value at beginning of the year	95.5	132.9
Purchase of preference shares	–	20.0
Redemption of preference shares	(37.5)	(10.0)
Net change in fair value (recognised in OCI)	34.6	(47.4)
Fair value at end of the year	92.6	95.5

The fair value is based on the expected cash flows of the Asanko Gold Mine and this resulted in an upward fair value adjustment through other comprehensive income of US\$34.6 million (2019: downward adjustment of US\$47.4 million) in 2020, due to the change in the timing of the expected cash flows.

The key inputs used in the valuation of the fair value are the discount rate of 8.4% (2019: 8.5%) and the timing of the cash flows.

Any reasonable change in the timing of the cash flows or market related discount rate could materially change the fair value of the redeemable preference shares (refer to note 38 for sensitivity analysis performed).

Refer to notes 15 and 16.1 (b) for further details.

<sup>3</sup> Consists of 4.125 million (2019: 4.125 million) common share purchase warrants of Maverix. Refer to note 16.1 (c) for further details.

<sup>4</sup> The trust funds consist of term deposits amounting to US\$17.6 million (2019: US\$16.8 million) in South Africa, as well as secured cash deposits amounting to US\$61.7 million (2019: US\$52.7 million) in Ghana.

These funds are intended to fund environmental rehabilitation obligations of the Group's South African and Ghanaian mines and are not available for general purposes of the Group. All income earned in these funds is re-invested or spent to meet these obligations. The funds are invested in money market and fixed deposits. The obligations which these funds are intended to fund are included in environmental rehabilitation costs under non-current provisions (refer to note 25.1). Refer to note 34 for details on environmental obligation guarantees.

<b>Authorised</b>	<b>2,000,000,000</b>	<b>2,000,000,000</b>

<sup>1</sup> On 12 February 2020 Gold Fields successfully completed the placing of 41,431,635 new ordinary, no par value shares with existing and new institutional investors at a price of ZAR 90.20 per share. The placing issued represented, in aggregate, approximately 5% of the Company's issued ordinary share capital prior to the placing. Gross proceeds of approximately R3.7 billion (US\$249.0 million) were raised through the placing.

### Authorised and issued

Holders of shares are entitled to dividends as declared from time to time and are entitled to one vote per share at general meetings of the Company.

In terms of the general authority granted by shareholders at the AGM on 20 August 2020, the authorised but unissued ordinary stated capital of the Company representing not more than 5% of the issued stated capital of the Company from time to time at that date, after setting aside so many ordinary shares as may be required to be allotted and issued pursuant to the share incentive schemes, was placed under the control of the Directors. This authority expires at the next Annual General Meeting where shareholders will be asked to place under the control of the Directors the authorised but unissued ordinary stated capital of the Company representing not more than 5% of the issued stated capital of the Company from time to time.

In terms of the JSE Listings Requirements, shareholders may, subject to certain conditions, authorise the Directors to issue the shares held under their control for cash, other than by means of a rights offer, to shareholders. In order that the Directors of the Company may be placed in a position to take advantage of favourable circumstances which may arise for the issue of such shares for cash, without restriction, for the benefit of the Company, shareholders will be asked to consider a special ordinary resolution to this effect at the forthcoming AGM.

### Repurchase of shares

The Company has not exercised the general authority granted to buy back shares from its issued ordinary stated capital granted at the AGM held on 20 August 2020. Currently, the number of ordinary shares that may be bought back in any one financial year may not exceed 20% of the issued ordinary share capital as of 20 August 2020. At the next AGM, shareholders will be asked to renew the general authority for the acquisition by the Company, or a subsidiary of the Company, of its own shares.

### Beneficial shareholding

The following beneficial shareholders hold 5% or more of the Company's listed ordinary shares at 31 December 2020:

	Number of shares	% of issued ordinary shares
Government Employees Pension Fund	82,103,978	9.29%
Van Eck Vectors Gold Miners ETF	52,019,222	5.89%

## 23. DEFERRED TAXATION

<sup>1</sup> Tax losses and unredeemed capital expenditure have been recognised, as disclosed in note 10, to the extent that the tax paying entities will have taxable profits in the foreseeable future (per the life-of-mine models of the respective operations) in order to utilise the unused tax losses and unredeemed capital expenditure before they expire. This was particularly assessed with reference to the South Deep and Damang life-of-mine models.

R500 million Absa Bank revolving credit facility <sup>10</sup>	(k)	-	-	GFIJVH/GFO	JIBAR plus 2.20%	0.77%	15 April 2023
Short-term Rand uncommitted credit facilities <sup>11</sup>	(l)	-	-	-	-	-	-
<b>Total borrowings</b>		<b>1,526.9</b>	<b>1,845.8</b>				
<b>Current borrowings</b>		<b>(83.5)</b>	<b>(684.9)</b>				
<b>Non-current borrowings</b>		<b>1,443.4</b>	<b>1,160.9</b>				

<sup>1</sup> The 2020 notes was unconditionally and irrevocably guaranteed by Gold Fields Limited ("Gold Fields"), Gold Fields Operations Limited ("GFO") and Gold Fields Holdings Company (BVI) Limited ("GF Holdings") (collectively "the Guarantors"), on a joint and several basis.

During 2016, Gold Fields Australasia (BVI) Limited ("GFA") offered and accepted the purchase of an aggregate principal amount of notes equal to US\$147.6 million at the purchase price of US\$880 per US\$1,000 in principal amount of notes. GFA held the notes until their maturity on 7 October 2020. The Group recognised a profit of US\$17.7 million in 2016 on the buy back of the 2020 notes.

On 27 May 2019, Gold Fields announced the successful buy back of \$250 million of the outstanding 2020 notes at 102% of par as compared with a premium of 101.73% of par at the close of business on 24 May 2019. The buy-back of the notes was financed with the proceeds of the raising of two new bonds, the 5-year notes and the 10-year notes. The Group recognised a loss of US\$5.0 million in 2019 on the buy-back of the 2020 notes.

On 7 October 2020, the 2020 notes matured and the outstanding balance was repaid.

<sup>2</sup> On 9 May 2019, Gold Fields successfully concluded the raising of two new bonds, a US\$500 million 5-year notes issue with a coupon of 5.125% and a US\$500 million 10-year notes issue with a coupon of 6.125%, raising a total of US\$1 billion at an average coupon of 5.625%. The proceeds of the raising were used to repay amounts outstanding under the US\$1,290 million term loan and revolving credit facilities and to repurchase of a portion of the 2020 notes.

The balances of the five-year notes and the 10-year notes are net of unamortised transaction costs amounting to US\$3.0 million (2019: US\$3.7 million) and US\$3.6 million (2019: US\$3.9 million), respectively.

The payments of all amounts due in respect of the 5-year and 10-year notes are unconditionally and irrevocably guaranteed by Gold Fields Limited ("Gold Fields"), Gold Fields Ghana Holdings (BVI) Limited ("GF Ghana") and Gold Fields Holdings Company (BVI) Limited ("GF Holdings") (collectively "the Guarantors"), on a joint and several basis.

<sup>3</sup> Borrowings under the revolving senior secured credit facility are secured by first-ranking assignments of all rights, title and interest in all of La Cima's concentrate sale agreements. In addition, the offshore and onshore collection accounts of La Cima are subject to an account control agreement and a first-ranking charge in favour of the lenders. This facility is non-recourse to the rest of the Group.

On 21 July 2020, La Cima and the Facility Agent entered into an Amendment Agreement to extend the termination date of the facility agreement by one year to 19 September 2021.

<sup>4</sup> Borrowings under the facility are guaranteed by Gold Fields Ghana Limited ("GF Ghana Limited") and Abosso Goldfields Limited ("Abosso"). This facility is non-recourse to the rest of the Group.

<sup>5</sup> On 19 November 2020, Gruyere Holdings Proprietary Limited entered into a new A\$500 million syndicated revolving credit facility. On 23 November 2020, the old A\$500 million syndicated revolving credit facility was refinanced with the new A\$500 million syndicated revolving credit facility and cancelled.

Borrowings under the original facility were guaranteed by Gold Fields, GF Holdings, Orogen, GFO, GFIJVH and GF Ghana.

Borrowings under the facility are guaranteed by Gold Fields, GF Holdings, Orogen and GF Ghana.

<sup>6</sup> On 25 July 2019, the US\$1,290 million term loan and revolving credit facilities were refinanced with the new US\$1,200 million revolving credit facilities and cancelled.

Borrowings under this facility were guaranteed by Gold Fields, GF Holdings, Orogen, GFO, GFIJVH and GF Ghana.

<sup>7</sup> On 25 July 2019, Gold Fields Orogen Holding (BVI) Limited and Gold Fields Ghana Holdings (BVI) Limited entered into a US\$1,200 million revolving credit facilities agreement which became effective on the same day, with a syndicate of international banks and financial institutions. The new facilities comprise two tranches, a US\$600 million 3 year revolving credit facility (with an option to extend to up to 2 years subject to lender consent) and a US\$600 million 5 year revolving credit facility (with an option to extend to up to 2 years subject to lender consent). The purpose of the new facilities is to refinance the US\$1,290 million term loan and revolving credit facilities, to repay the 2020 notes and to fund general corporate and working capital requirements of the Gold Fields Group.

In July 2020, US\$870 million of the US\$1,200 million revolving credit facilities were extended by one year. The facilities will run as follows:

- Facility A: US\$600 million up to 25 July 2022 then US\$435 million from 26 July 2022 to 25 July 2023;

- Facility B: US\$600 million up to 25 July 2024 then US\$435 million from 26 July 2024 to 25 July 2025.

Borrowings under this facility are guaranteed by Gold Fields, GF Holdings, Orogen, GF Ghana and Gruyere Holdings Proprietary Limited ("Gruyere")

<sup>8</sup> Borrowings under this facility are guaranteed by Gold Fields, GFO, GF Holdings, Orogen, GFIJVH, GF Ghana and Gruyere.

<sup>9</sup> On 15 April 2020, GFIJVH and GFO entered into a new R500 million Rand Merchant Bank revolving credit facility. The old facility matured on 31 March 2020.

Borrowings under the new facility are guaranteed by Gold Fields, GFO, GF Holdings, Orogen, GFIJVH and GF Ghana.

<sup>10</sup> On 15 April 2020, GFIJVH and GFO entered into a new R500 million ABSA Bank revolving credit facility. The old facility matured on 31 March 2020.

Borrowings under the new facility are guaranteed by Gold Fields, GFO, GF Holdings, Orogen, GFIJVH and GF Ghana.

<sup>11</sup> During 2019 the Group utilised uncommitted loan facilities from some of the major banks to fund the capital expenditure and working capital requirements of the South African operation. These facilities have no fixed terms, are short-term in nature and interest rates are market related. Borrowings under these facilities are guaranteed by Gold Fields.

<b>25. PROVISIONS</b>			
25.1	Environmental rehabilitation costs	<b>381.5</b>	370.3
25.2	Silicosis settlement costs	<b>18.3</b>	21.2
	Other	<b>3.1</b>	4.2
	<b>Total provisions</b>	<b>402.9</b>	395.7
	Current portion of provisions	<b>(23.6)</b>	(4.6)
	<b>Non-current portion of provisions</b>	<b>379.3</b>	391.1
<b>25.1 Environmental rehabilitation costs</b>			
	Balance at beginning of the year	<b>370.3</b>	289.6
	Changes in estimates <sup>1</sup>	<b>(5.1)</b>	79.5
	Interest expense	<b>10.7</b>	11.7
	Payments	<b>(12.9)</b>	(10.7)
	Translation adjustment	<b>18.5</b>	0.2
	<b>Balance at end of the year<sup>2</sup></b>	<b>381.5</b>	370.3
	Current portion of environmental rehabilitation costs	<b>(19.6)</b>	–
	<b>Non-current portion of environmental rehabilitation costs</b>	<b>361.9</b>	370.3
	The provision is calculated using the following gross closure cost estimates:		
	South Africa	<b>43.9</b>	45.9
	Ghana	<b>104.4</b>	105.6
	Australia	<b>218.8</b>	198.2
	Peru	<b>97.4</b>	86.2
	Chile	<b>2.1</b>	0.4
	<b>Total gross closure cost estimates</b>	<b>466.6</b>	436.3

The provision is calculated using the following assumptions:	Inflation rate	Discount rate
<b>2020</b>		
South Africa	<b>4.8%</b>	<b>10.8%</b>
Ghana	<b>2.2%</b>	<b>6.7% – 7.2%</b>
Australia	<b>2.5%</b>	<b>2.5%</b>
Peru	<b>2.2%</b>	<b>2.2%</b>
Chile	<b>2.2%</b>	<b>2.2%</b>
<b>2019</b>		
South Africa	5.4%	10.3%
Ghana	2.5%	7.7% – 7.9%
Australia	2.5%	1.2% – 1.6%
Peru	2.5%	3.0%
Chile	2.5%	2.6%

<sup>1</sup> Changes in estimates are defined as changes in reserves and corresponding changes in life of mine as well as changes in laws and regulations governing environmental matters, closure cost estimates and discount rates.

<sup>2</sup> South African, Ghanaian, Australian and Peruvian mining companies are required by law to undertake rehabilitation as part of their ongoing operations. These environmental rehabilitation costs are funded as follows:

- Ghana – reclamation bonds underwritten by banks and restricted cash (refer to note 18);
- South Africa – contributions into environmental trust funds (refer to note 18) and guarantees (refer to note 34);
- Australia – mine rehabilitation fund levy; and
- Peru – bank guarantees (refer to note 34).

<b>Non-current portion of long-term incentive plan</b>		<b>33.4</b>	11.5

<sup>1</sup> The principal health risks associated with Gold Fields' mining operations in South Africa arise from occupational exposure to silica dust, noise, heat and certain hazardous chemicals. The most significant occupational diseases affecting Gold Fields' workforce include lung diseases (such as silicosis, tuberculosis, a combination of the two and chronic obstructive airways disease ("COAD") as well as noise induced hearing loss ("NIHL")).

A consolidated application was brought against several South African mining companies, including Gold Fields, for certification of a class action on behalf of current or former mineworkers (and their dependants) who have allegedly contracted silicosis and/or tuberculosis while working for one or more of the mining companies listed in the application.

This matter was previously disclosed as a contingent liability as the amount could not be estimated reliably. As a result of the ongoing work of the Gold Working Group (comprising African Rainbow Minerals, Anglo American SA, AngloGold Ashanti, Gold Fields, Harmony and Sibanye-Stillwater) (the "GWG Parties") and engagements with affected stakeholders since 31 December 2016, Gold Fields was able to reliably estimate its share in the estimated cost in relation to the GWG Parties of a possible settlement of the class action claims and related costs during 2017. As a result, Gold Fields provided an amount of US\$18.3 million (R268.6 million) (2019: US\$21.2 million (R297.1 million)) for this obligation in the statement of financial position at 31 December 2020. The nominal amount of this provision is US\$23.1 million (R339.3 million). Gold Fields believes that this remains a reasonable estimate of its share of the settlement of the class action claims and related costs.

The assumptions that were made in the determination of the provision include silicosis prevalence rates, estimated settlement per claimant, benefit take-up rates and disease progression rates. A discount rate of 6.67% (2019: 10.08%) was used, based on government bonds with similar terms to the anticipated settlements.

Refer to note 35 for further details.

<sup>2</sup> Senior and middle management receive awards under the LTIP. The performance conditions of the LTIP are approved annually by the Remuneration Committee. For the 2018, 2019 and 2020 allocations, regional performance conditions are based on regional specific targets and performance conditions for corporate employees are based on the same conditions as the share-based payments plan, refer note 5. The expected timing of the cash outflows in respect of each grant is at the end of three years after the original award was made.

– within one year	<b>64.2</b>	45.2
– later than one and not later than five years	<b>157.2</b>	123.0
– later than five years	<b>207.6</b>	164.7
<b>Total</b>	<b>429.0</b>	332.9

<sup>1</sup> The additions in 2020 relate mainly to additional assets in terms of the power purchase agreements at Tarkwa, Agnew and Granny Smith (2019: Gas fired power plant and solar farm portion of the power purchase agreement at Agnew).

<sup>2</sup> The remeasurements in 2020 and 2019 relate mainly to leases at the Group's Australian operations that have variable payments linked to the Australian consumer price index ("CPI").

<sup>3</sup> The Group applied IFRS 16 Leases from 1 January 2019 using the modified retrospective approach. Accordingly, the comparative information presented for 2018 was not restated.

On transition to IFRS 16, the Group elected to recognise the right-of-use assets at an amount equal to the lease liability at 1 January 2019 and applied the following practical expedients:

- Relying on previous assessments on whether leases are onerous as an alternative to performing an impairment review. There were no onerous contracts as at 1 January 2019; and
- Accounting for operating leases with a remaining lease term of less than 12 months as at 1 January 2019 as short-term leases.

On transition to IFRS 16, the Group recognised additional right-of-use assets and lease liabilities amounting to US\$209.6 million.

### Guarantees

The Group provides environmental obligation guarantees and other guarantees with respect to its South African, Peruvian, Ghanaian and Australian operations. These guarantees amounted to US\$191.8 million at 31 December 2020 (2019: US\$154.3 million) (refer note 25.1).

<sup>1</sup> Contracted for capital expenditure of US\$514.7 million in 2020 includes US\$454.0 million for Salares Norte. Gold Fields has completed a feasibility study on the Salares Norte deposit in Chile and the final notice to proceed ("FNTP") was provided by the Board in February 2020 and construction commenced in April 2020.

<sup>2</sup> Leases amounting to US\$33.4 million were entered into during 2019 but the use of the assets has not yet commenced at 31 December 2019. These relates mainly to wind farm and battery storage portion of the power purchase agreement at Agnew.

<sup>3</sup> The undiscounted lease liabilities relate to the gross cashflows used to determine the lease liabilities in terms of IFRS 16 Leases and will not agree to the leases recognised in note 33.

<sup>4</sup> The non-lease elements are the amounts in the lease contracts that are not accounted for as part of the lease liabilities.

<sup>5</sup> These are the total commitments per lease contracts where the payments have been determined to be fully variable, as a result no lease liability has been recorded. Included in these amounts are payment for non-lease elements of the arrangement.

## 35. CONTINGENT LIABILITIES

### Randgold and Exploration summons

On 21 August 2008, Gold Fields Operations Limited, or GFO, formerly known as Western Areas Limited, a subsidiary of Gold Fields, received a summons from Randgold and Exploration Company Limited, or R&E, and African Strategic Investment (Holdings) Limited. The summons claims that during the period that GFO was under the control of Brett Kebble, Roger Kebble and others, GFO assisted in the unlawful disposal of shares owned by R&E in Randgold Resources Limited, or Resources, and Afrikander Lease Limited, now Uranium One.

The claims have been computed in various ways. The highest claims have been computed on the basis of the highest prices of Resources and Uranium One shares between the dates of the alleged thefts and May 2017 (approximately R43.7 billion). The alternative claims are computed based on the value of the shares as at the date of judgment (which is not yet calculable), plus dividend amounts that would have been received and based on the market value of the shares at the time they were allegedly misappropriated, plus dividends that would have been received (cumulatively equating to approximately R26.9 billion).

Simultaneously with delivering its plea, GFO joined certain third parties to the action (namely JCI Limited, JC Lamprecht, RAR Kebble and the deceased and insolvent estate of BK Kebble), in order to enable it to claim compensation against such third parties in the event that the plaintiffs are successful in one or more of their claims. In addition, notices in terms of section 2(2)(b) of the Apportionment of Damages Act, 1956 were served on various parties by GFO, in order to enable it to make a claim for a contribution against such parties in terms of the Apportionment of Damages Act, should the plaintiffs be successful in one or more of its claims.

The matter has been allocated to the commercial court of the Gauteng Local Division, Johannesburg, as a result of which it will be case managed by the Judge assigned to the matter, in order to ensure that it progresses expeditiously to trial.

GFO's assessment is that it has sustainable defences to these claims and, accordingly, GFO's attorneys have been instructed to vigorously defend the claims.

The ultimate outcome of the claims cannot presently be determined and, accordingly, no adjustment for any effects on the Group that may result from these claims, if any, has been made in the consolidated financial statements.

### Silicosis

#### Class action

The Settlement Agreement in the silicosis and tuberculosis class action litigation has become operational on 10 December 2019. A settlement trust, known as the Tshiamiso Trust, has been established to carry out the terms of the Settlement Agreement and is responsible for ensuring that all eligible current and former mineworkers across southern Africa with silicosis or work-related TB (or their dependants where the mineworker has passed away) are compensated. The board of trustees is chaired by Professor May Hermanus as an independent trustee.

Over the course of 2020, the Tshiamiso Trust worked to create the capacity and establish the systems to begin to deliver on its mandate. However, the Covid-19 pandemic has had a significant impact on the work of the Trust. During October 2020, the Trust identified a test group of potential claimants. On 3 December 2020, the Trust made its first payments to six of these claimants. Each recipient received R250 000.

#### Financial provision

Gold Fields has provided for the estimated cost of the class action settlement based on actuarial assessments and the provisions of the Settlement Agreement. At 31 December 2020, the provision for Gold Fields' share of the settlement of the class action claims and related costs amounts to US\$18.3 million (R268.6 million) (2019: US\$21.2 million (R297.1 million)). The nominal value of this provision is US\$23.1 million (R339.3 million).

The ultimate outcome of this matter however remains uncertain, with the number of eligible workers successfully submitting claims and receiving compensation being uncertain. The provision is consequently subject to adjustment in the future.

### Acid mine drainage

Acid mine drainage ("AMD") or acid rock drainage ("ARD"), collectively called acid drainage ("AD") is formed when certain sulphide minerals in rocks are exposed to oxidising conditions (such as the presence of oxygen, combined with water). AD can occur under natural conditions or as a result of the sulphide minerals that are encountered and exposed to oxidation during mining or during storage in waste rock dumps, ore stockpiles or tailings dams. The acidic water that forms usually contains iron and other metals if they are contained in the host rock.

Gold Fields has identified incidences of AD, and the risk of potential short-term and long-term AD issues, specifically at its Cerro Corona, South Deep and St Ives mines and, at currently immaterial levels, its Tarkwa and Damang mines.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 35. CONTINGENT LIABILITIES (continued)

#### Acid mine drainage (continued)

Gold Fields commissioned additional technical studies during 2015 to 2021 to identify the steps required to prevent or mitigate the potentially material AD impacts at Cerro Corona but none of these studies have allowed Gold Fields to generate a reliable estimate of the total potential impact on the Group. South Deep have concluded technical studies which have indicated that, subject to the implementation of targeted mitigation measures (such as landfill removal and specialised cover on the Doornpoort tailings landforms) and no regional hydrogeological changes, AD generation will be mitigated and/or contained thus resulting in no potential residual environmental risk. St Ives has initiated technical investigations into potential AD generation, identified as part of progressive rehabilitation activities, at the Cave Rocks landform and open pit. Damang is not currently mining at the Rex Open Pit, which has resulted in groundwater rebounding to natural groundwater levels within the Pit. This has inundated the reactive AD zone at Rex Pit and water quality monitoring data has shown no current AD generation. Gold Fields' mine closure cost estimates for 2020 contain costs for the aspects of AD management which the Group has reliably been able to estimate.

Gold Fields continues to investigate technical solutions at Cerro Corona, to better inform appropriate short- and long-term mitigation strategies for AD management and to work towards a reasonable cost estimate of potential issues. Further studies are planned for 2021. South Deep continues to implement required mitigation measures to prevent AD, which have been included in their 2020 closure cost estimates and or business plans. There is an inherent uncertainty on the outcome of the re-watering of Cooke 4 (Ezulwini) and also other possible hydrogeological influences, over which South Deep do not have control. Gold Fields is investigating the AD potential and risk at St Ives (Cave Rocks) and water quality monitoring programmes continue at South Deep and Damang.

No adjustment for any effects on the Group that may result from AD, if any, has been made in the consolidated financial statements other than through the Group's normal environmental rehabilitation costs provision (refer note 25.1).

### 36. EVENTS AFTER THE REPORTING DATE

#### Final dividend

On 18 February 2021, Gold Fields declared a final dividend of 320 SA cents per share.

The following methods and assumptions were used to estimate the fair value of each class of financial instrument:

#### Trade and other receivables, trade and other payables and cash and cash equivalents

The carrying amounts approximate fair values due to the short maturity of these instruments.

#### Loan advanced – contractor

The fair value of the loan advanced to contractor approximates the carrying amount, determined using the discounted cash flow method using market related interest rates.

#### Investments and redeemable preference shares

The fair value of publicly traded instruments (listed investments) is based on quoted market values. Asanko redeemable preference shares are accounted for at fair value based on the expected cash flows as set out in note 17.

#### Warrants

Warrants are measured at fair value, using a standard European call option format based on a standard option theory model, with adjustments to the fair value being recognised in profit or loss.

#### Oil, gold, copper and foreign exchange derivative contracts

The fair values of these contracts are determined by using the applicable valuation models for each instrument type with the key inputs being forward prices, interest rates and volatilities.

#### Environmental trust funds

The environmental trust funds are measured at fair value through profit or loss and amortised cost which approximates fair value based on the nature of the fund's underlying investments.

#### Borrowings

The five-year notes and the 10-year notes (2019: 2020 notes, the five-year notes and the 10-year notes) are issued at a fixed interest rate. The fair values of these notes are based on listed market prices. The fair value of the remaining borrowings approximates their carrying amount, determined using the discounted cash flow method using market related interest rates.

### 37. FINANCIAL INSTRUMENTS (continued)

#### Fair value hierarchy

The Group has the following hierarchy for measuring the fair value of assets and liabilities at the reporting date:

#### Level 1

Unadjusted quoted prices in active markets for identical assets or liabilities;

#### Level 2

Inputs other than quoted prices in level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

#### Level 3

Inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The Group recognises transfers between levels of the fair value hierarchy at the end of the reporting period during which the change has occurred. There were no transfers during the years ended 31 December 2020 and 2019.

The following table sets out the Group's financial assets and financial liabilities by level within the fair value hierarchy at the reporting date:

#### United States Dollar

<i>Figures in millions unless otherwise stated</i>	2020				2019

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 37. FINANCIAL INSTRUMENTS (continued)

#### **Environmental trust funds**

The environmental trust funds are measured at fair value through profit or loss and amortised cost which approximates fair value based on the nature of the fund's underlying investments.

#### **Trade receivables from provisional copper sales**

Valued using quoted market prices based on the forward London Metal Exchange ("LME") and, as such, is classified within level 2 of the fair value hierarchy.

#### **Listed investments**

Comprise equity investments in listed entities and are therefore valued using quoted market prices in active markets.

#### **Asanko redeemable preference shares**

The fair value is based on the expected cash flows of the Asanko Gold Mine based on the life-of-mine model. Refer to note 17 for key inputs.

#### **Warrants**

Warrants are measured at fair value through profit or loss. The fair value is determined using a standard European call option format based on a standard option theory model.

#### **Oil, gold, copper and foreign exchange derivative contracts**

The fair values of these contracts are determined by using the applicable valuation models for each instrument type with the key inputs being forward prices, interest rates, volatilities and exchange rates.

#### **Borrowings**

The five-year notes and the 10-year notes (2019: 2020 notes, the five-year notes and the 10-year notes) are issued at a fixed interest rate. The fair values of these notes are based on listed market prices and are classified within level 1 of the fair value hierarchy. The fair value of the remaining borrowings approximates their carrying amount, determined using the discounted cash flow method and market related interest rates and are classified within level 3 of the fair value hierarchy.

#### **Loan advanced – contractor**

The fair value of the contractor loan approximates its carrying amount, determined using the discounted cash flow method and market related interest rates and is classified within level 3 of the fair value hierarchy.

### 38. RISK MANAGEMENT ACTIVITIES

In the normal course of its operations, the Group is exposed to commodity price, currency, interest rate, liquidity, equity price and credit risk. In order to manage these risks, the Group has developed a comprehensive risk management process to facilitate control and monitoring of these risks.

#### Controlling and managing risk in the Group

Gold Fields has policies in areas such as counterparty exposure, hedging practices and prudential limits which have been approved by Gold Fields' Board of Directors. Management of financial risk is centralised at Gold Fields' treasury department ("Treasury"), which acts as the interface between Gold Fields' operations and counterparty banks. Treasury manages financial risk in accordance with the policies and procedures established by the Gold Fields' Board of Directors and Executive Committee.

Gold Fields' Board of Directors has approved dealing limits for money market, foreign exchange and commodity transactions, which Gold Fields' Treasury is required to adhere to. Among other restrictions, these limits describe which instruments may be traded and demarcate open position limits for each category as well as indicating counterparty credit related limits. The dealing exposure and limits are checked and controlled each day and reported to the Chief Financial Officer.

The objective of Treasury is to manage all financial risks arising from the Group's business activities in order to protect profit and cash flows. Treasury activities of Gold Fields Limited and its subsidiaries are guided by the Treasury Framework and the Treasury Process Control Manual, as well as domestic and international financial market regulations. Treasury activities are currently performed within the Treasury Framework with appropriate resolutions from the Board of Gold Fields Limited, which are reviewed and approved annually by the Audit Committee.

The financial risk management objectives of the Group are defined as follows:

Risk management objectives	Description
<b>Credit risk</b>	
<b>Counterparty exposure</b>	The objective is to only deal with approved counterparts that are of a sound financial standing and who have an official credit rating. The Group is limited to a maximum investment of 2.5% of the financial institutions' equity, which is dependent on the institutions' credit rating. The credit rating used is Fitch Ratings' short-term credit rating for financial institutions.
<b>Investment risk management</b>	The objective is to achieve optimal returns on surplus funds.
<b>Liquidity risk</b>	
<b>Liquidity risk management</b>	The objective is to ensure that the Group is able to meet its short-term commitments through the effective and efficient usage of credit facilities and cash resources.
<b>Funding risk management</b>	The objective is to meet funding requirements timeously and at competitive rates by adopting reliable liquidity management procedures.
<b>Market risk</b>	
<b>Currency risk management</b>	The objective is to maximise the Group's profits by minimising currency fluctuations.
<b>Interest rate risk management</b>	The objective is to identify opportunities to prudently manage interest rate exposures.
<b>Commodity price risk management</b>	Commodity price risk management takes place within limits and with counterparts as approved in the Treasury Framework.
<b>Other risks</b>	
<b>Operational risk management</b>	The objective is to implement controls to adequately mitigate the risk of error and/or fraud.
<b>Banking relations management</b>	The objective is to maintain relationships with credible financial institutions and ensure that all contracts and agreements related to risk management activities are coordinated and consistent throughout the Group and that they comply where necessary with all relevant regulatory and statutory requirements.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Credit risk

Credit risk is the risk of financial loss to the Group if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Group's receivables from customers, cash and cash equivalents as well as environmental trust funds.

The Group has reduced its credit exposure by dealing with a number of counterparties. The Group approves these counterparties according to its risk management policy and ensures that they are of good credit quality.

The combined maximum credit risk exposure of the Group is as follows:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
Environmental trust funds	79.3	69.5
Trade and other receivables <sup>1</sup>	53.2	74.2
Loan advanced – contractor	68.4	–
Derivative financial assets	113.3	1.1
Cash and cash equivalents	886.8	515.0

<sup>1</sup> Trade and other receivables above exclude VAT, import duties, prepayments, payroll receivables and diesel rebates amounting to US\$186.9 million (2019: US\$61.8 million).

#### Expected credit loss assessment for customers

The Group determines each exposure to credit risk based on data that is determined to be predictive of the risk of loss and past experienced credit judgement.

#### Trade and other receivables

The Group's exposure to credit risk is influenced mainly by the individual characteristics of each customer. The Group also considers other factors that might impact on the credit risk of its customer base including default risk and the country in which the customer operates.

Impairment of trade receivables, carried at amortised cost, has been determined using the simplified expected credit loss ("ECL") approach and reflects the short term maturities of the exposures. Gold revenue is recognised at the same time as receipt of the cash, except in Ghana where the cash is received one day after revenue recognition. In Peru, for the sale of copper concentrate, 90% of the cash is received when the revenue is recognised and the remaining 10% cash is received at the end of the quotational period.

Receivables due from the sale of the Tarkwa mining fleet were assessed using the simplified ECL approach. The ECL was based on the Group's understanding of the financial position of the counterparty, including the consideration of their credit risk grade.

#### Concentration risk

At 31 December 2020, the exposure to credit risk for trade receivables by geographic region was as follows:

	United States Dollar	
<i>Figures in millions unless otherwise stated</i>	2020	2019
South Africa	–	–
Ghana	14.3	0.8
Australia	2.7	–
Peru	23.7	22.8
<b>Total trade receivables</b>	<b>40.7</b>	<b>23.6</b>

#### Loan advanced – contractor

The loan advanced to contractor of US\$68.4 million was assessed using the lifetime ECL approach as a result of an increase in credit risk since initial recognition. The ECL was based on the Group's understanding of the financial position of the counterparty, including the consideration of their credit risk grade. The credit risk is managed through Gold Fields' offsetting rights of invoices against the loan advanced to the contractor.

#### Derivative financial assets

The derivative financial assets are held with reputable banks and financial institutions. The Group considers that its derivative financial assets have low credit risk based on the external credit ratings of the counterparties.

#### Cash and cash equivalents

The Group held cash and cash equivalents of US\$886.8 million (2019: US\$515.0 million).

The cash and cash equivalents are held with reputable banks and financial institutions. The loss allowance for cash and cash equivalents is measured at an amount equal to the 12-month ECL. The Group considers that its cash and cash equivalents have low credit risk based on the external credit ratings of the counterparties.

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Credit risk (continued)

##### Environmental trust funds

The Group held environmental trust funds of US\$79.3 million (2019: US\$69.5 million).

The environmental trust funds are held with reputable banks and financial institutions. The loss allowance for environmental trust funds is measured at an amount equal to the 12-month ECL. The Group considers that its environmental trust funds have low credit risk based on the external credit ratings of the counterparties with which the funds are deposited.

Concentration of credit risk on cash and cash equivalents and environmental trust funds is considered minimal due to the Group's investment risk management and counterparty exposure risk management policies.

##### Liquidity risk

In the ordinary course of business, the Group receives cash proceeds from its operations and is required to fund working capital and capital expenditure requirements. The cash is managed to ensure surplus funds are invested to maximise returns while ensuring that capital is safeguarded to the maximum extent possible by investing only with top financial institutions.

Uncommitted borrowing facilities are maintained with several banking counterparties to meet the Group's normal and contingency funding requirements.

The following are the contractually due undiscounted cash flows resulting from maturities of all financial liabilities, including interest payments:

	United States Dollar			
<i>Figures in millions unless otherwise stated</i>	Within one year	Between one and five years	After five years	Total
<b>2020</b>

#### Market risk

Gold Fields is exposed to market risks, including foreign currency, commodity price, equity securities price and interest rate risk associated with underlying assets, liabilities and anticipated transactions. Following periodic evaluation of these exposures, Gold Fields may enter into derivative financial instruments to manage some of these exposures.

The following table summarises the (loss)/gain on financial instruments recognised in profit or loss for the derivative financial instruments entered into by Gold Fields:

	United States Dollar		
<i>Figures in millions unless otherwise stated</i>	2020	2019	2018

#### Foreign currency sensitivity

##### General and policy

In the ordinary course of business, Gold Fields enters into transactions, such as gold sales, denominated in foreign currencies, primarily US Dollars. In addition, Gold Fields has investments and indebtedness in US Dollars, South African Rands and Australian Dollars.

Gold Fields may from time to time establish currency financial instruments to protect underlying cash flows.

Gold Fields' revenues and costs are very sensitive to the Australian Dollar/US Dollar and South African Rand/US Dollar exchange rates because revenues are generated using a gold price denominated in US Dollars, while costs of the Australian and South African operations are incurred principally in Australian Dollar and South African Rand, respectively. Depreciation of the Australian Dollar and/or South African Rand against the US Dollar reduces Gold Fields' average costs when they are translated into US Dollars, thereby increasing the operating margin of the Australian and/or South African operations. Conversely, appreciation of the Australian Dollar and/or South African Rand results in Australian and/or South African operating costs increasing when translated into US Dollars, resulting in lower operating margins. The impact on profitability of changes in the value of the Australian Dollar and South African Rand against the US Dollar could be substantial.

A portion of the Salares Norte project's capital expenditure is denominated in Chilean pesos. Depreciation or appreciation of the Chilean peso against the US dollar will decrease or increase their capital expenditure when translating into US Dollars. In 2020, Gold Fields entered into a foreign currency hedge to mitigate the full exchange rate exposure.

Although this exposes Gold Fields to transaction and translation exposure from fluctuations in foreign currency exchange rates, Gold Fields does not generally hedge its foreign currency exposure, although it may do so in specific circumstances, such as financing projects or acquisitions. Also, Gold Fields on occasion undertakes currency hedging to take advantage of favourable short-term fluctuations in exchange rates when management believes exchange rates are at unsustainable levels.

Currency risk only exists on account of financial instruments being denominated in a currency that is not the functional currency and being of a monetary nature. The Group had no significant exposure to currency risk relating to financial instruments at 31 December 2020. Differences resulting from the translation of financial statements into the Group's presentation currency are not taken into account.

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Foreign currency hedging experience

##### *Salares Norte*

In March 2020, a total notional amount of US\$544.5 million was hedged at a rate of CLP/US\$836.45 for the period July 2020 to December 2022.

At 31 December 2020, the mark-to-market value on the hedge was a positive US\$86.0 million (2019: US\$nil) with a realised gain of US\$5.2 million (2019: US\$nil) and an unrealised gain of US\$86.0 million (2019: US\$nil) for the year ended 31 December 2020.

##### *Australia*

In May 2018, the Australian operations entered into Australian Dollar/US Dollar average rate forwards for a total notional US\$96.0 million for the period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7517.

In June 2018, further hedges were taken out for a total notional US\$60.0 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7330.

In September 2018, further hedges were taken out for a total notional US\$100 million for the same period January 2019 to December 2019 at an average strike price of A\$/US\$ 0.7182.

In October 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$60 million at an average strike price of A\$/US\$ 0.7075.

In December 2018, further hedges were taken out for the period January 2019 to December 2019 for a notional US\$50 million at an average strike price of A\$/US\$ 0.715.

At 31 December 2020, the mark-to-market value on the hedges was A\$nil (US\$nil) (2019: negative A\$0.4 million (US\$0.3 million)) with a realised loss of A\$0.4 million (US\$0.3 million) (2019: A\$22.3 million (US\$15.5 million)), partially offset by an unrealised gain of A\$nil (US\$nil) (2019: A\$11.9 million (US\$8.3 million)) for the year ended 31 December 2020.

#### Commodity price hedging policy

##### *Gold and copper*

The market prices of gold and to a lesser extent copper have a significant effect on the results of operations of Gold Fields, the ability of Gold Fields to pay dividends and undertake capital expenditures, and the market price of Gold Fields' ordinary shares. Gold and copper prices have historically fluctuated widely and are affected by numerous industry factors over which Gold Fields does not have any control. The aggregate effect of these factors on the gold and copper price, all of which are beyond the control of Gold Fields, is impossible for Gold Fields to predict.

##### *Oil*

The market price of oil has a significant effect on the results of the offshore operations of Gold Fields. The offshore operations consume large quantities of diesel in the running of their mining fleets. Oil prices have historically fluctuated widely and are affected by numerous factors over which Gold Fields does not have any control.

#### Commodity price hedging experience

The Group's policy is to remain unhedged to the gold and copper price. However, hedges are sometimes undertaken as follows:

- to protect cash flows at times of significant expenditure;
- for specific debt servicing requirements; and
- to safeguard the viability of higher cost operations.

To the extent that it enters into commodity hedging arrangements, Gold Fields seeks to use different counterparty banks consisting of local and international banks to spread risk. None of the counterparties is affiliated with, or related parties of, Gold Fields.

##### *Gold and copper*

##### *Australia*

In February 2018, the Australian operations entered into Asian swaps (Asian swaps are options where the payoff is determined by the average monthly gold price over the option period) for the period June 2018 to December 2018 for a total of 221,000 ounces of gold. The average strike price on the swaps was A\$1,714 per ounce.

In March 2018, the Australian operations entered into zero cost collars for the period April 2018 to December 2018 for a total of 452,800 ounces of gold. The average strike prices are A\$1,703 per ounce on the floor and US\$1,767 per ounce on the cap.

In December 2018, additional Asian swaps were entered into for the period January 2019 to December 2019 for a notional 283,000 ounces of gold at an average strike price of A\$1,751 per ounce.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Commodity price hedging experience (continued)

In December 2018, additional zero cost collars were executed for the period January 2019 to December 2019 for a notional 173,000 ounces of gold with a strike price on the floor at A\$1,720 per ounce and the strike price on the cap at A\$1,789 per ounce.

In January 2019, zero cost collars were executed for the period January 2019 to December 2019 for a notional 456,000 ounces of gold with a strike price on the floor at A\$1,800 per ounce and the strike price on the cap at A\$1,869 per ounce.

In June 2019, a total of 480,000 ounces of the expected production for 2020 for the Australian region was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars (270,000 ounces) and average rate forwards (210,000 ounces). The average strike prices are A\$1,933 per ounce on the floor and A\$2,014 on the cap. The average strike price on the forwards is A\$1,957 per ounce.

In the first six months of 2020, 400,000 ounces of the expected production for 2021 was hedged for the period January 2021 to December 2021 using bought puts. Between July and October 2020, an additional 600,000 ounces of the expected production for 2021 was hedged for the period January 2021 to December 2021 using bought puts. The average strike price of the total 1,000,000 ounces hedged is A\$2,190 per ounce.

At 31 December 2020, the mark-to-market value on the hedges was positive A\$35.5 million (US\$27.3 million) (2019: negative A\$111.5 million (US\$78.3 million)) with a realised loss of A\$292.2 million (US\$201.4 million) (2019: A\$163.0 million (US\$113.4 million)), partially offset by an unrealised gain and prior year mark-to-market reversals of A\$104.0 million (US\$71.8 million) (2019: unrealised loss of A\$93.4 million (US\$65.4 million)) for the year ended 31 December 2020.

#### Peru

In November 2017, zero-cost collars were entered into for the period January 2018 to December 2018. A total volume of 29,400 tonnes was hedged, at an average floor price of US\$6,600 per tonne and an average cap price of US\$7,431 per tonne.

In October and November 2020, a total of 24,000 metric tonnes of copper were hedged using cash-settled zero cost collars. The hedges are for the period January 2021 to December 2021 and represent the total planned production for 2021. The average strike price is US\$6,525 per metric tonnes on the floor and US\$7,382 per metric tonnes on the cap.

At 31 December 2020 the mark-to-market valuation of the hedge was a negative US\$14.0 million (2019: US\$nil), with a realised gain of US\$nil (2019: US\$1.2 million), offset by an unrealised loss of US\$14.0 million (2019 US\$1.2 million).

#### South Africa

Between October 2018 and January 2019, South Deep entered into cash-settled average rate forwards for a total of 112,613 ounces for the period June 2019 to December 2019 at an average strike rate of R617,000 per kilogram.

In June 2019, a total of 200,000 ounces of the expected production for 2020 for South Deep was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars (100,000 ounces) and average rate forwards (100,000 ounces). The average strike price is R660,000 per kilogram on the floor and R727,000 per kilogram on the cap. The average strike price is R681,400 per kilogram on the forwards.

At 31 December 2020, the mark-to-market value on the hedge was Rnil (US\$nil) (2019: R176.0 million (US\$12.6 million)) as all instruments had matured with a realised loss of R1,562.6 million (US\$95.4 million) (2019: R219.8 million (US\$15.2 million)), partially offset by an unrealised gain and prior year mark-to-market reversals of R176.0 million (US\$10.7 million) (2019: unrealised loss of R152.7 million (US\$10.6 million)) for the year ended 31 December 2020.

#### Ghana

In January 2018 and April 2018, a total of 488,900 ounces of the expected production for the Ghanaian region was hedged for the period January 2018 to December 2018 using zero-cost collars. The average strike prices are US\$1,300 per ounce on the floor and US\$1,418 per ounce on the cap.

In June 2019, a total of 275,000 ounces of the expected production for 2020 for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero-cost collars (175,000 ounces) and average rate forwards (100,000 ounces). The average strike prices are US\$1,364 per ounce on the floor and US\$1,449 per ounce on the cap. The average strike price on the forwards is US\$1,382 per ounce.

Subsequent to 30 June 2019, 100,000 ounces of the expected production for the Ghanaian region was hedged for the period January 2020 to December 2020 using cash-settled zero cost collars. The average strike prices are US\$1,400 per ounce on the floor and US\$1,557 per ounce on the cap.

At 31 December 2020, the mark-to market value on the hedge was US\$nil (2019: negative US\$36.4 million) as all the instruments matured, with a realised loss of US\$114.5 million (2019: a realised gain of US\$2.3 million), partially offset by an unrealised gain and prior year mark-to-market reversals of US\$36.4 million (2019: an unrealised loss of US\$38.9 million) for the year ended 31 December 2020.

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Commodity price hedging experience (continued)

##### Oil

##### Australia

In May 2017 and June 2017, the Australian operations entered into fixed price Singapore 10ppm Gasoil cash-settled swap transactions for a total of 77.5 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$61.2 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenor was US\$49.9 per barrel.

In June 2019 fixed price Singapore 10ppm Gasoil cash-settled swap transactions were entered into for a total of 75.0 million litres of diesel for the period January 2020 to December 2022 based on 50 per cent of usage over the specified period. The average swap price is US\$74.0 per barrel. At the time of the transactions, the average Brent swap equivalent over the tenor was US\$57.4 per barrel.

At 31 December 2020, the mark-to-market value on the hedge was a negative A\$6.6 million (US\$5.1 million) (2019: a positive A\$1.4 million (US\$1.0 million)) with a realised loss of A\$4.9 million (US\$3.4 million) (2019: a realised gain of A\$4.5 million (US\$3.1 million)) and an unrealised loss of A\$8.0 million (A\$5.5 million) (2019: A\$1.1 million (US\$0.8 million)) for the year ended 31 December 2020.

##### Ghana

In May 2017 and June 2017, the Ghanaian operations entered into fixed price ICE Gasoil cash-settled swap transactions for a total of 125.8 million litres of diesel for the period June 2017 to December 2019. The average swap price is US\$457.2 per metric tonne (equivalent US\$61.4 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenor was US\$49.8 per barrel.

In June 2019 fixed price ICE Gasoil cash-settled swap transactions were entered into for a total of 123.2 million litres of diesel for the period January 2020 to December 2022 based on 50 per cent of usage over the specified period. The average swap price is US\$575 per metric tonne (equivalent to US\$75.8 per barrel). At the time of the transactions, the average Brent swap equivalent over the tenor was US\$59.2 per barrel.

At 31 December 2020, the mark-to-market value on the hedge was a negative US\$10.0 million (2019: a positive US\$0.1 million) with a realised a realised loss of R6.8 million (2019: a gain of US\$5.4 million) and an unrealised loss of US\$10.1 million (2019: US\$2.9 million).

The gains and losses on the above hedges were recognised in profit or loss and are included in the gain on financial instruments line item. The Group has not designated the instruments for hedge accounting.

#### IFRS 7 sensitivity analysis

IFRS 7 requires sensitivity analysis that shows the effects of reasonably possible changes of relevant risk variables on profit or loss or shareholders' equity. The Group is exposed to commodity price, currency, interest rate and equity price risks. The effects are determined by relating the reasonably possible change in the risk variable to the balance of financial instruments at reporting date.

The amounts generated from the sensitivity analysis on the next page are forward-looking estimates of market risks assuming certain adverse or favourable market conditions occur. Actual results in the future may differ materially from those projected results and therefore should not be considered a projection of likely future events and gains/losses.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Commodity price hedging experience (continued)

##### Commodity price hedging sensitivity

The tables below summarise the effect of a change in the loss on financial instruments on the Group's profit or loss in case of changes in the key inputs used to value the gold derivative contracts. The first analysis is based on the assumption that the gold forward prices have increased/decreased with all other variables held constant. The second analysis is based on the assumption that the interest rates increased/decreased with all other variables held constant.

#### United States Dollar

Sensitivity to gold forward prices <small>Figures in millions unless otherwise stated</small>	(Decrease)/increase in gold forward prices					
	(US\$150)	(US\$100)	(US\$50)	US\$50	US\$100	US\$150
<b>2020</b>						
(Increase)/decrease in loss on financial instruments	35.4	20.1	8.6	(6.5)	(11.4)	(15.0)
<b>2019</b>						
(Increase)/decrease in loss on financial instruments	120.8	85.7	45.4	(48.7)	(99.4)	(151.1)

#### United States Dollar

Sensitivity to interest rates <sup>1</sup> <small>Figures in millions unless otherwise stated</small>	(Decrease)/increase in interest rates					
	(1.5%)	(1.0%)	(0.5%)	0.5%	1.0%	1.5%
<b>2020</b>						
(Increase)/decrease in loss on financial instruments	(5.2)	(2.9)	(0.8)	3.0	4.8	6.4
<b>2019</b>						
(Increase)/decrease in loss on financial instruments	5.9	4.0	2.0	(2.1)	(4.2)	(6.3)

<sup>1</sup> In determining the interest rate sensitivity of the AUD XAU Puts only the impact of the specified interest rate change on the risk-free interest rate as used in the Black-Scholes Option pricing was considered.

##### Foreign currency hedging sensitivity

The tables below summarise the effect of a change in the loss on financial instruments on the Group's profit or loss in case of changes in the key inputs used to value the Salares Norte foreign currency contracts. The first analysis is based on the assumption that the Chilean Peso exchange rates have increased/decreased with all other variables held constant. The second analysis is based on the assumption that the interest rates increased/decreased with all other variables held constant.

#### United States Dollar

Sensitivity to exchange rate <small>Figures in millions unless otherwise stated</small>	(Decrease)/increase in Chilean peso exchange rate					
	(15.0%)	(10.0%)	(5.0%)	5.0%	10.0%	15.0%

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Equity securities price risk

The Group is exposed to equity securities price risk because of investments held by the Group which are designated at fair value through OCI. To manage its price risk arising from investments in equity securities, the Group diversifies its portfolio. Diversification of the portfolio is done in accordance with limits set by the Group.

The Group's equity investments are publicly traded and are listed on one of the following exchanges:

- JSE Limited
- Toronto Stock Exchange
- Australian Stock Exchange
- London Stock Exchange

The table below summarises the impact of increases/decreases of the equity prices of listed investments at fair value through OCI on the Group's shareholders' equity. The analysis is based on the assumption that the share prices quoted on the exchange have increased/decreased with all other variables held constant and the Group's investments moved according to the historical correlation with the index.

Sensitivity to equity security price <i>Figures in millions unless otherwise stated</i>	United States Dollar			
	(Decrease)/increase in equity price			
	(10.0%)	(5.0%)	5.0%	10.0%
<b>2020</b>				
(Decrease)/increase in OCI <sup>1</sup>	(4.2)	(2.1)	2.1	4.2
<b>2019</b>				
(Decrease)/increase in OCI <sup>1</sup>	(4.8)	(2.4)	2.4	4.8

<sup>1</sup> Spot rate: R14.69 = US\$1.00 (2019: R14.00 = US\$1.00).

#### Preference shares price risk

The Group is exposed to preference shares price risk because of the Asanko preference shares which are designated at fair value through OCI. The fair value of the redeemable preference shares is based on the expected cash flows of the Asanko Gold Mine based on the life-of-mine model. Refer to note 17 for further details.

The tables below summarise the impact of increases/decreases on the Group's shareholders' equity in case of changes in the key inputs used to value the preference shares. The first analysis is based on the assumption that the market related discount rate have increased/decreased with all other variables held constant. The second analysis is based on the assumption that the timing of the cash flows used in the life-of-mine model increased/decreased with all other variables held constant.

Sensitivity to preference share price risk <i>Figures in millions unless otherwise stated</i>	United States Dollar			
	(Decrease)/increase in discount rate

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 38. RISK MANAGEMENT ACTIVITIES (continued)

#### Interest rate sensitivity

##### General

As Gold Fields has no significant interest-bearing assets, the Group's income and operating cash flows are substantially independent of changes in market interest rates. Gold Fields' interest rate risk arises from borrowings.

As of 31 December 2020, Gold Fields' borrowings amounted to US\$1,526.9 million (2019: US\$1,845.8 million). Gold Fields generally does not undertake any specific action to cover its exposure to interest rate risk, although it may do so in specific circumstances.

##### LIBOR developments

Developments in respect of the proposed reform/cessation of US dollar LIBOR and the impact thereof on our LIBOR linked borrowing facilities are actively monitored. Changes to the interest rate benchmark will be considered in conjunction with the surrounding facts and circumstances at the time and appropriate changes and resetting/replacement of rates with counterparties will be negotiated and agreed. Gold Fields does not believe that LIBOR reform will have a material impact on the Group's finance cost.

##### Interest rate sensitivity analysis

The portion of Gold Fields' interest-bearing borrowings at year-end that is exposed to interest rate fluctuations is US\$533.5 million (2019: US\$252.0 million). These borrowings are normally rolled for periods between one and three months and are therefore exposed to the rate changes in this period. The remainder of the borrowings bear interest at a fixed rate.

US\$333.5 million (2019: US\$83.5 million) of the total borrowings at reporting date is exposed to changes in the LIBOR rate and US\$200.0 million (2019: US\$168.5 million) is exposed to the BBSY rate. The relevant interest rates for each facility are described in note 24.

##### Interest rate sensitivity analysis

The table below summarises the effect of a change in finance expense on the Group's profit or loss had LIBOR, JIBAR, Prime and BBSY differed as indicated. The analysis is based on the assumption that the applicable interest rate increased/decreased with all other variables held constant and is calculated on the weighted average borrowings for the year. All financial instruments with fixed interest rates that are carried at amortised cost are not subject to the interest rate sensitivity analysis.

#### United States Dollar

### 39. CAPITAL MANAGEMENT

The primary objective of managing the Group's capital is to ensure that there is sufficient capital available to support the funding requirements of the Group, including capital expenditure, in a way that:

- optimises the cost of capital
- maximises shareholders' returns, and
- ensures that the Group remains in a sound financial position.

There were no changes to the Group's overall capital management approach during the current year.

The Group manages and makes adjustments to the capital structure as and when borrowings mature or as and when funding is required. This may take the form of raising equity, market or bank debt or hybrids thereof. Opportunities in the market are also monitored closely to ensure that the most efficient funding solutions are implemented.

The Group monitors capital using the ratio of net debt to adjusted EBITDA. Adjusted EBITDA is defined as profit or loss for the year adjusted for interest, taxation, amortisation and depreciation and certain other costs. For external borrowings, the definition of adjusted EBITDA is as defined in the US\$1,200 million term loan and revolving credit facilities agreement. Net debt is defined as total borrowing plus lease liabilities less cash and cash equivalents. The Group's long-term target is a ratio of net debt to adjusted EBITDA of one times or lower. The bank covenants on external borrowings entered into after 1 January 2019 require a net debt to adjusted EBITDA ratio of 3.5 or below and the ratio is measured based on amounts in United States Dollar.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS continued

for the year ended 31 December 2020

### 40. RELATED PARTIES

#### (a) Subsidiaries, associates and joint ventures

The subsidiaries, associates and joint ventures of the Company are disclosed in note 42.

All transactions and balances with these related parties have been eliminated in accordance with and to the extent required by IFRS 10 *Consolidated Financial Statements*, IFRS 11 *Joint Arrangements* and IAS 28 *Investments in Associates and Joint Ventures*.

#### (b) Key management remuneration

Key management personnel include Executive Directors and prescribed officers (“Executive Committee”). The total key management remuneration amounted to US\$23.6 million (2019: US\$21.3 million) for 2020.

The details of key management personnel, including remuneration and participation in the Gold Fields Limited share scheme and LTIP are disclosed in note 40 (c).

#### (c) Directors’ and prescribed officers’ remuneration

None of the Directors and officers of Gold Fields or, to the knowledge of Gold Fields, their families, had any interest, direct or indirect, in any transaction during the last three fiscal periods or in any proposed transaction which has affected or will materially affect Gold Fields or its investment interests or subsidiaries, other than as stated below.

None of the Directors or officers of Gold Fields or any associate of such Director or officer is currently or has been at any time during the past three fiscal periods indebted to Gold Fields.

At 31 December 2020, the Executive Committee and Non-executive Directors’ beneficial interest in the issued and listed stated capital of the Company was 0.3% (2019: 0.1% and 2018: 0.1%). No one Director’s interest individually exceeds 1% of the issued stated capital or voting control of the Company.

#### *Non-executive Directors (“NEDs”)*

NEDs’ fees reflect their services as Directors and services on various subcommittees on which they serve.

NEDs do not participate in any of the short- or long-term incentive plans and there are no arrangements in place for compensation to be awarded in the case of loss of office.

The Remuneration Committee seeks to align NEDs’ fees to the median of an appropriate peer group and reviews fee structures for NEDs on an annual basis. Approval is sought from shareholders after recommendation by the Board at the Annual General Meeting.

The following table summarises the remuneration for NEDs for the years ended 31 December 2020 and 2019:

	Directors’ fees US\$’000	Board fees Committee fees US\$’000	Total US\$’000

The above is a geographical analysis presented by location of assets. The Group's operations are primarily involved in gold mining, exploration and related activities. Activities are conducted and investments held both inside and outside South Africa. The segment results have been prepared and presented based on management's reporting format. Gold mining operations are managed and internally reported based on the following geographical areas: in South Africa, South Deep mine, in Ghana, Tarkwa, Damang and Asanko mines, in Australia, St Ives, Agnew, Granny Smith and Gruyere and in Peru, the Cerro Corona mine. The Group also has exploration interests which are included in the "Corporate and other" segment. Refer to accounting policies on segment reporting on page 133.

Figures may not add as they are rounded independently.

<sup>1</sup> The income statement and statement of financial position of South Deep is that of the operating mine and does not include any of the adjustments made in respect of the purchase price allocation relating to the acquisition of South Deep. South Deep Gold mine, being an unincorporated joint venture, is not liable for taxation. Taxation included in South Deep is indicative, as tax is provided in the holding companies at a rate of 29%.

<sup>2</sup> For the purpose of the review of the segment by the CODM, Asanko's income statement is proportionately consolidated in the Ghana segment. Equity Accounted Joint Venture carried at US\$88.9 million.

<sup>3</sup> "Corporate and other" represents the items to reconcile segment data to consolidated financial statement totals, including the elimination of intercompany transactions and balances as well as the Group's exploration interests. This does not represent a separate segment as it does not generate revenue. Included in "Corporate and other" is the adjustment made in respect of the purchase price allocation of South Deep.

<sup>4</sup> Other costs "Corporate and other" comprise share of losses of equity-accounted investees, net of taxation of US\$2.0 million, which include the impairment of mining assets at Asanko Gold Mine of US\$49.5 million, Salares VAT income of US\$23.9 million (refer note 8 for details), offset by US\$8.3 million expenses which consists mainly of corporate related costs.

<sup>5</sup> The Australian operations are entitled to transfer and off-set profits and losses from one company to another, therefore it is not meaningful to split the royalties, income or deferred taxation.

<sup>6</sup> Capital expenditure for the year ended 31 December 2020.

<sup>7</sup> Includes revenue from the sale of copper amounting to US\$144.1 million.

The above is a geographical analysis presented by location of assets.

The Group's operations are primarily involved in gold mining, exploration and related activities. Activities are conducted and investments held both inside and outside South Africa. The segment results have been prepared and presented based on management's reporting format. Gold mining operations are managed and internally reported based on the following geographical areas: in South Africa, South Deep mine, in Ghana, Tarkwa, Damang and Asanko mines, in Australia, St Ives, Agnew, Granny Smith and Gruyere and in Peru, the Cerro Corona mine. The Group also has exploration interests which are included in the "Corporate and other" segment. Refer to accounting policies on segment reporting on page 155.

Figures may not add as they are rounded independently.

<sup>1</sup> The income statement and statement of financial position of South Deep is that of the operating mine and does not include any of the adjustments made in respect of the purchase price allocation relating to the acquisition of South Deep. South Deep Gold mine, being an unincorporated joint venture, is not liable for taxation. Taxation included in South Deep is indicative, as tax is provided in the holding companies at a rate of 28%.

<sup>2</sup> For the purpose of the review of the segment by the CODM, Asanko's income statement is proportionately consolidated in the Ghana segment. Equity Accounted Joint Venture carried at US\$89.9 million.

<sup>3</sup> "Corporate and other" represents the items to reconcile segment data to consolidated financial statement totals, including the elimination of intercompany transactions and balances as well as the Group's exploration interests. This does not represent a separate segment as it does not generate revenue. Included in "Corporate and other" is the adjustment made in respect of the purchase price allocation of South Deep.

<sup>4</sup> Other costs: Corporate and other comprise share of profit of equity-accounted investees, net of taxation of US\$3.1 million, loss on buy-back of US\$1 billion notes of US\$5.0 million and the balance of US\$18.9 million consists mainly of corporate related costs.

<sup>5</sup> The Australian operations are entitled to transfer and off-set profits and losses from one company to another, therefore it is not meaningful to split the royalties, income or deferred taxation.

<sup>6</sup> Capital expenditure for the year ended 31 December 2019.

<sup>7</sup> Includes revenue from the sale of copper amounting to US\$165.1 million.

The above is a geographical analysis presented by location of assets.

The Group's continuing operations are primarily involved in gold mining, exploration and related activities. Activities are conducted and investments held both inside and outside South Africa. The segment results have been prepared and presented based on management's reporting format. Gold mining operations are managed and internally reported based on the following geographical areas: in South Africa, South Deep mine, in Ghana, Tarkwa and Damang mines, in Australia, St Ives, Agnew, Gruyere, Smith and Gruyere Gold project and in Peru, the Cerro Corona mine. While the Gruyere Gold project does not meet the quantitative criteria for disclosure as a separate segment, it is expected to become a significant contributor to the Group's performance in future years as the project is being developed. The Group also has exploration interests which are included in the "Corporate and other" segment. Refer to accounting policies on segment reporting on page 155.

Figures may not add as they are rounded independently.

<sup>1</sup> The income statement and statement of financial position of South Deep is that of the operating mine and does not include any of the adjustments made in respect of the purchase price allocation relating to the acquisition of South Deep. South Deep Gold mine, being an unincorporated joint venture, is not liable for taxation. Taxation included in South Deep is indicative, as tax is provided in the holding companies at a rate of 29%.

<sup>2</sup> For the purpose of the review of the segment by the CODM, Asanko's income statement is proportionately consolidated in the Ghana segment. Equity accounted joint venture carried at US\$85.8 million.

<sup>3</sup> "Corporate and other" represents the items to reconcile segment data to consolidated financial statement totals, including the elimination of intercompany transactions and balances as well as the Group's exploration interests. This does not represent a separate segment as it does not generate revenue. Included in "Corporate and other" is the adjustment made in respect of the purchase price allocation of South Deep.

<sup>4</sup> Other costs: "Corporate and other" comprise share of loss of equity-accounted investees, net of taxation of US\$31.4 million and the balance of US\$31.4 million consists mainly of corporate-related costs.

<sup>5</sup> The Australian operations are entitled to transfer and off-set profits and losses from one company to another, therefore it is not meaningful to split the royalties, income or deferred taxation.

<sup>6</sup> Capital expenditure for the year ended 31 December 2018.

<sup>7</sup> Includes revenue from the sale of copper amounting to US\$169.2 million.

<sup>1</sup> Incorporated in Ghana.

<sup>2</sup> Incorporated in Australia.

<sup>3</sup> Incorporated in the Republic of South Africa.

<sup>4</sup> Incorporated in Peru.

<sup>5</sup> Incorporated in the British Virgin Islands.

<sup>6</sup> Abosso Goldfields Limited (“Abosso”) owns the Damang operation in Ghana. The accumulated non-controlling interest of Abosso at 31 December 2020 amounts to US\$12.0 million (2019: US\$7.9 million). A dividend of US\$4.5 million was advanced to non-controlling interest during 2020 (2019: US\$nil). Refer to the segment reporting, note 41, for summarised financial information of Damang.

<sup>7</sup> Gold Fields Ghana Limited (“GFG”) owns the Tarkwa operation in Ghana. The accumulated non-controlling interest of GFG at 31 December 2020 amounts to US\$142.7 million (2019: US\$125.5 million). A dividend of US\$5.1 million was advanced to non-controlling interest during 2020 (2019: US\$2.0 million). Refer to the segment reporting, note 41, for summarised financial information of Tarkwa.

<sup>8</sup> Gold Fields La Cima S.A. (“La Cima”) owns the Cerro Corona operation in Peru. The accumulated non-controlling interest of La Cima at 31 December 2020 amounts to US\$1.9 million (2019: US\$2.1 million). A dividend of US\$0.5 million was paid to non-controlling interest during 2020 (2019: US\$0.2 million). Refer to the segment reporting, note 41, financial information of Cerro Corona.

<sup>9</sup> The South Deep Joint Venture (“SDJV”) owns and operates the South Deep Gold Mine. The SDJV is an unincorporated joint venture between Gold Fields Operations Limited (“GFO”) and GFI Joint Venture Holdings Proprietary Limited (“GFIJVH”). GFO and GFIJVH are wholly owned subsidiaries of Newshef 899 Proprietary Limited (“Newshef”). The share capital of Newshef comprises of:

- 90 000 000 “A” shares, representing 90% of Newshef’s equity. Gold Fields Limited is the holder of the “A” shares; and
- 10 000 000 “B” shares, representing 10% of Newshef’s equity. South Deep’s BEE shareholders are the holders of the “B” shares.

<sup>10</sup> The “B” shares entitle the BEE shareholders to a cumulative preferential dividend of R20.0 million per annum for the first 10 years (expired in December 2020), R13.3 million per annum for the next five years and R6.7 million for the five years thereafter. After 20 years, this preferential dividend will cease. The “B” shares’ rights to participate in the profits of Newshef over and above the cumulative preferred dividend were initially suspended. The suspension will be lifted over a 20 year period on a phased-in basis as follows:

- after 10 years, in respect of one-third of the “B” shares;
- after 15 years, in respect of another one-third of the “B” shares; and
- after 20 years, in respect of the remaining one-third of the “B” shares.

After 20 years, all of the “B” shares will substantially have the same rights as the “A” shares. The BEE shareholders must retain ownership of the “B” shares for 30 years.

<sup>11</sup> These subsidiaries were in the process of voluntary liquidation at 31 December 2020.

<sup>#</sup> Transition from project to operation from September 2008.

\* Cerro Corona is a gold and copper mine. As such, gold produced and all-in costs are based on gold equivalent ounces.

\*\* All-in costs: as from 2014 per the new World Gold Council Standard issued on 27 June 2013. Up to 2014, cash cost was the key metric.

## SHAREHOLDERS' INFORMATION

Register date: 31 December 2020  
Issued Share Capital: 883,333,518 shares

## GLOSSARY OF TERMS

<b>ABET</b>	Adult Basic Education and Training
<b>AISC</b>	All-in sustaining costs. AISC comprises on-site mining costs (on a sales basis); on-site general and administrative costs; royalties and production taxes; realised gains/losses on hedges due to operating costs; community costs related to current operations; permitting costs related to current operations; third-party smelting, refining and transport costs; non-cash remuneration (site-based); stock-piles/product inventory write-down; operational stripping costs; by-product credits; corporate general and administrative costs (including share-based remuneration); reclamation and remediation – accretion and amortisation (operating sites); exploration and study costs (sustaining); and capital exploration (sustaining)
<b>AIC</b>	All-in costs. AIC is AISC plus community costs not related to current operations; community costs not related to current operations; reclamation and remediation costs not related to current operations; exploration and study costs (non-sustaining); capital exploration (non-sustaining); capitalised stripping & underground mine development (non-sustaining); and capital expenditure (non-sustaining)
<b>AS/NZ 4801</b>	Australian occupational health and safety management standards
<b>Backfill</b>	Material generally sourced from processing plant mine residues and utilised for the filling of mined voids, to ensure long-term stability of excavations and minimise the effects of seismic activity
<b>BEE</b>	Black Economic Empowerment. BEE seeks to ensure that black persons within South Africa gain a significant degree of control in the economy through the possession of equity stakes and the holding of management positions within an institution
<b>Blasthole</b>	The hole into which a blasting charge is inserted in order to blast loose a quantity of rock
<b>Borehole or drill hole</b>	Hole bored or drilled in rock, usually to obtain representative samples (see diamond drill)
<b>Box-hole</b>	A cross raise, normally from the access cross-cut to the reef horizon, for the purpose of drawing broken rock and ore from the reef horizon into a conveyance in the cross-cut
<b>Bulk mining</b>	Any large-scale, mechanised method of mining involving many thousands of tonnes of ore being blasted or caved and transported to a processing plant
<b>BVQI</b>	Bureau Veritas Quality International is a leading global and independent certification body that audits and certifies whether company systems meet the requirements of ISO standards
<b>Carbon-in-leach (“CIL”)</b>	The recovery process in which gold is leached from gold-bearing ore pulp by cyanide and simultaneously adsorbed onto activated carbon granules in the same tanks. The loaded carbon is then separated from the pulp for subsequent gold removal by elution.
<b>Capital expenditure (or capex)</b>	Specific project or ongoing expenditure for replacement or additional equipment, materials or infrastructure
<b>Carbon-in-pulp (“CIP”)</b>	The recovery process in which gold is first leached to close to maximum extent from gold-bearing ore pulp by cyanide and then adsorbed onto activated carbon granules in separate and subsequent tanks. The loaded carbon is then separated from the pulp for subsequent gold removal by elution
<b>Channel</b>	Historic water course into which sediments consisting of gravel and sand are/have been deposited
<b>Collective Bargaining Agreement</b>	Collective Bargaining Agreement means a written agreement concerning terms and conditions of employment or any other matter of mutual interest concluded by a trade union(s) and the Company

<b>Comminution</b>	The term used to describe the process by which ore is reduced in size in order to liberate the desired mineral from the gangue material in preparation for further processing
<b>Co-morbidity</b>	Medical term for diseases that commonly co-exist, which increase the risk of morbidity
<b>Concentrate</b>	A metal-rich product resulting from a mineral enrichment process such as gravity concentration or flotation, in which most of the desired mineral has been separated from the waste material in the ore
<b>Conglomerate</b>	Sedimentary rocks comprising eroded subangular to rounded pebbles within a finer-grained matrix
<b>Cross-cut</b>	A horizontal underground drive developed perpendicular to the strike direction of the stratigraphy and reef
<b>Cut-off grade</b>	The lowest grade of mineralised ore, which determines whether or not it is economic to mine and send to the processing plant
<b>Decline</b>	An excavation from surface or subsurface, in the form of a tunnel, which is developed downwards
<b>Depletion</b>	The decrease in quantity of ore, in a deposit or property resulting from extraction or mining
<b>Development</b>	Is any tunnelling operation that is developed for either exploration, exploitation or both
<b>Diamond drill</b>	A rotary type of rock drill that cuts a core of rock by diamond bits and is recovered in long cylindrical sections
<b>Dilution</b>	Waste or material below the cut-off grade that contaminates the ore during the course of mining operations and thereby reduces the average grade mined
<b>Dip</b>	Angle of inclination (of a geological feature/rock) from the horizontal
<b>Dyke</b>	Tabular, vertical or near vertical body of igneous rock formed by the intrusion of magma generally into planar structural zones of weakness
<b>Elution</b>	The chemical process of desorbing gold from activated carbon
<b>Facies</b>	The characteristics of a rock unit defined by its composition, lithology, physical properties and geochemical parameters, usually reflecting the conditions of its origin
<b>Fatality rate</b>	Number of deaths normally expressed as a ratio per million man-hours worked
<b>Fault</b>	The surface or plane of a fracture along which movement has occurred
<b>Feasibility study</b>	A comprehensive design and costing study of the selected option for the development of a mineral project in which appropriate assessments have been made of realistically assumed geological, mining, metallurgical, economic, marketing, legal, environmental, social, governmental, engineering, operational and all other modifying factors, which are considered in sufficient detail to demonstrate at the time of reporting that extraction is reasonably justified (economically mineable) and the factors reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The overall confidence of the study should be stated
<b>Filtration</b>	Process of separating usually valuable solid material from a liquid

## GLOSSARY OF TERMS (continued)

<b>Flotation</b>	The process by which the surface chemistry of the desired mineral particles is chemically modified such that they preferentially attach themselves to bubbles and float to the surface of the pulp in specially designed aerated and agitated vessels. The gangue or waste minerals may be chemically depressed to not float, thus allowing the valuable minerals to be concentrated and separated from the undesired material
<b>Footwall</b>	The underlying side of an ore body or stope
<b>Free cash flow margin</b>	The free cash flow (“FCF”) margin is revenue less cash outflow divided by revenue expressed as a percentage
<b>Gold equivalent</b>	A quantity of metal (such as copper) converted to an amount of gold in ounces, based on accepted gold and other metal prices, i.e. the accepted total value of the metal based on its weight and value thereof divided by the accepted value of one troy ounce of gold
<b>Grade</b>	The quantity of gold or other metal contained within a unit weight of one metric tonne, generally expressed in grams per metric tonne (“g/t”) or percent metal per metric tonne (%)
<b>Hanging wall</b>	The overlying side of an ore body or slope
<b>Haulage</b>	A horizontal underground excavation which is used to transport mined ore
<b>Head grade</b>	The grade of the material delivered to the processing facility (such as heap leach pad, mill, etc.) The Mineral Reserve declaration is for material as delivered to the processing facility
<b>Hedging</b>	Taking a buy or sell position in futures market opposite to a position held in the cash/spot market to minimise the risk of financial loss from an adverse price change
<b>Hydrothermal</b>	Process of injection of hot, aqueous, generally mineral-rich solutions into existing rocks or geological features
<b>ICVCT</b>	Informed Consented Voluntary Counselling and Testing
<b>Indicated Mineral Resources</b>	That part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes. The locations are too widely or inappropriately spaced to confirm geological and/or grade continuity but are spaced closely enough for continuity to be assumed
<b>Inferred Mineral Resource</b>	That part of a Mineral Resource for which tonnage, grade and mineral content can be estimated with a low level of confidence. It is inferred from geological evidence and assumed but not verified geological and/or grade continuity. It is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill-holes which may be limited or of uncertain quality and reliability
<b>ISO 14000</b>	International standards for organisations to implement sound environmental management systems
<b>Lock-up gold</b>	Gold trapped as a temporary inventory within a processing plant, or sections thereof, typically milling circuits
<b>LTIFR</b>	Lost-Time Injury Frequency Rate, expressed in million man-hours worked

<b>Measured Mineral Resource</b>	That part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of confidence. It is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes. The locations are spaced closely enough to confirm geological and grade continuity
<b>Milling</b>	A general term used to describe the material size reduction process in which crushed ore is ground in a rotating grinding mill, using some form of grinding media (e.g. steel balls) prior to being subjected to physical or chemical treatment to extract the valuable metals to a concentrate or finished product
<b>Mine Health and Safety Act (“MHSA”)</b>	The South African Mine Health and Safety Act, No 29 of 1996
<b>Mineralised</b>	Rock in which minerals have been naturally introduced
<b>Mineral Reserve</b>	A “Mineral Reserve” is the economically mineable material derived from a Measured or Indicated Mineral Resource or both. It includes diluting and contaminating materials and allows for losses that are expected to occur when the material is mined. Appropriate assessments to a minimum of a pre-feasibility study for a project and a life-of-mine plan for an operation must have been completed, including consideration of, and modification by, realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors (the modifying factors). Such modifying factors must be disclosed
<b>Mineral Resource</b>	A ‘Mineral Resource’ is a concentration or occurrence of material of economic interest in or on the earth’s crust in such form, quality and quantity that there are reasonable and realistic prospects for eventual economic extraction. The location, quantity, grade, continuity and other geological characteristics of a Mineral Resource are known, or estimated from specific geological evidence, sampling and knowledge interpreted from an appropriately constrained and portrayed geological model. Mineral Resources are subdivided, and must be so reported, in order of increasing confidence in respect of geoscientific evidence, into Inferred, Indicated or Measured categories
<b>Mining Face</b>	The end of a development end, drift, cross-cut or stope at which work is taking place
<b>Net cash flow</b>	Cash flow from operating activities less net capital expenditure and environmental payments
<b>Normal fault</b>	Fault in which the hanging wall moves downward relative to the footwall, under extensional tectonic conditions
<b>Nugget effect</b>	A measure of the randomness of the grade distribution within a mineralised zone
<b>NUM</b>	National Union of Mine Workers
<b>OHSAS</b>	Management system standards, developed in order to facilitate the integration of quality and occupational health and safety management systems by organisations
<b>Payshoot</b>	Linear to sublinear zone within a reef for which gold grades or accumulations are predominantly above the cut-off grade
<b>Pillar</b>	Rock left behind to help support the excavations in an underground mine
<b>Pre-Feasibility Study</b>	A preliminary design and costing study of the short-listed preferred mining and processing option(s) for the development of a mineral project in which appropriate assessments have been made of realistically assumed geological, mining, metallurgical, economic, marketing, legal, environmental, social, governmental, engineering, operational and all other modifying factors, which are considered in sufficient detail to demonstrate at the time of reporting that extraction is reasonably justified (economically mineable) and the determined assumptions and parameters reasonably serve as the basis for potential declaration of Mineral Reserves
<b>Probable Mineral Reserve</b>	The economically mineable material derived from a Measured and/or Indicated Mineral Resource. It is estimated with a lower level of confidence than a Proved Mineral Reserve. It is inclusive of diluting materials and allows for losses that may occur when the material is mined. Appropriate assessments, to a minimum of a Pre-feasibility Study (PFS) for a project, have typically been carried out, including consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified

## GLOSSARY OF TERMS (continued)

<b>Project capital</b>	Capital expenditure that is associated with specific projects
<b>Proved Mineral Reserve</b>	The economically mineable material derived from a Measured Mineral Resource. It is estimated with a high level of confidence. It is inclusive of diluting materials and allows for losses that may occur when the material is mined. Appropriate assessments, to a minimum of a Pre-Feasibility Study (PFS) for a project, have been typically carried out, including consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified
<b>Reef</b>	A general term for metalliferous mineral deposit (gold) within a geological zone or unit
<b>Remuneration Report</b>	<p>The term Executive Directors refers to the CEO and the CFO, who are members of the Board of Gold Fields Limited</p> <p>The term Executive Committee or Executives refers to the Gold Fields Limited Executive Committee, which for purposes of King IV™ is the executive management of the Company. The Executive Committee is made up of the CEO, CFO, the Corporate Executive Vice Presidents (“EVPs”) and the Regional EVPs</p> <p>Corporate EVPs refers to those members of the Executive Committee who are based at the Corporate Office of the Company based in Sandton, Johannesburg, South Africa</p> <p>Regional EVPs are those members of the Executive Committee who are heads of their respective regions, namely South Africa, West Africa, Americas and Australia</p> <p>LTIP – Long-Term Incentive Plan LTI – Long-Term Incentive</p> <p>MSR – Minimum Shareholding Requirements STI – Short Term Incentive Plan</p> <p>RemCo – Remuneration Committee BSC – Balance Scorecard</p> <p>GRP – Gross Remuneration Package BRP – Base Rate of Pay</p> <p>MSR – Minimum Shareholding Requirement RexCo – Regional Executive Committee EVP – Executive Vice President</p> <p>ROE – Rate of exchange CEO – Chief Executive Officer CFO – Chief Financial Officer</p> <p>TSR – Absolute and Relative Total Shareholder Return FCFM – Free Cash-Flow Margin</p> <p>ExCo – Executive Committee NED – Non-Executive Director</p>
<b>SADC</b>	Southern African Development Community
<b>SAMREC Code</b>	The South African code for the Reporting of Exploration results, Mineral Resources and Mineral Reserves (the SAMREC Code) 2016 Edition
<b>Seismic</b>	Earthquake or earth vibration including from sources occurring naturally and artificially induced by mining operations
<b>Shaft</b>	An opening cut downwards from the surface for transporting personnel, equipment, supplies, ore and waste
<b>Shear</b>	A deformation resulting from stresses that cause contiguous parts of a body of rock to slide relative to each other in a direction parallel to their plane of contact
<b>Stope</b>	The working area from which ore is extracted in an underground mine
<b>Stripping</b>	The process of removing overburden or waste rock to expose ore
<b>Stripping ratio</b>	The ratio of waste tonnes to ore tonnes mined, calculated as total tonnes mined less ore tonnes mined, divided by ore tonnes mined
<b>Stratigraphy</b>	The science of rock strata, including arrangement according to geographical location lithological composition, geophysical and geochemical and chronological order of sequence
<b>Strike</b>	Direction or trend of geological structures such as bedding or fault planes defined by the intersection with the horizontal plane and is always perpendicular to the dip direction

<b>Subvertical shaft</b>	An opening cut below the surface downwards from an established surface shaft
<b>Surface sources</b>	Ore sources, usually dumps, tailings dams and stockpiles, located at the surface
<b>TEBA</b>	The Employment Bureau of Africa
<b>Tertiary shaft</b>	An opening cut below the surface downwards from an established subvertical shaft
<b>Trade union</b>	An association of employees whose principal purpose is to regulate relations between employees and the Company, which has been registered; whose officials have been elected to represent the interests of employees within the workplace; and which is recognised for collective bargaining by the Company

#### Abbreviations and units

<b>ABET</b>	Adult Basic Education and Training
<b>ADS</b>	American Depository Shares
<b>AIDS</b>	Acquired Immune Deficiency Syndrome
<b>ARC</b>	Assessment and Rehabilitation Centres
<b>ART</b>	Antiretroviral therapy
<b>A\$</b>	Australian Dollar
<b>CBO</b>	Community-based organisation
<b>CIL</b>	Carbon-in-leach

<b>HBC</b>	Home-based care
<b>HDSA</b>	Historically disadvantaged South African
<b>HIV</b>	Human immunodeficiency virus
<b>LoM plan</b>	Life-of-mine plan
<b>LTIFR</b>	Lost-Time Injury Frequency Rate, quoted in million man-hours
<b>MCF</b>	Mine Call Factor
<b>NGO</b>	Non-governmental organisation
<b>NUM</b>	National Union of Mineworkers
<b>NYSE</b>	New York Stock Exchange
<b>OHC</b>	Occupational Health Centre
<b>OT</b>	Occupational therapy

## GLOSSARY OF TERMS (continued)

<b>PFS</b>	Pre-Feasibility Study
<b>PHC</b>	Primary health clinic
<b>PPI</b>	Producer price index
<b>SABC</b>	SAG Milling (with pebble crushing) followed by Ball Milling (with hydrocyclones)
<b>SAG</b>	Semi-Autogenous Grinding
<b>SAMREC</b>	South African code for Reporting of Exploration Results, Mineral Resources and Mineral Reserves
<b>SEC</b>	United States Securities Exchange Commission
<b>STI</b>	Sexually transmitted infection
<b>TB</b>	Tuberculosis
<b>TEC</b>	Total employees costed
<b>UASA</b>	United Association of South Africa (a labour organisation)
<b>VCT</b>	Voluntary counselling and testing (for HIV)
<b>WAD CN</b>	Weak acid dissociable cyanide
<b>cm</b>	centimetre
<b>cm.g/t</b>	gold accumulation
<b>g</b>	gram
<b>g/t</b>	grams per metric tonne – gold or silver grade
<b>ha</b>	hectare
<b>kg</b>	kilogram
<b>km</b>	kilometre
<b>koz</b>	thousand ounces
<b>kt</b>	thousand metric tonnes
<b>ktpa</b>	thousand metric tonnes per annum
<b>ktpm</b>	thousand metric tonnes per month
<b>m<sup>2</sup></b>	square metre
<b>Moz</b>	million ounces
<b>oz</b>	fine troy ounce equalling 31.10348 grams
<b>R</b>	South African Rand
<b>R/kg</b>	South African Rand per kilogram
<b>Rm</b>	million South African Rand
<b>R/t</b>	South African Rand per metric tonne
<b>t</b>	metric tonne
<b>US\$</b>	United States Dollar
<b>US\$m</b>	million United States Dollar
<b>US\$/oz</b>	United States Dollar per ounce

## GLOSSARY OF TERMS – SUSTAINABLE DEVELOPMENT

### SUSTAINABLE DEVELOPMENT

- **United Nations Global Compact** – is a United Nations initiative to encourage businesses worldwide to adopt sustainable and socially responsible policies, and to report on their implementation. The Global Compact is a principle-based framework for businesses, stating 10 principles in the areas of human rights, labour, the environment and anti-corruption. [www.unglobalcompact.org](http://www.unglobalcompact.org)
- **Global Reporting Initiative (“GRI”)** – produces one of the world’s most prevalent standards for sustainability reporting. [www.globalreporting.org](http://www.globalreporting.org)
- **International Council on Mining and Metals (“ICMM”)** – CEO-led organisation of mining companies that seeks to continually entrench best practice with regard to sustainable development and to provide a platform for member companies to share experiences. [www.icmm.com](http://www.icmm.com)
- **Dow Jones Sustainability Indices (“DJSI”)** – are a family of benchmarks for investors who have recognised that sustainable business practices are critical to generating long-term shareholder value and who wish to reflect their sustainability convictions in their investment portfolios. [www.robecosam.com/csa/indices/djsi-index-family.html](http://www.robecosam.com/csa/indices/djsi-index-family.html)
- **Johannesburg Stock Exchange (“JSE”)** – was formed in 1887. It offers five financial markets: Equities, Bonds, Financial, Commodity and Interest Rate Derivatives. [web.jse.co.za](http://web.jse.co.za)

### HEALTH, SAFETY AND WELLBEING

- **Total Recordable Injury Frequency Rate (“TRIFR”)**  $TRIFR = (Fatalities + Lost Time Injuries + Restricted Work Injuries + Medically Treated Injuries) \times 1,000,000 / \text{number of hours worked}$ .
- A **Lost Time Injury (“LTI”)** is a work-related injury resulting in the employee or contractor being unable to attend work for a period of one or more days after the day of the injury. The employee or contractor is unable to perform any of his/her duties.
- A **Restricted Work Injury (“RWI”)** is a work-related injury sustained by an employee or contractor which requires medical treatment and results in the employee or contractor being unable to perform one or more of their routine functions for a full working day, from the day after the injury occurred. The employee or contractor can still perform some of his/her duties.
- A **Medically Treated Injury (“MTI”)** is a work-related injury sustained by an employee or contractor which does not incapacitate that employee and who, after having received medical treatment, is deemed fit to immediately resume his/her normal duties on the next calendar day, immediately following the treatment or re-treatment.
- A **Serious Injury** is an injury that incurs 14 or more days lost and results in:
  - A fracture of any bone (excluding hairline fractures and fractures of fingers, toes or nose);
  - Internal haemorrhage;
  - Head trauma (including concussion, loss of consciousness) requiring hospitalisation;
  - Loss of all or part of a limb (excluding bone dressing to facilitate medical treatment of injured fingers and toes);
  - Permanent loss of function and/or permanent disability such as hearing loss or damage to lung function;
  - Permanent disfigurement where the injury has resulted in the appearance of a person being deeply and persistently harmed medically and that is likely to lead to psychosocial problems
- A **Serious Potential Incident (“SPI”)** is any workplace related incident that has the potential for the maximum credible outcome to result in:
  - a Fatality, or
  - is Reportable to the Regulator, or
  - is a Serious Injury, or
  - a Chronic Illness.
- **Duration Rate** is the average days lost per LTI.  $\text{Duration Rate} = \text{Days Lost} / \text{Number of Lost Time Injuries}$ .
- **Severity Rate** is a measure of the severity of LTIs.  $\text{Severity Rate} = (\text{Days lost to LTIs}) \times 1,000,000 / \text{hours worked}$
- **Safety Engagement Rate (“SER”)** is the number of safety engagements per 1,000 hours worked. Safety engagements are defined by each region and include defined safety conversations between a leader and a worker or a group of workers in the workplace and observation and testing in the field of a system or process designed to prevent fatalities.
- **OHSAS 18001** is an international voluntary standard for occupational health and safety management systems. As with other standards, it is based on the identification and control of risks and monitoring of business performance against these.
- **ISO 45001** is an international standard for occupational health and safety management systems. It is replacing OHSAS 18001 over the period 2018-2021.
- **Noise-Induced Hearing Loss (“NIHL”)** is a disorder that results from exposure to high-intensity sound, especially over a long period of time.
- **Diesel particulate matter (“DPM”)** is a complex mixture of solids and liquids. The particles in diesel exhaust are of special concern because, due to their respirable size, they can penetrate deep into human lungs. The composition of DPM includes many species that are known for their adverse health effects, including several carcinogens. There is no global consensus on diesel particulate exposure regulations.
- **Silicosis** is a form of occupational lung disease caused by inhalation of crystalline silica dust, and is marked by inflammation and scarring in the form of nodular lesions in the upper lobes of the lungs.
- **Chronic Obstructive Airway Disease (“COAD”)** refers to chronic bronchitis and emphysema, a pair of commonly co-existing diseases of the lungs in which the airways become narrowed.
- **Highly active antiretroviral therapy (“HAART”)** – Treatment of people infected with HIV, to suppress the growth of HIV, the retrovirus responsible for AIDS. The standard treatment consists of a combination of at least three drugs.

### ENVIRONMENT

- **ISO 14001** is an international voluntary standard for environmental management systems. This is one standard in the ISO 14000 series of international standards on environmental management.
- **ISO 50001** is an international standard for energy management systems.

## GLOSSARY OF TERMS – SUSTAINABLE DEVELOPMENT (continued)

- **Environmental incidents** – these are incidents that are classified in accordance with a system designed by Gold Fields (based on the GRI definition) that classifies the incident based on its severity. Incidents are classified as follows:
  - Not classified – Incidents below the level 1 classification threshold and with no environmental impact: No classification or administrative action required, but it can be logged.
  - Level 1 environmental incident – Incident that involves minor non-conformance that results in minimal or no environmental impact.
  - Level 2 environmental incident – Incident that involves minor non-conformance that results in short-term, limited and non-ongoing adverse environmental impacts.
  - Level 3 environmental incident – Incident that results in limited non-conformance or non-compliance. The non-compliance results in ongoing (as per the timeframes defined in Gold Fields Guidelines), but limited environmental impact.
  - Level 4 environmental incident – Incident resulting in significant non-conformance or non-compliance with significant short-term or medium-term environmental impact. Such events are likely to be operation-threatening in isolation and cumulatively (i.e. if the incidents are repeated) is very likely to threaten a licence to operate or social licence to operate. In addition, such incidents also have the potential to cause reputational damage.
  - Level 5 environmental incident – Incident that results in major non-conformance or non-compliance. The non-compliance or non-conformance results in either catastrophic short-term impact or medium to long-term environmental impact. Company or operation threatening implications and potential major damage to the Company's reputation are almost inevitable.

### WATER MANAGEMENT

- **Water withdrawal:** The sum of all water drawn into Gold Fields' operations from all sources for any use/impact.
- **Recycled water:** Processing used water/waste water through the same or another cycle at the same facility. The water/waste water is treated before being recycled and reused.
- **Reused water:** Water/waste water that is reused without treatment at the same facility or at another of Gold Fields' operations.
- **Percentage of water recycled or reused:** Water recycled/reused/total water used in process  $5 \times 100$ .
- **Total water used in process:** Water withdrawal + water recycled/reused.
- **Acid mine drainage ("AMD")** or acid rock drainage ("ARD"), collectively called acid drainage ("AD") is formed when certain sulphide minerals in rocks are exposed to oxidising conditions, such as the presence of oxygen, combined with water. AD can occur under natural conditions or as a result of the sulphide minerals that are exposed to oxidation during mining or during storage in waste rock dumps, ore stockpiles or tailings dams. The acidic water that forms usually contains iron and other metals if they are contained in the host rock.

### SUPPLY CHAIN MANAGEMENT AND MATERIAL STEWARDSHIP

**International Cyanide Management Code ("ICMC")** – is a voluntary industry programme for the manufacture, transport and use of cyanide in gold production. It focuses on the safe management of cyanide and cyanidation mill tailings and leach solutions. Companies that adopt the Code must have their mining operations that use cyanide to recover gold audited by an independent third party to determine the status of Code implementation, and must use certified manufacturers and transporters.

### SOCIAL RESPONSIBILITIES

**Socio-economic development spend ("SED")** – Payments made to communities and community investments that are not inherent to the functioning of the operation. This may include payments related to infrastructure, health and well-being, education and training, local environment, scholarships and donations. This definition is aligned to the World Gold Council ("WGC") definition.

**Host communities** – are identified by each operation for the purpose of securing our mining licences – both legal and social. These communities are directly affected by and have an expectation regarding our activities.

**Local Economic Development ("LED")** – refers to initiatives and monies disbursed to uplift socio-economic conditions in the communities in which we operate, in particular job creation and enterprise development.

### OUR PEOPLE

**HDSA** – Historically disadvantaged South Africans.

### ENERGY AND CARBON MANAGEMENT

**Greenhouse gas emission ("GHG emission")** – Gas which absorbs outgoing terrestrial radiation, such as methane, CFCs and carbon dioxide.

**Scope 1 carbon dioxide equivalent ("CO<sub>2</sub>e") emissions** – are those directly occurring from sources that are owned or controlled by the institution, including: on-site stationary combustion of fossil fuels; mobile combustion of fossil fuels by company-owned/controlled vehicles; and fugitive emissions. Fugitive emissions result from intentional or unintentional releases of GHGs.

**Scope 2 CO<sub>2</sub>e emissions** – are indirect emissions generated in the production of electricity purchased by the company.

**Scope 3 CO<sub>2</sub>e emissions** – are all the other indirect emissions that are a consequence of the activities of the institution, but occur from sources not owned or controlled by the institution such as commuting, air travel, waste disposal; embodied emissions from extraction, production and transportation of purchased goods; outsourced activities; contractor-owned vehicles; and line loss from electricity transmission and distribution.

**Equivalent carbon dioxide ("CO<sub>2</sub>e")** – measures for describing how much global warming a given type and amount of greenhouse gas may cause, using the functionally equivalent amount or concentration of carbon dioxide ("CO<sub>2</sub>") as the reference.

# INDEPENDENT REPORTING ACCOUNTANT'S ASSURANCE REPORT ON THE COMPILATION OF PRO FORMA FINANCIAL INFORMATION

To the Directors of Gold Fields Limited

## REPORT ON THE ASSURANCE ENGAGEMENT ON THE COMPILATION OF PRO FORMA FINANCIAL INFORMATION INCLUDED IN THE GOLD FIELDS ANNUAL FINANCIAL REPORT INCLUDING GOVERNANCE REPORT 2020

We have completed our assurance engagement to report on the compilation and presentation of certain non-IFRS financial measures of Gold Fields Limited (the "Company") by the directors, which information constitutes pro forma financial information in terms of the JSE Limited ("JSE") Listings Requirements. The pro forma financial information, as set out in the Gold Fields Annual Financial Report including Governance Report 2020 (the "Annual Report"), consist of normalised profit attributable to owners of the parent on page 92, normalised profit per share on page 92, adjusted EBITDA on page 209, adjusted free cash flow margin on page 72, all-in sustaining costs and total all-in-costs on page 62, net debt (including and excluding lease liabilities) on pages 122 and 209, sustaining and non-sustaining capital expenditure on page 63 and cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares on page 114. The applicable criteria on the basis of which the directors have compiled the pro forma financial information are specified in the JSE Listings Requirements and described in the Annual Report.

The pro forma financial information has been compiled by the directors for the following purpose:

- normalised profit attributable to owners of the parent and normalised profit per share is considered an important measure by the Company of the profit realised in the ordinary course of business. In addition, it forms the basis of the dividend pay-out policy;
- adjusted EBITDA is required to be determined in terms of loan and revolving credit facilities agreements to evaluate compliance with debt covenants;
- adjusted free cash flow margin is used as a key metric in the determination of the long-term incentive plan;
- all-in sustaining costs and total all-in-costs are presented to provide transparency into the costs associated with producing and selling an ounce of gold and is a common measure presented within the mining industry;
- sustaining and non-sustaining capital expenditure is used in the determination of all-in-sustaining costs and total all-in-costs;
- net debt (including and excluding lease liabilities) is used in the ratio to monitor the capital of the group; and
- cash flow from operating activities less net capital expenditure, environmental payments, lease payments and redemption of Asanko preference shares is considered a relevant measure by the Company.

As part of this process, information about the Company's financial position and financial performance has been extracted by the directors from the Company's preliminary condensed consolidated financial statements for the year ended 31 December 2020, on which a review report has been published.

### Directors' responsibility

The directors of the Company are responsible for compiling the pro forma financial information on the basis of the applicable criteria specified in the JSE Listings Requirements and described in the Annual Report.

### Our independence and quality control

We have complied with the independence and other ethical requirements of Sections 290 and 291 of the Independent Regulatory Board for Auditors' *Code of Professional Conduct for Registered Auditors (Revised January 2018)* and parts 1 and 3 of the Independent Regulatory Board for Auditors' *Code of Professional Conduct for Registered Auditors (Revised November 2018)* (together the IRBA Codes), which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The IRBA Codes are consistent with the corresponding sections of the International Ethics Standards Board for Accountants' *Code of Ethics for Professional Accountants* and the International Ethics Standards Board for Accountants' *International Code of Ethics for Professional Accountants (including International Independence Standards)* respectively.

### Reporting accountant's responsibility

Our responsibility is to express an opinion about whether the pro forma financial information has been compiled, in all material respects, by the directors on the basis of the applicable criteria specified in the JSE Listings Requirements and described in the Annual Report based on our procedures performed.

We conducted our engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3420, *Assurance Engagements to Report on the Compilation of pro forma financial information Included in a Prospectus* issued by the International Auditing and Assurance Standards Board. This standard requires that we plan and perform our procedures to obtain reasonable assurance about whether the pro forma financial information has been compiled, in all material respects, on the basis specified in the JSE Listings Requirements.

For purposes of this engagement, we are not responsible for updating or reissuing any reports or opinions on any historical financial information used in compiling the pro forma financial information, nor have we, in the course of this engagement, performed an audit or review of the financial information used in compiling the pro forma financial information.

The purpose of pro forma financial information included in the Annual Report is solely to provide users with relevant information and measures used by the Company to assess performance. Accordingly, we do not provide any assurance that the actual financial information would have been as presented.

## INDEPENDENT REPORTING ACCOUNTANT'S ASSURANCE REPORT ON THE COMPILATION OF PRO FORMA FINANCIAL INFORMATION (continued)

A reasonable assurance engagement to report on whether the pro forma financial information has been compiled, in all material respects, on the basis of the applicable criteria involves performing procedures to assess whether the applicable criteria used by the directors in the compilation of the pro forma financial information provide a reasonable basis for presenting the financial information on a pro forma basis, and to obtain sufficient appropriate evidence about whether:

- the related pro forma adjustments give appropriate effect to those criteria; and
- the pro forma financial information reflects the proper application of those adjustments to the unadjusted financial information.

The procedures selected depend on our judgment, having regard to our understanding of the nature of the Company, the event or transaction in respect of which the pro forma financial information has been compiled, and other relevant engagement circumstances.

Our engagement also involves evaluating the overall presentation of the pro forma financial information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Opinion

In our opinion, the pro forma financial information has been compiled, in all material respects, on the basis of the applicable criteria specified by the JSE Listings Requirements and described in the Annual Report.
