DIRECTORS' RESPONSIBILITY FOR FINANCIAL REPORTING

The Board of Sanlam Limited takes responsibility for the integrity, objectivity and reliability of the group and company Annual Financial Statements of Sanlam Limited in accordance with International Financial Reporting Standards. Adequate accounting records have been maintained. The Board endorses the principle of transparency in financial reporting. The responsibility for the preparation and presentation of the Annual Financial Statements has been delegated to management.

The responsibility of the external auditors, Ernst & Young Inc., is to express an independent opinion on the fair presentation of the financial statements based on their audit of Sanlam Limited and the Group. The Audit, Actuarial and Finance committee has satisfied itself that the external auditors were independent of the company during the period under review.

The Audit, Actuarial and Finance committee has confirmed that effective systems of internal control and risk management are being maintained. There were no breakdowns in the functioning of the internal financial control systems during the year, which had a material impact on the Sanlam Limited group or company Annual Financial Statements. The Board is satisfied that the annual financial statements fairly present the financial position, the results of operations and cash flows in accordance with International Financial Reporting Standards (IFRS) and supported by reasonable and prudent judgements consistently applied.

The Board of Sanlam Limited takes responsibility for the integrity, objectivity and reliability of the Shareholders' Information included in the Integrated Report. The responsibility for the preparation and presentation of the Shareholders' Information had been delegated to management.

The responsibility of the external auditors, Ernst & Young Inc., is to express an independent opinion on the preparation of the Shareholders' Information.

A full description of how the Audit, Actuarial and Finance Committee carried out its functions is included in the Corporate Governance report online.

The Board is of the opinion that Sanlam Limited is financially sound and operates as a going concern. The Annual Financial Statements have accordingly been prepared on this basis.

The Annual Financial Statements, the Corporate Governance report, the Remuneration report and the Shareholders' Information on pages 173 to 236 of the Integrated Report were approved by the Board and signed on its behalf by:

Johan van Zyl
Chair

Cape Town
6 March 2019

Ian Kirk
Group Chief Executive

CERTIFICATE BY COMPANY SECRETARY

In my capacity as Company Secretary, I hereby certify, in terms of the Companies Act, that for the year ended 31 December 2018, the company has lodged with the Registrar of Companies all such returns as are required of a public company in terms of this Act, and that all such returns are, to the best of my knowledge and belief, true, correct and up to date.

Sana-Ullah Bray
Company Secretary

6 March 2019

DIRECTORS' REPORT

For the year ended 31 December 2018

NATURE OF BUSINESS

The Sanlam Group is one of the largest established financial services groups in Africa. Its core activities are set out in the Integrated Report.

Sanlam Limited is a public company incorporated in terms of the Companies Act No 71 of 2008, as amended, in South Africa and listed on the JSE Limited and the Namibian Stock Exchange.

CORPORATE GOVERNANCE

The Board of Sanlam endorses the Code of Corporate Practice and Conduct recommended in the King IV Report on Corporate Governance™ for South Africa, 2016 (King IV™)¹. Disclosures with regard to compliance with the Code are provided in the Corporate Governance report.

GROUP RESULTS

Profit attributable to shareholders increased from R10 923 million in 2017 to R11 627 million in 2018, largely due to a robust operational performance and a deemed profit on disposal of associated companies and subsidiaries of some R3,1 billion recognised in terms of IFRS upon associated companies becoming subsidiaries. The acquisition of the remaining 53% stake in Saham Finances was the largest contributor to the deemed profit. Further details regarding the Group's results and prospects are included in the Financial Review in the Integrated Report. The information in the Corporate Governance and Remuneration reports, requiring disclosure in the Directors' report in terms of the Companies Act and JSE Listings Requirements, has been audited. The holding company's interest in the after tax profit of the Group subsidiaries, summarised per cluster, is set out in the shareholder's fund income statement on page 200 of the Integrated Report.

SHARE CAPITAL

The issued ordinary share capital of the Company is 2 232 million shares. Refer to page 96 for further information.

DIVIDEND

The Board has declared a normal cash dividend of 312 cents per share (2018: normal dividend of 290 cents), payable on 15 April 2019, to shareholders registered on 9 April 2019. All payments through electronic bank transfer will take place on this date.

SUBSIDIARIES

Details of the Company's principal subsidiaries are set out on page 144.

DIRECTORS' INTERESTS IN CONTRACTS

No material contracts involving directors' interests were entered into in the year under review.

INTEREST OF DIRECTORS AND OFFICERS IN SHARE CAPITAL

Details of the shareholding by directors at the date of this report are provided in the online Remuneration Report on pages 33 and 34.

DIRECTORS AND SECRETARY

Particulars of the directors and Company Secretary at the date of this report, as well as changes in directorships, are set out on pages 164, 166 to 172, and 248 of the Integrated Report. Also refer to the online Governance Report.

SUBSEQUENT EVENTS

No other material facts or circumstances have arisen between the date of the statement of financial position and this report which materially affects the financial position of the Sanlam Limited Group at 31 December 2018 as reflected in these financial statements.

APPROVAL OF ANNUAL FINANCIAL STATEMENTS

The directors have approved the annual financial statements as reflected on page 1, including the certificate by the Company Secretary on page 2, the Audit committee report for the 2018 financial year on page 29 of the online Governance Report and the analysis of shareholders on page 240 of the Integrated Report.

NOTICE IN TERMS OF SECTION 45(5) OF THE COMPANIES ACT, 2008 (THE ACT)

The Company is from time to time, as an essential part of conducting the business of the Sanlam Group, required to provide financial assistance to Group companies as part of its day-to-day operations in the form of loan funding, guarantees or general financial assistance as contemplated in section 45 of the Act. In accordance with section 45(5) of the Act this serves to give notice that the Sanlam Board, in line with existing practice, approved that the Company may, in accordance with and subject to the provisions of section 45 of the Act and in terms of the special resolution passed at the Company's annual general meeting in 2018, provide such direct or indirect financial assistance to related and inter-related companies and corporations as described in section 45 of the Act. The amount and format of financial assistance which may be granted pursuant to the resolution is subject to on-going review by the Sanlam Board and may in total exceed the reporting threshold of 0,1% of the Sanlam Group's net asset value provided for in the Act.

INDEPENDENT AUDITOR'S REPORT ON THE CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS

To the Shareholders of Sanlam Limited Opinion

We have audited the consolidated and separate financial statements of Sanlam Limited set out on pages 11 to 148, which comprise the statements of financial position as at 31 December 2018, and the statements of comprehensive income, statements of changes in equity and statements of cash flows for the year then ended, and the notes, comprising a summary of significant accounting policies and other explanatory information, including the 2018 Remuneration Report, pages 8 to 34 which is available on the Sanlam Limited website.

In our opinion, the consolidated and separate financial statements present fairly, in all material respects, the consolidated and separate financial position of Sanlam Limited as at 31 December 2018, and its consolidated and separate financial performance and its consolidated and separate cash flows for the year then ended in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa.

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Consolidated and Separate Financial Statements section of our report. We are independent of Sanlam Limited in accordance with the Independent Regulatory Board for Auditors Code of Professional Conduct for Registered Auditors (IRBA Code), the International Ethics Standards Board for Accountants Code of Ethics

for Professional Accountants (IESBA code) and other independence requirements applicable to performing the audit of Sanlam Limited. We have fulfilled our other ethical responsibilities in accordance with the IRBA Code, the IESBA Code, and in accordance with other ethical requirements applicable to performing the audit of Sanlam Limited. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key Audit Matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the consolidated and separate financial statements of the current period. These matters were addressed in the context of our audit of the consolidated and separate financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the consolidated and separate financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the consolidated and separate financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying consolidated and separate financial statements.

Key Audit Matter	How the matter was addressed in the audit
------------------	---

1. Valuation of insurance contract liabilities

We considered the valuation of insurance contract liabilities to be significant to the audit of the Sanlam Limited Group (Sanlam or the Group). Specifically, actuarial assumptions and methodologies involve judgements about future events, both internal and external to the Group, for which small changes can result in a material impact to the valuation of insurance contract liabilities. Additionally, the valuation of insurance contract liabilities is dependent on the quality, integrity and accuracy of the data used in the valuations.

Refer to sections 1.a and 1.b below.

Key Audit Matter	How the matter was addressed in the audit
<p>1. Valuation of insurance contract liabilities (continued)</p> <p>We have therefore identified the following areas of focus in relation to the valuation of insurance contract liabilities:</p> <p>a) Appropriateness of actuarial assumptions, models and methodology; and</p> <p>b) Data processes and controls relevant to the actuarial valuation.</p> <p>Refer to the Policy liabilities and profit entitlement section of the accounting policies (page 61 to 63), Note 24.2 of the Group financial statements (Critical accounting estimates and judgements), (page 114 to 115), and Note 14 of the Group financial statements (page 99 to 104).</p>	<p>Refer to sections 1.a and 1.b below.</p>
<p>1a Appropriateness of actuarial assumptions, models and methodology</p> <p>Actuarial assumptions and methodologies reflected in policyholder liabilities are subject to a considerable level of judgement. The operational assumptions are informed by actual experience, market experience and practice, and expectations as to future trends. Economic assumptions are typically based on latest market conditions and are set in accordance with relevant guidance and the Sanlam Group approved policy. The assumptions that we consider to have the most significant impact on the actuarial valuations are:</p> <ul style="list-style-type: none"> • Mortality, longevity, disability and morbidity; • Persistency; • Expenses; • Risk discount rates; and • Allowance for credit defaults. <p>The integrity and appropriateness of models and methodology are also considered to be critical in the overall valuation of insurance contract liabilities.</p>	<p>Our audit of these actuarial assumptions, models and methodology applied in the valuation of insurance liabilities, <i>inter alia</i>, included the following audit procedures that were executed with the assistance of our actuarial experts, across the areas considered material:</p> <ul style="list-style-type: none"> • We assessed the valuation methodology and assumptions for compliance with the latest actuarial guidance, legislation and approved company policy. • We assessed the design and operating effectiveness of the key controls of the actuarial valuation process for the setting and updating of actuarial assumptions and the process for model and methodology changes; • We focused our analysis on management’s key assumptions around mortality, longevity, disability, morbidity, persistency and expenses and assessed the results of management’s experience analyses; • We assessed the economic basis, including allowances for credit risk and the risk discount rates, by independently validating the risk-free yield curve, product yield curves and the credit spreads; • We confirmed, on a sample basis, that model and methodology changes have been appropriately implemented by comparing the impacts of these changes to our own calculations of what we would expect the impact to be; • We evaluated the assumptions and methodology against expectations based on our knowledge of the Group, industry practice, and regulatory and reporting requirements. This included an independent evaluation of the sensitivities of the models to various changes in inputs; • We evaluated the key sources of profit and loss and assessed management’s analysis of movements in insurance contract liabilities and obtained evidence to support large or unexpected movements;

INDEPENDENT AUDITOR'S REPORT ON THE CONSOLIDATED AND SEPARATE
FINANCIAL STATEMENTS (continued)

Key Audit Matter	How the matter was addressed in the audit
1a Appropriateness of actuarial assumptions, models and methodology (continued)	<ul style="list-style-type: none">• We evaluated and performed procedures over management's modelling of Investment Guarantee Reserves in terms of the applicable actuarial guidance notes;• We considered the level of margins held, management's justification for holding these margins and how these will be released in future;• We performed procedures over the calculation of the non-participating annuity liability, to consider whether the minimum prescribed margin is provided and we evaluated how the provision for credit risk is being managed; and• We performed procedures over the Solvency Capital Requirements (SCR) and Minimum Capital Requirements (MCR) calculation to ensure that it is in line with the Insurance Act No. 18 of 2017 (Insurance Act), and the Prudential Standards (FSIs) issued by the Prudential Authority, and we evaluated management actions under the prevailing market conditions.
1b Data processes and controls relevant to the actuarial valuation Data is a key input into the valuation process. The calculation of insurance contract liabilities has a number of inputs, which are reliant on various processes and systems for accurate and complete data. A breakdown of these processes and systems could result in a misstatement of the value of insurance contracts.	<p>In obtaining sufficient audit evidence to assess the integrity of data used as inputs into the actuarial valuations, we, inter alia, performed the following audit procedures:</p> <ul style="list-style-type: none">• We assessed the design and operating effectiveness of the key aspects of the control environment over data integrity, including an evaluation of the effectiveness of the information technology (IT) environment over the policy administration systems and the actuarial valuation systems, together with the data extraction and conversion processes;• We performed an evaluation of the key controls over management's collection, extraction and data validation processes, which included testing of the reconciliations between the policy administration systems and the actuarial data extract from the actuarial valuation systems; and• We performed procedures to evaluate management's grouping of data for input into the actuarial valuation models.

Key Audit Matter	How the matter was addressed in the audit
<p>2. Valuation of unlisted financial instruments</p> <p>We considered the valuation of unlisted financial instruments to be significant to the audit because of the materiality thereof to the Group's Annual Financial Statements and the sensitivity thereof to the various unobservable valuation inputs, uncertain future cash flows and assumptions that require considerable judgement.</p> <p>The financial instruments we considered most complex and most sensitive to unobservable valuation inputs are private equity and unlisted debt.</p> <p>The Group also has collateralised lending, the recoverability of which was impacted by the significant decrease in the share price of Steinhoff Limited during December 2017.</p> <p>Refer to Note 24.5 of the Group financial statements (Critical accounting estimates and judgements, page 116) and Note 32 of the Group financial statements pages 125 to 133).</p>	<p>Our audit included the following audit procedures across the areas considered material:</p> <ul style="list-style-type: none"> • We assessed the design and operating effectiveness of the financial reporting controls we considered significant in the valuations and model approval process. This included the controls over the maintenance and use of credit ratings utilised in the valuations; • We assessed the valuation methodologies applied for appropriateness against generally accepted market practice; • We compared the assumptions used in the Group's models and methodologies to independent external sources where possible; • Where valuation inputs were unobservable, we involved our valuation experts to assist us in assessing these inputs; and • We independently tested the valuation of a sample from each type of financial instruments. <p>In addition to the above, our specific procedures included the following:</p> <p>Private equity:</p> <ul style="list-style-type: none"> • We considered whether the application of methodologies is consistent with generally accepted valuation methodologies and prior periods and that assumptions and inputs used are consistent, in all material respects, with the business' past performance and management business strategy, adjusted for the implicit risk of achieving this strategy under prevailing market conditions. • Where deemed appropriate, we performed an independent corroboration of the valuations to comparable entities in the market. <p>Unlisted debt:</p> <ul style="list-style-type: none"> • We evaluated the valuation inputs, in particular, the construction of the risk-free curve, liquidity and credit spreads by performing independent checks against external sources. • In respect of counter party exposure, we involved our valuation experts to assist us in considering whether credit risk has been appropriately considered and applied in the valuation at year-end.

INDEPENDENT AUDITOR'S REPORT ON THE CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS (continued)

Key Audit Matter	How the matter was addressed in the audit
2. Valuation of unlisted financial instruments (continued)	Collateralised lending: <ul style="list-style-type: none">• We considered the original loan agreements, as well as any subsequent amendments to the agreements, as well as guarantees, sessions or pledges obtained by the Group.• We considered any collateral held originally as well as any new collateral obtained, together with the impact of collateral calls and/or other settlements effected prior to year-end.• Through enquiry we obtained information on known legal processes instituted and/or processes followed with other creditors.• We obtained evidence for all material matters considered in setting the recoverable amount of the collateralised lending, including evidence of collateral held, and subordination agreements where applicable.• We conducted searches of publicly available information in order to ascertain whether there are any other relevant facts or circumstances that should be considered when evaluating the Group's claim on assets to support outstanding balances.• We involved our valuation experts to consider the valuation of the material items of collateral held.• We performed subsequent events procedures up to the date of our audit report.
3. Acquisition of Saham Finances S.A. <p>On 9 October 2018, all conditions precedent were fulfilled relating to the transaction whereby the Sanlam Limited Group acquired a further interest of 53.37% in Saham Finances S.A, to take the Group's effective ownership to 100%. The previous holding of 46.63% in Saham Finances S.A , which was equity accounted before, was deemed to be disposed of at the fair value of this holding at the effective date of the transaction.</p> <p>The new holding has been recognised at a purchase consideration equal to the cost of the 53.37% plus the fair value of the 46.63% disposed, and allowing for the gains on the cash flow hedge on the transaction.</p> <p>International Financial Reporting Standard (IFRS) 3 Business Combinations (Revised) requires that a purchase price allocation be performed, which requires that the identifiable assets and liabilities of Saham Finances S.A be recognised at their fair values on the date of acquisition, including any identified intangibles assets. The difference between the identified net assets acquired and the purchase consideration is recognised as goodwill.</p>	Our audit procedures included, amongst others: <ul style="list-style-type: none">• We evaluated the appropriateness of the acquisition accounting and the disclosure for compliance with IFRS 3. We reviewed the key contracts and evaluated whether the accounting treatment of the transaction takes into account the contractual stipulations.• In assessing the valuation and completeness of the recognised intangible assets, the audit team together with the EY valuation experts performed the following procedures:<ul style="list-style-type: none">• We challenged the valuation approach methodology and assumptions (such as discount and royalty rates) applied by management to value the intangibles. We also assessed the appropriateness of the valuation models of the business plans underlying the measurement. This involved assessing the mathematical accuracy of the valuation models and also evaluating the expectations of future revenue based on our understanding of the locations in which the Saham Finances S.A group operates.

Key Audit Matter**How the matter was addressed in the audit**

3. Acquisition of Saham Finances S.A. (continued)

The Sanlam Group recognised identifiable assets of R58.572 million, intangible assets of R7 613 million, and a resultant goodwill of R15 421 million (after the impact of the hedge is taken into account). Refer to Note 30 of the Group financial statements on page 124).

The identification and valuation of the acquired net assets can have a material impact on the consolidated financial statements and is an area that involves judgement. Due to the size and the non-routine nature of this transaction, including the judgement involved in respect of the identification, valuation and useful lives of the intangible assets, we consider this a key audit matter for our audit (refer to note 3.2 on page 72).

- We performed independent recalculations and validations to assess the reasonability of the valuations of the intangible assets.
- We considered the identification of intangible assets to assess the completeness of assets recognised.
- For intangible assets raised on life insurance businesses, we performed procedures in respect of the embedded value calculations where we considered the actuarial assumptions, models and methodology applied in the embedded value calculations.
- For purposes of assessing the completeness of net assets taken on at acquisition date, we considered the procedures performed by the group auditors of Saham Finances S.A over the take on statement of financial position, and the outcome and findings reported as a result of their audit.
- For purposes of the 31 December 2018 results of Saham Finances S.A. that were consolidated by the Group, we considered the audit procedures performed by the group auditors of Saham Finances S.A and the outcome and findings reported as a result of their audit.
- We performed site visits on the material components and conducted oversight procedures on the Saham Finances S.A group audit as appropriate.

Other Information

The directors are responsible for the other information. The other information comprises the Integrated report, Corporate Governance Report, the Directors responsibility for financial reporting, Certificate by the Company Secretary and the Directors' Report as required by the Companies Act of South Africa.

Other information does not include the consolidated and separate financial statements and our auditor's report thereon.

Our opinion on the consolidated and separate financial statements does not cover the other information and we do not express an audit opinion or any form of assurance conclusion thereon.

In connection with our audit of the consolidated and separate financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the consolidated and separate financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed on the other information obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Directors for the Consolidated and Separate Financial Statements

The directors are responsible for the preparation and fair presentation of the consolidated and separate financial statements in accordance with International Financial Reporting Standards and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of consolidated and separate financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated and separate financial statements, the directors are responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Consolidated and Separate Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated and separate financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is

INDEPENDENT AUDITOR'S REPORT ON THE CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS (continued)

not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated and separate financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgement and maintain professional scepticism throughout the audit. We also

- Identify and assess the risks of material misstatement of the consolidated and separate financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the directors.
- Conclude on the appropriateness of the directors' use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated and separate financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated and separate financial statements, including the disclosures, and whether the consolidated and separate financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated and separate financial statements. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

We communicate with the directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the directors, we determine those matters that were of most significance in the audit of the consolidated and separate financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

In terms of the IRBA Rule published in Government Gazette Number 39475 dated 4 December 2015, we report that Ernst & Young Inc., and its predecessor firms, were appointed as joint auditors of Sanlam Limited with its incorporation in 1998. In 2006, Ernst & Young Inc. was appointed as the sole auditor of Sanlam Limited and has continuously therefore been the auditor of the company for a total of 21 years.

Ernst & Young Inc.

Capital and risk management report

Capital management

Objective

Responsible capital management and allocation is an essential component of meeting the Group's strategic objective of shared value creation for all stakeholders, including maximising shareholder value. The capital value used by the Group as the primary performance measurement base is Group Equity Value (GEV), as reported on page 16 of the Integrated Report. The management of the Group's capital base requires a continuous review of optimal capital levels, including the use of alternative sources of funding, to maximise return on GEV (RoGEV) and ensure appropriate solvency levels as a safeguard to our clients, regulators and broader society. The Group has an integrated capital and risk management approach. The amount of capital required by the various businesses is directly linked to their exposure to financial and operational risks. Accordingly, risk management is an important component of responsible capital management and allocation.

Capital allocation methodology

Group businesses are each allocated an optimal level of capital and are measured against appropriate return hurdles.

The methodology used to determine the allocation of required capital to South African covered business is aligned with the new Prudential Standards, which replaced the Financial Soundness Valuation (FSV) regime from 1 July 2018.

At the end of 2018 the Group set an appropriate level of required capital for Sanlam Life's covered business under the Prudential Standards, based on a Standard Formula Solvency Capital Requirement (SCR) targeted cover range of between 170% and 210% over a 10-year projection period. At the lower end of the range, Sanlam Life's covered business should be able to withstand two economic shock scenarios and still have SCR cover above 100%. A similar methodology was followed to set ranges for the other South African life insurers. The revised approach remains aligned with the overarching principle to set the level and nature of the supporting capital taking cognisance of minimum regulatory capital requirements, as well as economic, risk and growth considerations. For the non-South African life insurers, the Group sets supporting capital levels according to risk appetites based on applicable local rules and operational requirements.

The fair value of other Group operations includes the working capital allocated to the respective operations.

The Group's approach to ensure appropriate working capital levels in these operations is twofold:

- The Group's internal dividend policy is based on the annual declaration of all discretionary capital by subsidiaries that is not required for normal operations or expansion; and
- Performance targets are set for other Group operations based on an expected return on the fair value of the businesses, equal to their internal hurdle rates. This ensures that all non-productive working capital is declared as a dividend to the Group.

Capital management

Covered business (life insurance operations)

The Group's covered business requires significantly higher levels of allocated capital than the other Group operations. The optimisation of long term required capital is accordingly a primary focus area of the Group's capital management philosophy given the significant potential to enhance shareholder value, while maintaining appropriate solvency levels. The following main strategies are used to achieve this objective:

- Appropriate matching of assets and liabilities for policyholder solutions. This is especially important for long-duration policyholder solutions that expose the Group to interest rate risk, such as non-participating annuities.
- Due regard is given to liquidity risk management, particular where derivatives are utilised for matching purposes.
- Managing the impact of new business on capital requirements by limiting volumes of capital-intensive new business.
- The asset mix of the long-term required capital, as well as estate reserves in the policyholder portfolios also impact the overall capital requirement. The Group's balance sheet management function models the overall risk and expected return on assets, including the impact on required capital to determine the optimal asset mix in this regard.
- The optimal use of long-term debt in the Group's capital structure.
- Utilisation of capital diversification benefits, when deemed necessary, whereby the capital

requirements of insurance entities can be partly covered by investments in other Group operations, within the limits available in the particular regulatory regime.

- Management of operational risk: internal controls and various other operational risk management processes are used to reduce operational risk and commensurately the allowance for this risk in the calculation of required capital.
- The optimal use of hedges, e.g. the interest rate derivatives currently in place.
- Efficient selection of reinsurance exposures.

The Group continues to improve and further develop its capital management models and processes in line with international best practice.

Other Group operations

The performance measurement of other Group operations is based on the return achieved on the fair value of the businesses. Risk-adjusted return targets are set for the businesses to ensure that each business' return target takes cognisance of the inherent risks of the business. This approach ensures that the management teams are focused on operational strategies that will optimise the return on fair value, thereby contributing to the Group's main objective of optimising RoGEV.

Group Estate committee

The Group Estate committee, an internal management committee, is responsible for reviewing and overseeing the management of the Group's shareholders capital base (inclusive of the estate reserves) in terms of the specific strategies approved by the Board. A similar committee has been established to specifically consider the Sanlam Emerging Markets businesses.

Discretionary capital

Any capital in excess of requirements, and not optimally utilised, is identified on a continuous basis. The pursuit of structural growth initiatives has been set as the preferred application of Group capital, subject to such initiatives yielding the applicable hurdle rate and being complementary to or in support of Group strategy. Any discretionary capital not efficiently redeployed will be returned to shareholders in the most effective form.

Capital adequacy

Sanlam Group

For regulatory purposes, the Group's consolidated capital adequacy is assessed under the new Insurance Act and the relevant Prudential Standards, which gave effect to the Solvency Assessment and Management (SAM) regime from 1 July 2018.

Group capital adequacy is determined by applying the deduction and aggregation method as specified in the new Prudential Standards. Entities are included as follows:

- South African insurers: Own Funds and standard formula SCR as prescribed under the Prudential Standards.
- Non-South African insurers regulated in an equivalent jurisdiction: Own Funds and standard formula SCR as prescribed under Solvency II (at present only applicable to the United Kingdom).
- Non-South African insurers regulated in a non-equivalent jurisdiction: At 31 December 2018 Own Funds and standard formula SCR as prescribed under the Prudential Standards for all non-South African general insurers as well as material non-South African life insurers. Sanlam has applied to the Prudential Authority to use alternative calculation methods for six life participations where SAM calculations are not available. The alternative calculation methods are based on local solvency capital requirements and adjusted IFRS NAV.
- Regulated banks and credit institutions: Regulatory capital resources and capital requirements as per the Basel III framework.
- Other regulated entities: Regulated entities (other than insurers, banks and credit institutions) that have regulations prescribing capital resources and capital requirements are included at these values.
- Where no capital resources and capital requirements are prescribed: Adjusted IFRS net asset values for Own Funds and SCR equal to the equity stress under the Prudential Standards on the Own Funds.

The Sanlam Group SAM solvency cover was 215% at 31 December 2018, compared to 218% as at 31 December 2017. The solvency cover reduces from 215% to 198% after excluding the 2019 dividend payment and any discretionary capital.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The following table provides an analysis of the contribution to Group solvency per major entity grouping and quality of capital:

R million	Sanlam Limited

Sanlam Life (solo)

For regulatory purposes, capital adequacy for the South African insurance operations is measured with reference to the standard formula as specified under the Prudential Standards.

The valuation of assets and policy liabilities for prudential capital adequacy under the Prudential Standards is different to the methodology for the published IFRS results.

The following table provides a reconciliation between the IFRS shareholders' fund for the Sanlam Life solo entity (the largest insurer within the Sanlam Group) and its SAM Own Funds.

R million	Sanlam Life Insurance Limited	
	2018	2017
Reconciliation of IFRS Shareholders' Fund to SAM Own Funds

Sanlam Life solo SCR

The graph below shows the SCR for Sanlam Life (solo) under SAM. The main contributors to the SCR are market risk and life risk. The main drivers of market risk are exposure to financial instruments (especially resulting from future product fee income being linked to policyholder investment portfolios), interest rate movements and the value of investment guarantees. The main drivers of life risk include lapse assumptions, the level of interest rates as well as mortality/longevity assumptions.

31 December 2018

31 December 2017

CAPITAL AND RISK MANAGEMENT REPORT (continued)

Sanlam Life covered business

For this view, the SAM balance sheet and SCR are adjusted to exclude strategic participations, cash available for dividend payments to Sanlam, discretionary capital and other capital not allocated to covered business. Sanlam sets the level of required capital for the Sanlam Life covered business on this view, based on a stated target SCR cover range of between 170% and 210%.

The SCR cover ratio for Sanlam Life covered business of 221% at 31 December 2018 remained above the stated target range.

Sensitivity analysis

The following table provides solvency sensitivity analysis for the Sanlam Group and Sanlam life solo.

Sanlam Group

R million	Own Funds eligible to meet SCR		SCR		Surplus		SCR cover	
	2018	2017	2018	2017	2018	2017	2018	2017
Base position	91 161	83 504	42 411	38 260	48 750	45 244	215%	218%
Equities -30% ⁽¹⁾	84 503	76 202	40 953	35 596	43 550	40 606	206%	214%
Interest rates -1%	92 951	85 104	43 477	38 560	49 474	46 544	214%	221%
Credit spreads +1%	90 398	82 371	42 440	38 293	47 958	44 078	213%	215%
ZAR appreciation 10%	86 952	81 166	41 156	37 600	45 796	43 566	211%	216%
Shock scenario ⁽²⁾	82 241	72 795	40 687	34 558	41 554	38 237	202%	211%

Sanlam Life

R million	Own Funds eligible to meet SCR		SCR		Surplus		SCR cover	
	2018	2017	2018	2017	2018	2017	2018	2017
Base position	118 503	104 414	44 853	38 113	73 650	66 301	264%	274%
Equities -30% ⁽¹⁾	86 887	80 693	34 274	28 243	52 613	52 450	254%	286%
Interest rates -1%	119 653	105 606	45 350	38 550	74 303	67 056	264%	274%
Credit spreads +1%	118 088	104 204	45 024	38 482	73 064	65 722	262%	271%
ZAR appreciation 10%	117 512	103 783	44 705	38 327	72 807	65 456	263%	271%
Shock scenario ⁽²⁾	84 814	77 473	34 329	28 344	50 485	49 129	247%	273%

⁽¹⁾ For the equity sensitivity, the value of participations in Sanlam Life is also assumed to decline by 30%, while the Sanlam Group result considers the actual equity exposure within these participations.

⁽²⁾ Equities decline by 30% and implied equity volatility increases by 25%

Property values decline by 15%

Fixed interest yields and inflation-linked real yields increase or decrease by 25% of the nominal or real yields

Emerging market currencies decline by 20% against developed market currencies

Credit spreads widen by 1%

The sensitivities illustrate the resilience of the Sanlam and Sanlam Life balance sheets. The cover ratio improves for some equity sensitivities due to the effect of the equity symmetrical adjustment in the standard formula under the Prudential Standards that allows for a reduced equity stress after a downward adjustment to equity values.

Credit rating

Standard & Poor’s (S&P) issued the following ratings for Group companies during 2018:

Most recent ratings issued	
Sanlam Limited	South Africa National Scale: zaAA-
Sanlam Life Insurance Limited	South Africa National Scale: zaAAA
Subordinated debt issued by Sanlam Life Insurance Limited	South Africa National Scale: zaAA-
Santam Limited	South Africa National Scale: zaAAA

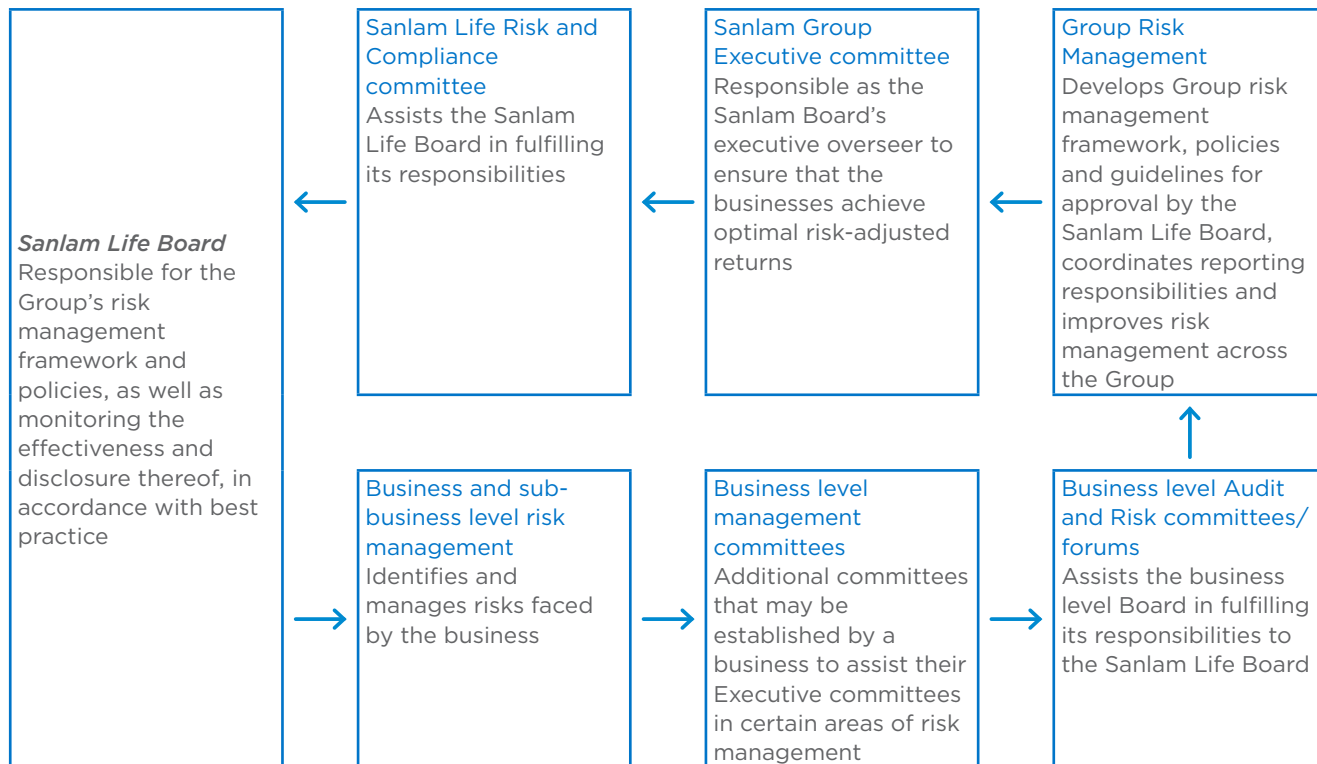

Risk management

Governance structure

In terms of the Group’s overall governance structure, the meetings of the Sanlam Board and Sanlam Life Board are combined to improve the flow of information and to increase the efficiency of the Boards. The agenda of the Sanlam Board focuses on Group strategy, capital management, accounting policies, financial results, dividend policy, human resource development and corporate governance and JSE requirements. The Sanlam Life Board is responsible for statutory matters across all Sanlam businesses, as well as monitoring operational efficiency and risk issues throughout the Group. In respect of separately listed subsidiaries, this is done within the limitations of sound corporate

governance practices. Refer to the Corporate Governance Report online for further information on the responsibilities of the Sanlam and Sanlam Life Boards and their committees.

The Group operates within a decentralised business model environment. In terms of this philosophy, the Sanlam Life Board sets the Group enterprise risk management policies and frameworks and the individual businesses take responsibility for all operational and risk-related matters on a business level, within the limits set by these policies and frameworks. The following diagram depicts the generic flow of risk management information from the individual businesses to the Sanlam Life Board.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

Role of Group Risk Management

The role of Group Risk Management is one of setting Group standards and guidelines, coordinating and monitoring risk management practices and ultimately reporting to the Sanlam and Sanlam Life Boards.

Group Risk Management plays an active role with regard to risk management in the Sanlam Group. The involvement includes the following:

- Permanent invitees of business units' Risk and Audit committees;
- Member of the Central Credit committee (see description below);
- Transactional approval incorporated into approval frameworks of business units where appropriate;
- Involvement and approval of corporate activity transactions;

- Chairs the Estate committee and Asset and Liability committee at Group level, as well as the Group risk forum (see descriptions below);
- Chairs the Group IT Steering committee;
- Guidance on risk-related matters at business level;
- Involvement with specialist risk management issues at business level;
- Regular meetings/engagement with the Cluster chief risk officers; and
- Member of the Non-Listed Asset Controlling Body.

A number of other risk management/monitoring mechanisms operate within the Group as part of the overall risk management structure. The most important of these are illustrated in the following table:

OTHER RISK MANAGEMENT/MONITORING MECHANISMS

Estate committee Reviews and oversees the management of the Group's capital base, including policyholder portfolios where shareholders carry all investment risk	Asset and Liability committee Determines appropriate investment policies and guidelines for policyholder portfolios where guarantees are provided	Central Credit committee Oversees the identification, measurement and control of corporate credit risk exposure
Investment committees Determine and monitor appropriate investment strategies for policyholder solutions	Treasury function Manages the liquidity risks in the borrowing functions of Sanlam	Non-Listed Asset Controlling Body Reviews and approves the valuation of all unlisted assets in the Group for recommendation to the Sanlam and Sanlam Life Boards
Group risk forum Aids coordination and transfer of knowledge between businesses and the Group, and assists Group Risk Management in identifying risks requiring escalation to the Sanlam Life Board	Financial Director Ensures that sound financial practices are followed, adequate and accurate reporting occurs, and financial statement risk is minimised	Actuarial Monitors and reports on key risks affecting the life insurance operations. Determines capital requirements of the life insurance operations and the potential impact of strategic decisions thereon, by using appropriate modelling techniques
Forensics Investigates and reports on fraud and illegal behaviour in businesses	Group Secretariat and Public Officers Reviews and reports on corporate governance practices and structures. Reports on applicable legal and compliance matters	Group Compliance function Facilitates management of compliance through analysing and advising on statutory and regulatory requirements, and monitoring implementation and execution thereof

OTHER RISK MANAGEMENT/MONITORING MECHANISMS

<p>Group Technology and Information Manages and reports Group-wide Technology, Cyber and Information Security risks</p>	<p>Risk Officer (per business) Assists business management in their implementation of the Group risk management framework and policies, and to monitor the business's entire risk profile</p>	<p>Internal audit Assists the Sanlam Life Board and management by monitoring the adequacy and effectiveness of risk management in businesses</p>
<p>Actuarial forum Assists the Audit, Actuarial and Finance and the Risk and Compliance committees on actuarial related matters. It also assists the Actuarial Control Function in providing oversight over first line activities in Group Actuarial, most notably balance sheet management</p>	<p>General Insurance forum Assists the Audit, Actuarial and Finance and the Risk and Compliance committees on general insurance related matters</p>	

Group risk policies, standards and guidelines

The main policies, standards and guidelines are:

- Sanlam Group enterprise risk management (ERM) policy and plan;
- Sanlam Group risk escalation policy;
- Sanlam Group business continuity management policy;
- Definitions of risk categories standard;
- Risk appetite guidance note;
- Sanlam Group risk appetite statement;
- Sanlam risk management maturity model;
- Sanlam risk and compliance committee charter;
- Sanlam Life risk and compliance committee charter;
- Sanlam Group Own Risk and Solvency Assessment (ORSA) policy; and
- Group risk forum terms of reference.

A policy sets out the mandatory minimum requirements for the businesses.

A standard endeavours to ensure consistent use of terminology.

A guidance note is aimed at providing information.

The following also cover aspects with linkage to risk management:

- Sanlam Life combined assurance model;
- Sanlam Group internal control policy;
- Sanlam Group outsourcing policy;
- Sanlam Group information and information technology (I and IT) risk management policy;
- Sanlam Group cyber resilience policy;
- Representations from Group businesses to the Sanlam and Sanlam Life Audit, Actuarial and Finance committees;
- Sanlam corporate credit risk strategy and policy;
- Sanlam reinsurance and other risk mitigation policy;
- Sanlam Life underwriting risk management policy;
- Sanlam investment policy;
- Sanlam financial crime combating policy;
- Sanlam human resources policies;
- Sanlam Group governance framework;
- Sanlam Group high-level authorisation framework;
- Sanlam Life Audit, Actuarial and Finance committee charter; and
- Sanlam Group anti-money laundering and the countering of the financing of terrorism (AML/CFT) policy.

Sanlam Group enterprise risk management policy and plan

The Group ERM policy and plan include the following main components:

- The broad objectives and philosophy of risk management in the Group;
- The roles and responsibilities of the various functionaries in the Group tasked with risk management; and
- The Group's minimum standards for implementation of risk management in the businesses.

Sanlam Group risk escalation policy

The risk escalation policy defines the circumstances under which risk events and emerging risks should be escalated to the Sanlam Group level. This includes quantitative and qualitative measures.

Summary of Sanlam Group risk appetite

The Sanlam Group has a risk appetite framework that aims to articulate the types and quantum of risks that the organisation are prepared to take (i.e. seek, accept or tolerate) in pursuit of its strategic objectives (including objectives of value creation and growth). It sets out the quantitative and qualitative boundaries on risk taking activities that apply across the organisation.

The risk appetite reflects the Group's overall philosophy to risk taking, thus reflecting how it balances its goals of efficiency, growth and return from a risk taking perspective. It reflects the setting of targets for risk taking across the Group as a whole, plus the breakdown of these high-level statements into more detailed risk tolerances.

Risk appetite criteria have been specified for each of the risk categories specified in the Group's risk classification standard, together with some additional criteria around capital and solvency risks and earnings risks. The Group's risk appetite statement is thus grouped into the following risk appetite buckets:

- Capital and solvency risks;
- Earnings risks;

- Market and asset concentration risks;
- Credit risks;
- Liquidity risks;
- Operational risks;
- Brand and reputational risks; and
- Strategic risks.

Each cluster/business needs to manage its risks within the Group enterprise risk management framework including the Group risk appetite statements.

Assessment of the effectiveness of the risk management process

According to King IV, the Board should receive assurance regarding the effectiveness of the risk management process. The following process is followed to provide such assurance:

- The Sanlam Risk Management Process Maturity Model (SRMPMM) was developed for Sanlam with the assistance of PricewaterhouseCoopers. Once a year all businesses conduct a self-assessment against the SRMPMM.
- Internal Audit will annually, in conjunction with Group Risk Management, prepare risk management process audit plans for approval by the Sanlam Life Risk and Compliance committee.
- Typically, the larger businesses will be assessed by an external firm against the maturity model, at least once every three years.
- Internal Audit will also typically do assessments for the smaller businesses on a rolling basis.
- The information on the assessments will be presented to the cluster Financial and Risk committees and to the Sanlam Life Risk and Compliance committee.

Risk types

The Group is exposed to the following main risks:

Risk categories (primary) Level 1	Risk Types (secondary) Level 2 and description
Operational	Operational risk is the risk that there is a loss as a result of inadequate or failed internal processes, people or systems and external events. Operational risk includes:
	Information and technology risk: the risk of obsolescence of infrastructure, deficiency in integration, failures/inadequacies in systems/networks and the loss of accuracy, confidentiality, availability and integrity of critical information.
	Business continuity risk: the risk that inadequate planning, controls and preparation are in place to ensure the organisation can overcome serious incidents or disasters and resumes its normal operations within a reasonably short period.
	Going concern risk: The risk that inadequate processes, people and/or financial resources exist to continue business in the foreseeable future.
	Legal risk: the risk that the Group's operations or its condition are disrupted or adversely affected by legal proceedings against it, adverse judgements from courts, contracts that turn out to be unenforceable or contractual obligations which have not been provided for.
	Compliance/Regulatory risk: the risk of not complying with laws, regulations, rules, related self-regulatory organisation standards and codes of conduct including acceptable market conduct practices ¹ , investment management mandates, as well as the failure to uphold the Group's core values and Code of Ethical Conduct.
	Human resources risk: the risk that the Group does not have access to appropriate skills and staff complement to operate and effectively manage other operational risk.
	Fraud/Financial crime risk: the risk of financial crime and unlawful conduct impacting on the Group. It includes both internal and external fraud.
	Taxation risk: the risk of financial loss due to changes in tax legislation that result in the actual tax on shareholders' fund earnings being higher than expected, with a corresponding reduction in return on Group Equity Value; or the actual policyholder tax being higher than that assumed in the determination of premium rates and guaranteed policy benefits.
	Regulatory change risk: the risk that unanticipated new acts or regulations will result in the need to change business practices that may lead to financial loss.
	Process risk: the risk of loss as a result of failed or inadequate internal processes.
	Project risk: the risks that are inherent in major projects.
	Physical risk: risk related to financial loss that might occur due to natural and non-natural disaster events.
Outsourcing provider risk: the risk arising from the inability or unwillingness of an outsourcing service provider to discharge its contractual obligations; and from concentration with an individual outsourcing service provider (which exacerbates the former).	
Conduct	Conduct risk relates to the failure to deliver fair client outcomes or the failure to uphold integrity within the market. It also refers to the failure to uphold the Group's core values and code of ethical conduct.

⁽¹⁾ Market conduct involves the behaviour of an organisation and of those that act on its behalf towards various stakeholders (including potential and current clients, regulators or supervisors, investors, and other market participants). Market conduct comprises market discipline (including transparency and corporate governance) and consumer protection (including treating clients fairly).

Risk categories (primary) Level 1	Risk Types (secondary) Level 2 and description
Brand and reputational	Reputational risk: is the risk that adverse publicity regarding the Group's business practices, associations and market conduct, whether accurate or not, will cause a loss of confidence in the integrity of the institution. The risk of loss of confidence relates to stakeholders, which include, <i>inter alia</i> , potential and existing clients, investors, suppliers and supervisors.
	Brand risk: is the risk that market perception of the organisation's brand might be weak or inferior when compared to other competitors within the market.
Strategic	Strategic risk is the risk that the Group's strategy is inappropriate or that the Group is unable to implement its strategy.
	Capital risk: the risk related to the potential loss of part or all of on balance sheet capital.
	Competition risk: The potential for losses due to competitive pressures.
	Governance risk: is the risk that the effective, ethical management of a company by its executives and managerial levels is not achieved.
	Market share risk: risk related to the reduction of the organisation's market share or inability to grow/expand market share.
	Organisational strategy risk: risk that the structure of the organisation or the overall strategic direction of the organisation might cause the organisation not to achieve its strategic goals.
	Performance risk: risk that products or services offered by the organisation might underperform against market expectations.
	Product risk: the risk that relates to design defects within products which may cause loss to the organisation.
	Profit/earnings risk: risk that profitability of the organisation might be affected due to various internal/external factors.
	Investment risk: the probability or likelihood of occurrence of losses relative to the expected return on any particular investment.
Market	Market risk is the risk arising from the level or volatility of market prices of financial instruments which have an impact upon the value of assets and liabilities of the organisation. Market risk includes:
	Equity risk: the risk resulting from the sensitivity of values of assets, liabilities and financial instruments to changes in the level or in the volatility of market prices of equities.
	Interest rate risk: the risk of loss or adverse change in the value of assets and liabilities due to unanticipated changes in the level or volatility of interest rates.
	Currency risk: the risk of loss or adverse change in the value of assets and liabilities owing to unanticipated changes in the level or volatility of currency exchange rates.
	Property risk: the risk that the value of investment properties will fluctuate as a result of changes in the environment (i.e. the risk of loss or adverse change in the value of assets and liabilities due to unanticipated changes in the level and volatility of market prices of property).
	Asset liability mismatching (ALM) risk: the risk of a change in value as a result of a deviation between asset and liability cash-flows, prices or carrying amounts. ALM risk originates from changes in market risk factors.
	Concentration risk: the risk of losses associated with inadequately diversified asset portfolios. This may arise either from a lack of diversification in the asset portfolio, or from large exposure to default risk by a single issuer of securities or a group of related issuers (market risk concentrations).
	Market liquidity risk (also known as trading liquidity risk or asset liquidity risk): risk stemming from the lack of marketability of a financial instrument that cannot be bought or sold quickly enough to prevent or minimise a loss (or make the required profit).
	Credit spread risk: the sensitivity of the values of assets, liabilities and financial instruments to changes in the level or volatility of market implied credit spreads over the risk-free interest rate term structure.

Risk categories (primary) Level 1	Risk Types (secondary) Level 2 and description
Credit risk	Credit risk is the risk of default and deterioration in the credit quality of issuers of securities, counterparties, and intermediaries to whom the company has exposure. Credit risks includes:
	Default risk: credit risk arising from the inability or unwillingness of a counterparty to a financial instrument to discharge its contractual obligations.
	Downgrade or migration risk: risk that changes in the possibility of a future default by an obligator will adversely affect the present value of the contract with the obligator today.
	Settlement risk: risk arising from the lag between the value and settlement dates of securities transactions.
	Reinsurance counterparty risk: concentration risk with individual reinsurers, due to the nature of the reinsurance market and the restricted range of reinsurers that have acceptable credit ratings.
Funding liquidity risk	Funding liquidity risk is the risk relating to the difficulty/inability to access/raise funds to meet commitments associated with financial instruments or policy contracts.
Insurance risks (life business)	Insurance risk (life business) – relates to life insurance classes regulated under the Insurance Act: risk arising from the underwriting of life insurance contracts, in relation to the perils covered and the processes used in the conduct of business. It includes:
	Underwriting risk: the risk that the actual experience relating to mortality, longevity, disability and medical (morbidity) will deviate negatively from the expected experience used in the pricing of solutions and valuation of policy liabilities.
	Persistency risk: the risk of financial loss due to negative lapse, surrender and paid-up experience. It covers the risk of loss or adverse change in insurance liabilities due to unanticipated change in the rate of policy lapses, terminations, renewals and surrenders.
	Expense risk: the risk of loss due to actual expense experience being worse than that assumed in premium rates and the valuation of policy liabilities. It covers the risk of loss or adverse change in insurance liabilities due to adverse variation in the expenses incurred in servicing insurance and reinsurance contracts.
	Concentration risk: the risk of financial loss due to having written large proportions of business with policyholders of the same/similar risk profile (including catastrophe risk).
Insurance risks (general insurance business)	Insurance risk (general insurance business) – relates to general insurance classes regulated under the Insurance Act: risk arising from the underwriting of general insurance contracts, in relation to the perils covered and the processes used in the conduct of business. It includes:
	Claims risk (premium and reserve risk): refers to a change in value caused by ultimate costs for full contractual obligations varying from those assumed when these obligations were estimated. Claims risk are often split into – reserve risk (relating to incurred claims) and premium risk (relating to future claims).
	Underwriting risk: relates to inaccurate assessment of the risks associated with writing an insurance policy or from uncontrollable factors. As a result, the insurer's costs may significantly exceed the premium income.
	Reinsurance risk: the inability of the ceding company or the primary insurer to obtain insurance from a reinsurer at the right time and at an appropriate cost.
	Catastrophe risk: the risk of loss, or of adverse change in the value of insurance liabilities, resulting from significant uncertainty of pricing and provisioning assumptions related to extreme or exceptional events.

Risk management: general risks

1. Operational risk

The Group mitigates this risk through its culture and values, a comprehensive system of internal controls, internal audit, forensic and compliance functions in addition to other measures such as back-up facilities, contingency planning and insurance. The initiation of transactions and their administration are conducted on the basis of the segregation of duties, designed to ensure the correctness, completeness and validity of all transactions.

The management of risks associated with human resources is not addressed in this report. A discussion of the aforementioned is included in the Integrated Report available online.

The following functionaries assist in mitigating operational risk:

Internal audit

A Board-approved internal audit charter governs internal audit activity within the Group. Regular risk-focused reviews of internal control and risk management systems are carried out. The Chief Audit Executive of Sanlam is appointed in consultation with the chairman of the Audit, Actuarial and Finance committee and has unrestricted access to the chairman of the committee. The authority, resources, scope of work and effectiveness of the functions are reviewed regularly.

External audit

The Group's external auditors are Ernst & Young Inc. The reports of the independent auditors for the year under review are included on page 174 of the Integrated Report and page 4 of the Annual Financial Statements. The external auditors assess certain systems of internal financial control for the purpose of expressing an independent opinion on the Annual Financial Statements. Non-audit services rendered by the external auditors are strictly governed by a Group policy in this regard. The Group applies a policy of compulsory rotation of audit partners.

Technology, cyber and information security (IT) risk

Technology, Cyber and Information Security (collectively referred to as IT risks) are managed across the Group in an integrated manner following the ERM framework. Group Technology and Information (GTI) is the custodian of the Group's IT policy framework and ensures explicit focus on, and integration with the Group's IT governance framework, which includes the governance of cyber resilience and information security.

The Group IT Governance department and Group Cyber Security Centre in GTI report to the Group Chief Information Officer (CIO) who facilitates the process of identifying emerging IT risks as well as unpacking significant IT risks with Group-wide impact. The Group IT Steering committee (a sub-committee of the Group Exco) provides guidance to the Group CIO regarding his/her duties, such as the definition and execution of the Group's IT strategy and the establishment of policy in response to IT risks.

The quarterly IT Risk and CIO reports, summarising the Group-wide IT risk and IT strategy position, are delivered to the Group IT Steering committee and the Risk and Compliance committee.

Going concern/business continuity risk

The Board regularly considers and records the facts and assumptions on which it relies to conclude that Sanlam will continue as a going concern. Reflecting on the year under review, the Board considered a number of facts and circumstances and is of the opinion that adequate resources exist to continue business and that Sanlam will remain a going concern in the foreseeable future. The Board's statement to this effect is also contained in the statement on the responsibility of directors in the Annual Financial Statements.

Legal risk

During the development stage of any new product and for material transactions entered into by the Group, the legal resources of the Group monitor the drafting of the contract documents to ensure that the rights and obligations of all parties are clearly set out. Sanlam seeks to minimise uncertainties through continuous consultation with internal and external legal advisers, to understand the nature of risks and to ensure that transactions are structured and documented appropriately.

Compliance risk

Laws and regulations

Sanlam considers compliance with applicable laws, industry regulations and codes an integral part of doing business. The Group Compliance Office, together with the compliance functions of the Group businesses, facilitates the management of compliance through the analysis of statutory and regulatory requirements, and monitors the implementation and execution thereof.

Compliance with client mandates

Automated pre-compliance rules for clients' investment guidelines are loaded on the investment management operations' order management system. This means that a system rule will generally prevent any transaction that may cause a breach. Apart from this continuous monitoring, post-trade compliance reports are produced from the order management systems. Reporting of compliance monitoring with investment guidelines is done on a monthly basis, although the monitoring activities happen continuously. When a possible breach is detected, the portfolio manager is requested to confirm whether a breach has taken place, to explain the reason for the breach and to indicate when it will be rectified. When a breach is confirmed, the portfolio manager must generally rectify the breach as soon as possible. The action taken may vary depending on the type of breach. The detailed results of the mandate monitoring process are discussed with the head of investment operations on a monthly basis.

Derivative exposures are monitored on a daily basis for compliance with approval framework limits, as well as client investment guidelines where the guidelines are more restrictive than the investment manager's own internal limits.

Fraud risk

The Sanlam Group recognises that financial crime and unlawful conduct are in conflict with the principles of ethical behaviour as set out in the Group's code of ethics, and undermines the organisational integrity of the Group. The financial crime combating policy for the Sanlam Group is designed to counter the threat of financial crime and unlawful conduct. A zero-tolerance approach is applied in combating financial crime and all offenders are prosecuted. The forensic services function at Group level oversees the prevention, detection and investigation of incidents of unlawful conduct that are of such a nature that they may have an impact on the Group or the executive of a business cluster. Group forensic services are also responsible for the formulation of Group standards in respect of the combating of unlawful conduct and the implementation of measures to monitor compliance with these standards.

The Chief Executive of each business cluster is responsible for the implementation of the policy in his or her respective business and is accountable to the Group Chief Executive and the Sanlam and Sanlam Life Boards. Quarterly reports are submitted by Group forensic services to the Sanlam and Sanlam Life Risk and Compliance committees on the incidence of financial crime and unlawful conduct in the Group and

on measures taken to prevent, detect, investigate and deal with such conduct.

Taxation risk

The risk is addressed through clear contracting to ensure that policy contracts entitle policyholders to after-tax returns, where applicable. The Group's internal tax resources monitor the impact of changes in tax legislation, participate in discussions with the tax legislator to comment on changes in legislation and are involved in the development of new products. External tax advice is obtained as required.

Regulatory risk

Regulatory risk is mitigated by ensuring that the Group has dedicated personnel that are involved in and therefore informed of relevant developments in legislation. The Group takes a proactive approach in investigating and formulating views on all applicable issues facing the financial services industry. The risk is also managed, as far as possible, through clear contracting. The Group monitors and influences events, to the extent possible, through participation in discussions with legislators, predominantly through industry organisations.

Process risk

The risk of failed or inadequate internal processes is addressed through a combination of the following:

- A risk-based approach is followed in the design of operational processes and internal controls;
- Operational processes are properly documented;
- Staff training and the employment of a performance-based remuneration philosophy; and
- Internal audit review of key operational processes.

Project risk

A formalised, risk-based approach is followed for the management of major projects to ensure that projects are effectively implemented and the project hurdle rate is achieved. Key deliverables, progress and risks are monitored on a continuous basis throughout the project life cycle. Internal specialists and external consultants are used as required to provide specialist knowledge and experience.

Outsourcing provider risk

A Group outsourcing policy is in place and aims to provide clear direction and policy regarding the strategic management (e.g. assessment of outsourcing options, establishment of agreements, the ongoing management of and reporting on outsourcing) of all outsourcing arrangements, whether external or internal within the Sanlam Group.

2. Reputational risk

Risks with a potential reputational impact are escalated to the appropriate level of senior management. The Audit, Actuarial and Finance and the Risk and Compliance committees are involved as required. Events with an industry-wide reputational impact are addressed through industry representative groups.

3. Conduct risk

Conduct risk is being monitored through various means within the individual business clusters. There is a specific focus on market and client conduct such as Treating Clients Fairly (TCF). These metrics are monitored and reported on a regular basis to all relevant stakeholders within the business clusters. Escalation of conduct risk matters arising from the business clusters to Group level will follow the normal risk escalation policy.

4. Strategic risk

The Group's governance structure and various monitoring tools ensure that any events that affect the achievement of the Group's strategy are escalated and addressed at the earliest opportunity. The Board has no tolerance for any breach of guidance.

Group strategy is addressed on a continuous basis at various forums within the Group, the most important of which are:

- The Group's strategic direction and success are discussed and evaluated at an annual special strategic session of the Sanlam Board as well as at the scheduled Board meetings during the year;
- As part of the annual budgeting process, the Group businesses present their strategic plans and budgets to the Sanlam Group Executive committee, which ensures that the businesses' strategies are aligned with the overall Group strategy; and
- The Sanlam Group Executive committee, which includes the Chief Executives of the various Group clusters, meets on a regular basis to discuss, among others, the achievement of the clusters' and Group's strategies.

Any strategic issues are identified at these meetings and corrective actions are immediately implemented.

Risk management: by business area

The following business areas' risks are included:

- Investment management;
- General insurance;
- Life insurance; and
- Retail credit

SanFin, Santam and the Group Office are excluded from the above business areas, but rather disclosed separately.

Investment management

The Group's investment management operations are primarily exposed to operational risks, as they have limited on-balance sheet exposure to financial instruments. Investment risk is borne principally by the client. The investment management operations are, however, exposed to market risk owing to the impact of market fluctuations on revenue levels, as investment fees are generally linked to the level of assets under management. This exposure is reduced through asset class and product diversification.

Investment performance

One of the key risks inherent to the investment management operations relates to the risk of consistently poor investment decisions i.e. incorrect asset allocation views and/or stock selection resulting in investment underperformance and impairment of the track record relative to benchmarks and/or peer groups. In order to mitigate this risk, the following areas are focused on:

- Recruitment and retention of high quality investment professionals and support staff who are organised into stable teams, with a performance culture that receive pertinent training and development and regular employee appraisals;
- Optimisation of a robust investment process to affect good investment decisions;
- Rigour of the procedures for portfolio implementation;
- Effectiveness of the dealing desk; and
- Analyses of fund performance.

The above interventions are implemented with due cognisance of Sanlam Investment Group's fiduciary responsibility to, at all times, act in the best interest of the clients and in accordance with the investment mandate directives.

General Insurance

Sanlam Emerging Markets' exposure to general insurance business includes significant exposures to general insurers in Morocco, Ivory Coast and Lebanon, an investment in Shriram General Insurance (through the holding in Shriram Capital and direct) in India and a holding in Pacific & Orient in Malaysia. In addition to these investments, SEM holds smaller stakes in various other general insurance businesses, either directly or through Saham Finances, across Africa.

The main risk emanating from the general insurance operations is insurance risk. This risk is managed through reinsurance, close monitoring of claims and sound underwriting practices.

Life insurance

The Group's life insurance businesses are exposed to financial risk through the design of some policyholder solutions, and in respect of the value of the businesses' capital. Non-participating policyholder solutions and those that provide investment guarantees (such as market-related business, stable and reversionary bonus business and non-participating annuity business), expose the life insurance businesses to financial risk. Other business, such as linked policies (where the value of policy benefits is linked directly to the fair value of the supporting assets) does not expose the life insurance businesses to direct financial risk as this risk is assumed by the policyholder. The life insurance businesses' capital is invested in financial instruments, which also exposes the businesses to financial risk, in the form of market, credit and liquidity risk.

The table below summarises the various risks associated with the different policyholder solutions as well as with the capital portfolio. Please refer to the 'Policy liabilities and profit entitlement section' on page 61 for a description of the different policyholder solutions, as well as to note 14 on page 99, which discloses the monetary value of the Group's exposure to the various solutions.

Capital portfolio	✓ ⁽⁷⁾	✓	✓	✓	✓	✓	✗	✗

⁽¹⁾ Only market-related policies (not linked policies) expose the life insurance businesses to this risk, due to these policies providing guaranteed minimum benefits at death or maturity.

⁽²⁾ The life insurance businesses are exposed to this risk, only if the assets backing these policies have underperformed to the extent that there are negative bonus stabilisation reserves that will not be recovered by declaring lower bonuses in the subsequent years.

⁽³⁾ Although liquidity risk is present, it is not a significant risk for the savings businesses due to an appropriate amount of liquid assets held in respect of expected outflows.

⁽⁴⁾ An immaterial amount of assets is exposed to this risk.

⁽⁵⁾ Liabilities are matched, as far as possible, with interest-bearing assets to ensure that the duration of assets and liabilities are closely aligned. This may also include derivatives which could give rise to liquidity risk.

⁽⁶⁾ Liabilities are matched with assets that have similar maturity profiles.

⁽⁷⁾ Sanlam Life's portfolio backing required capital consists of assets managed according to a hedged equity programme.

x Risk not applicable to item

Linked and market-related business

Linked and market-related business relates to contracts where there is a direct relationship between the returns earned on the underlying portfolio and the returns credited to the contract. Policyholders carry the full market risk in respect of linked business. Market-related policies, however, provide for guaranteed minimum benefits at death or maturity, and therefore expose the life insurance businesses to market risk. The risk relating to guaranteed minimum benefits is managed by appropriate investment policies, determined by the Asset Liability committee (ALCO), and by adjusting the level of guarantees for new policies to prevailing market conditions. These investment policies are then reflected in the investment guidelines for the policyholder portfolios. The Group's long-term policy liabilities include a specific provision for investment guarantees. The current provision for investment guarantees in insurance contracts has been calculated on a market-consistent basis in accordance with professional practice notes issued by the Actuarial Society of South Africa.

Smoothed-bonus business

These policies provide for the payment of an after-tax and after-cost investment return to the policyholder, in the form of bonuses. The use of bonuses is a mechanism to smooth returns to policyholders in order to reduce the effects of volatile investment performance, and bonus rates are determined in line with the product design, policyholder reasonable expectations, affordability and

the approved bonus philosophy. Any returns not yet distributed are retained in a policyholder bonus stabilisation reserve, for future distribution to policyholders. In the event of adverse investment performance, this reserve may become negative. Negative bonus stabilisation reserves are allowed for in the valuation of these liabilities to the extent that the shortfall is expected to be recovered by declaring lower bonuses in the subsequent three years. The funding level of portfolios is bolstered through loans from the capital portfolio and cancellation of non-vested bonuses in instances where negative stabilisation reserves will not be eliminated by these management actions. At 31 December 2018, all material stable and reversionary bonus business portfolios had a funding level in excess of the minimum reporting level of 92,5%, except for the SMM Vesting Fund, which had a fund value of R300 million at 31 December 2018 and a funding level of between 92% and 92,5%. The funding level is expected to recover within three years.

Market risk is borne by policyholders to the extent that the after-tax and after-cost investment returns are declared as bonuses. The capital portfolio is, however, exposed to some market risk as an underperformance in investment markets may result in an underfunded position that would require financial support from the capital portfolio. The Group manages this risk through an appropriate investment policy. ALCO oversees the investment policy for the various smoothed-bonus

portfolios. The aim is to find the optimum balance between high investment returns (to be able to declare competitive bonus rates) and stable investment returns given the need to meet guaranteed benefits and to support the granting of stable bonus rates. The requirements for the investment management of each portfolio are set out in investment guidelines, which cover, *inter alia*, the following:

- Limitations on exposure to volatile assets;
- Benchmarks for the performance measurement of each asset class and limits on deviations from these benchmarks;
- Credit risk limits;
- Limits on asset concentration – with regard to investments in Group listed entities, the exposure of policyholders’ portfolios to these investments is based on portfolio investment considerations and restricted with reference to a specific counter’s weight in the benchmark portfolio;
- Limits on exposure to some particular types of assets, such as unlisted equities, derivative instruments, property and hedge funds; and
- Regulatory constraints.

Feedback on the investment policy and its implementation and the performance of the smoothed-bonus portfolios are provided quarterly to the Sanlam Life Board and the Sanlam Customer Interest committee.

Non-participating annuities

Non-participating annuity business relates to contracts where income is paid to an annuitant for life or for a

fixed term, in return for a lump sum consideration paid on origination of the policy. The income may be fixed, or increased at a fixed rate or in line with inflation. The Group guarantees this income and is therefore subject to interest rate risk. Liabilities are matched as far as possible with assets, mostly interest-bearing, as well as derivatives to ensure that the change in value of assets and liabilities is closely matched for a change in interest rates. The impact of changes in interest rates is tested continuously, and for a 1% parallel movement in interest rates the impact on profit will be immaterial.

Guarantee plans

These single premium policies provide for guaranteed maturity amounts. The life insurance businesses are therefore exposed to interest rate risk, if the assets backing these liabilities do not provide a comparable yield to the guaranteed value. Interest rate risk is managed by matching the liabilities with assets that have similar investment return profiles as the liabilities.

Other non-participating business

The Group is exposed to market risk to the extent of the investment of the underlying assets in interest-bearing, equity and property investments. The risk is managed through investments in appropriate asset classes. A number of the products comprising this business are matched using interest-bearing instruments, similar to non-participating annuities.

Policyholder solutions’ exposure to currency risk

The majority of currency exposure within the policyholder portfolios results from offshore assets held in respect of linked and smoothed-bonus business. Offshore exposure within these portfolios is desirable from a diversification perspective.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

Capital

Comprehensive measures and limits are in place to control the exposure of the Group's capital to market and credit risks. Continuous monitoring takes place to ensure that appropriate assets are held in support of the capital and investment return targets. Limits are applied in respect of the exposure to asset classes and individual counters.

The exposure of the Group's capital portfolio to currency risk is analysed in the table below:

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The capital portfolio has limited exposure to investment properties and accordingly the related property risk.

Sensitivities

Refer to page 213 of the Integrated Report online for an analysis of the Group's sensitivity to market risk.

2. Credit risk – policyholder solutions and capital

Life insurance businesses exposed to risk via:

	Credit risk
Policyholder solutions	✓
Capital portfolio	✓

✓ Risk applicable to item

Sanlam recognises that a sound credit risk policy is essential to minimise the effect on the Group as a result of loss owing to a major corporate failure and the possible systemic risk such a failure could lead to. The Sanlam Corporate Credit Risk policy has been established for this purpose. Credit risk occurs owing to trading, investment, structured transactions and lending activities. These activities in the Group are conducted mostly by either Sanlam Specialised Finance (SanFin), via the Central Credit Manager (CCM) activities, or Sanlam Investment Management (SIM) in terms of the investment guidelines granted to them by the life insurance operations. The Boards of SIM and SanFin have delegated responsibility for credit risk management to the Central Credit committee. In Sanlam Emerging Markets, Botswana Insurance Fund Management (BIFM), Sanlam Investments Namibia, Sanlam Investments East Africa (SIEA) as well as the asset management team in Saham Finances, perform investment activities. The Sanlam Emerging Markets ALCO and Estate committees oversee these activities as well as the investment activities of the SEM insurers who perform their own investment activities.

The governance structures ensure that an appropriate credit culture and environment are maintained, such that no transactions are concluded outside areas of competence, or without following normal procedures. This credit culture is the product of a formal credit risk strategy and credit risk policy.

The credit risk strategy stipulates the parameters for approval of credit applications, such as: economic sector; risk concentration; maximum exposure per obligor, group and industry; geographical location; product type; currency; maturity; anticipated profitability or excess spread; economic capital limits; and cyclical aspects of the economy.

The credit risk framework highlights the processes and procedures to be followed in order to maintain sound credit granting standards, to monitor and manage credit risk, to properly evaluate new business opportunities and to identify and administer "problematic" credits. Credit analysis is a structured process of investigation and assessment, involving identifying the obligor, determining whether a group of connected obligors should be consolidated as a Group exposure and analysing the financial information of the obligor. A credit rating, being a ranking of creditworthiness, is allocated to the obligor. In addition to external ratings, internal rating assessments are conducted, whereby the latest financial and related information is analysed in a specified and standardised manner, and to ensure a consistent and systematic evaluation process. External ratings (e.g. Moody's Investor Services, Standard & Poor's and Global Credit Ratings) are taken into account when available.

All facilities are reviewed on at least an annual basis by the appropriate approval authority. Where possible, Sanlam's interest is protected by obtaining acceptable security. Covenants are also stipulated in the loan

agreements, specifying actions that are agreed to. A credit administration and reporting department is in place to implement risk control measures and maintain ongoing review of the credit reports and conditions, and to ensure overall compliance with the credit risk policy.

In addition to the above measures, some portfolios are also managed in terms of the investment guidelines of the life insurance operations, which place limits in terms of the lowest credit quality that may be included in a portfolio, the average credit quality of instruments in a portfolio as well as limits on concentration risk.

The Group is also exposed to credit risk in respect of its working capital assets. The following are some of the main credit risk management actions:

- Unacceptable concentrations of credit risk to groups of counterparties, business sectors and product types are avoided by dealing with a variety of major banks and spreading debtors and loans among a number of major industries, clients and geographic areas;

- Long term insurance business debtors are secured by the underlying value of the unpaid policy benefits in terms of the policy contract;
- General insurance premiums outstanding for more than 60 days are not accounted for in premiums, and an appropriate level of provision is maintained; and
- Exposure to external financial institutions concerning deposits and similar transactions is monitored against approved limits.

The Group has considered the impact of changes in credit risk on the valuation of its liabilities. Credit risk changes will only have an impact in extreme situations and are not material for the 2018 and 2017 financial years. Given the strong financial position and rating of the Group, the credit rating of its liabilities remained unchanged.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The tables below provide an analysis of the ratings attached to the Group's life insurance businesses' exposure, including the exposure managed by SanFin, to instruments subject to credit risk using international rating scales.

⁽¹⁾ The not-rated Government interest-bearing investments relate mainly to not-rated Government paper held by some of the Group's life businesses outside of South Africa in their local markets.

⁽²⁾ Prior year figures were restated to align to international rating scales.

⁽³⁾ Ratings are principally derived from internally assessed ratings for issuers as supposed to external ratings.

⁽⁴⁾ Due to timing of the Saham Finances acquisition, interest-bearing investment assets for Saham Finances have been classified as not rated.

The majority of the counterparties to structured transactions are institutions with at least a BB rating. The Group's short-term positions are included in the above table under the counterparties' long-term rating where Sanlam has both a long-term and short-term exposure to the entities.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

Maximum exposure to credit risk

The life insurance businesses' maximum exposure to credit risk is equivalent to the amounts recognised in the statement of financial position as there are no financial guarantees provided to parties outside the Group. Please refer to note 27 on page 120, which discloses the possible obligations of the Group. There are also no loan commitments provided that are irrevocable over the life of the facility or revocable only in adverse circumstances.

The credit quality of each class of financial asset that is neither past due nor impaired has been assessed as acceptable within the parameters used to measure and monitor credit risk, as described above. There were no material financial assets that would have been past due or impaired had the terms not been renegotiated.

Reinsurance credit risk

Sanlam makes use of reinsurance to:

- Access underwriting expertise;
- Access product opportunities;
- Enable it to underwrite risks greater than its own risk appetite; and
- Protect its mortality/risk book against catastrophes.

The use of reinsurance exposes the Group to credit risk. The counterparty risks of reinsurers are managed under the Group's credit risk framework. The Group's reinsurance arrangements include proportionate, excess

and catastrophe coverage. All risk exposures in excess of specified monetary limits are reinsured. Catastrophe insurance is in place for single-event disasters. As far as possible, credit risk in respect of reinsurance is managed by placing the Group's reinsurance only with subsidiaries of companies that have high international or similar credit ratings.

⁽¹⁾ The effects of consolidating investment funds are not taken into account in the above analysis and controlled funds are reflected as 'investment funds'.

- 3.2 Policyholder portfolios supporting linked and market-related business, participating annuities and other non-participating life business are invested in appropriate assets, taking expected cash outflows into account. Please refer to the liquidity section on page 42 describing the liquidity risk management framework.
- 3.3 These policyholder solutions do not expose the Group to significant liquidity risks. Expected cash flows are taken into account in determining the investment guidelines and asset spread of the portfolios. Limits are also placed on the exposure to illiquid investments.
- 3.4 Liabilities are matched, as far as possible, with interest-bearing assets, to ensure that the duration of assets and liabilities are closely aligned. This may also include derivatives.
- 3.5 Liquidity risk is managed by matching the liabilities with assets that have similar maturity profiles as the liabilities.
- 3.6 The life insurance businesses' capital is not subject to excessive levels of liquidity risk but assets could be realised in a short time frame if need be. The publicly issued unsecured bonds issued by Sanlam Life are managed on a corporate level (refer to page 56 for more information).

✓ Risk applicable to item

x Risk not applicable to item

Insurance risk arises primarily from the writing of non-participating annuity and other non-participating life business, as these products expose the Group to risk if actual experience relating to expenses, mortality, longevity, disability and medical (morbidity) differs from that which is assumed. The Group is, however, also exposed to persistency risk in respect of other policyholder solutions and insurance risk in respect of universal life solutions.

Persistency risk

Distribution models are used by the Group to identify high-risk clients. Client relationship management programs are aimed at managing client expectations and relationships to reduce lapse, surrender and paid-up rates. The design of insurance products excludes material lapse, surrender and paid-up value guarantees, subject to regulatory constraints, to limit financial loss at surrender. Persistency experience is monitored to ensure that negative experience is timeously identified and corrective action taken. The Group's reserving policy is based on actual experience, adjusted for expected future changes in experience, to ensure that adequate provision is made for lapses, surrenders and paid-up policies.

Other insurance risk

Underwriting risk

The Group manages underwriting risk through:

- its product development process and underwriting policy to prevent anti-selection and ensure appropriate premium rates (loadings) for sub-standard risks;
- adequate reinsurance arrangements to limit exposure per individual and manage concentration of risks;
- claims handling policy; and
- adequate pricing and reserving.

Quarterly actuarial valuations and the Group's regular profit reporting process assist in the timely identification of experience variances. The following policies and practices are used by the Group as part of its underwriting strategy to mitigate underwriting risk:

- All long-term insurance product additions and alterations are required to pass through the approval framework that forms part of the life insurance business's governance process. The relevant Head of Actuarial Control approves the policy conditions and premium rates of new and revised products;
- A risk based approach is followed towards testing for HIV/Aids, smoking and other underwriting factors, to balance the cost of testing with managing underwriting risk;
- Applications for risk cover are reviewed by experienced underwriters and evaluated against established standards. Retention limits are applied to limit the exposure per individual life;
- Appropriate income replacement levels apply to disability insurance;
- The experience of reinsurers is used where necessary for the rating of sub-standard risks;
- The risk premiums for group risk business and some of the in-force individual risk business can be adjusted within 12 months should claims experience deteriorate to the extent that such an adjustment is considered necessary. Most of the individual new business is sold with a guarantee that risk premiums would not be increased for the first five to 15 years;
- Risk profits are determined on a regular basis; and
- Regular investigations into mortality and morbidity experience are conducted to ensure that corrective action, for example re-rating of premiums, is taken where necessary.

Expense risk

Expenses are managed through the Group's budgeting process and continuous monitoring of actual versus budgeted unit expenses is conducted and reported on.

Concentration risk

The Group writes a diverse mix of business, and continually monitors this risk and the opportunities for mitigating actions through reinsurance. The Group's life insurance businesses are focused on different market

segments, resulting in a mix of individual and institutional clients, as well as entry-level, middle income market and high net worth clients.

The tables below provide an analysis of the exposure to the value of benefits insured in respect of non-participating life business by the major life insurance companies as well as the annuity payable per policy in respect of non-participating annuities for the Group's operations.

Non-participating annuity payable per annum per life insured

R'000	Number of lives	
	2018	2017*
0 - 20	183 872	188 012
20 - 40	24 390	23 082
40 - 60	9 149	8 389
60 - 80	5 487	5 104
80 - 100	3 081	2 905
> 100	8 585	8 736
	234 564	236 228

* Prior year figures were restated due to a correction of data.

Value of benefits insured: non-participating life business (excluding funeral policies)

Benefits insured per individual life R'000	Number of lives		Before reinsurance		After reinsurance	
	2018	2017	2018 %	2017 %	2018 %	2017 %
0 - 500	8 256 509	7 871 580	19	17	26	23
500 - 1 000	295 205	271 327	11	11	13	13
1 000 - 5 000	440 259	371 718	43	44	43	44
5 000 - 8 000	32 830	27 751	10	10	8	9
> 8 000	23 633	20 466	17	18	10	11
	9 048 436	8 562 842	100	100	100	100

Value of benefits insured: non-participating life business (including funeral policies)

Benefits insured per individual life R'000	Number of lives		Before reinsurance		After reinsurance	
	2018	2017	2018 %	2017 %	2018 %	2017 %
0 - 500	13 589 780	10 742 299	24	20	32	27
500 - 1 000	295 205	271 327	10	11	11	12
1 000 - 5 000	440 259	371 718	41	42	39	42
5 000 - 8 000	32 830	27 751	9	10	8	8
> 8 000	23 633	20 466	16	17	10	11
	14 381 707	11 433 561	100	100	100	100

The tables above indicate that the Group's exposure is spread over a large number of lives insured, thereby mitigating concentration risk.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The geographical exposure of the Group's consolidated life insurance operations is illustrated in the table below, based on the value of policy liabilities in each region. The majority of life insurance exposure is to the South African market.

	2018		2017	
	R million	%	R million	%
South Africa	433 989	80	433 925	83
Rest of Africa	48 311	9	32 467	6
Other International	61 485	11	58 049	11
Total policy liabilities	543 785	100	524 441	100

Retail credit

Retail credit business relates mainly to loan business provided by Sanlam Personal Loans (SPL) and to the retail credit businesses in the Sanlam Emerging Markets (SEM) cluster.

Sanlam Personal Loans

The balance of loans advanced by SPL to clients at 31 December 2018 is shown below:

R million	2018	2017
Gross balance	4 931	4 690
Provisions ⁽¹⁾	(606)	(289)
Net balance	4 325	4 401

⁽¹⁾ 2018 amounts are expected credit losses in terms of IFRS 9.

The main risk emanating from the retail credit operations is credit risk. The Group's maximum exposure to credit risk comprises the following:

- As SPL is a joint venture that has been equity accounted based on Sanlam's percentage interest in its net asset value, the Group is exposed to credit risk to the value of the investment, which is disclosed in note 7.2.4 on page 82.
- The Group Treasury function has also provided financing to SPL of R3 343 million at 31 December 2018 (2017: R3 520 million). This exposure is managed by SanFin. The maximum approved limit of financing that can be advanced to SPL is R4,9 billion.

Credit risk consists of credit standing and default risk. It is the company's policy to subject its potential clients to credit rating procedures. In addition, balances of advances are monitored on an ongoing basis. Collection strategies are in place to mitigate credit risk and all accounts that are in arrears are given due priority.

Sanlam Emerging Markets

Retail credit profits are a significant part of SEM's operating earnings. The majority of the Group's exposure to retail credit is made up of an investment in Shriram Capital (which has indirect holdings in Shriram Transport Finance Company and Shriram City Union Finance) and a direct holding in Shriram Transport Finance Company. The carrying value of these investments on the Group Statement of Financial Position is R8 554 million

(2017: R7 301 million), of which approximately 75% (2017: 77%) is attributed to credit business and the majority of the remainder to general insurance business. Other significant retail credit investments include Letshego which is owned by Botswana Insurance Holdings and has a carrying value of R1 494 million (2017: R1 704 million), and Capricorn Investment Holdings in Namibia (which has a stake in Capricorn Investment Group, which owns 44% of Bank Windhoek) and a carrying value of R1 123 million (2017: R1 159 million).

The main risk emanating from the retail credit operations is credit risk. These investments have been equity-accounted to reflect SEM's percentage interest in the net asset value of the respective investments. SEM's exposure to credit risk in these investments is limited to the value of SEM's investment in these businesses and any funding guarantees provided.

SEM's credit risk management process entails the monitoring of key drivers in each of the significant retail credit businesses, including an analysis of trends. Risk parameters have been set for each of these key drivers and performance against these targets is monitored and reported to the SEM Retail Credit committee on a quarterly basis.

The primary role of the SEM Retail Credit committee is to:

- Review SEM's exposure to its portfolio of associate investments into retail credit and banking businesses, as well as identify, measure and review key risk drivers;
- Propose appropriate risk appetite measures and monitor SEM's exposure against these measures as well as advise on appropriate actions to take with regards to breaches of the risk appetite;
- Assess the performance of the retail credit portfolio; and
- Liaise with the CCM as and when necessary to form a Group wide view on relevant counterparties.

SEM benefits from the diversification provided by the geographic spread of its operations (throughout Africa, India and South-East Asia), types of credit provided (secured and unsecured lending) and range of market

segments targeted. This inherently reduces the overall level of credit risk exposure.

SanFin

During 2017, changes were made to the structure of the investment cluster, including the formation of Sanlam Specialised Finance (SanFin). SanFin is a combination of Sanlam Capital Markets (SCM), including the Central Credit Manager (CCM), the portion of Sanlam Structured Solutions (SSS) responsible for Sanlam investments and Sanlam Portfolio Management (SPM), which is a combination of the activities of the ALCO team and the management of certain other assets, including a portion of the assets of Sanlam Emerging Markets. SanFin was formed to strengthen the financial risk management of the Sanlam balance sheet in collaboration with Sanlam Group Risk. The aim is to centralise the management of credit risk, liquidity risk and interest rate risk on Sanlam's balance sheet.

SCM is a financial engineering business within the Sanlam Group which primarily focuses on managing credit risk for the Sanlam Group. In addition to this, SCM also focuses on originating and structuring transactions to provide customised financing solutions to its clients.

Within SanFin, the Asset Liability and Risk Management committee (ALaRMCO) is responsible for the implementation and monitoring of risk management processes to ensure that the risks arising from proprietary positions are within the approved risk parameters. Where possible, risk measurements are calculated through the application of various statistical techniques, including VaR, and are measured against pre-approved exposure limits. These risk measurements are supplemented with stress testing and scenario analysis. While VaR models are relatively sophisticated, the quantitative market risk information generated is limited by the assumptions and parameters established when creating the related models. Sanlam believes that statistical models alone do not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and inputs in the decision-making process, but do not substitute for the experience or judgement of senior management.

If no market data is available for a specific business or investment, the risk management is qualitative by nature. The exposure and riskiness of such types of investments are typically managed by monitoring covenants and by taking the appropriate actions as agreed with the counterparty initially.

Macro risk exposures are reported to senior management, while desk risk levels are reported to the relevant managers and operators. Limit breaches are escalated for approval in terms of an approval framework. The risk information is summarised, reported to, and discussed by the ALaRMCO at two-weekly meetings.

The mandates for existing businesses are typically reviewed and submitted for ALaRMCO approval and Risk committee notification on an annual basis or more frequently if it was changed through the course of a financial year.

An initial mandate development process is undertaken for each new business ventured into by SanFin. Based on the business mandates, quantifiable risks are measured and reported on a regular basis. Any new type of business or product is subjected to a comprehensive review process before initiation to ensure that all of the risks associated with new businesses or products have been identified and can be appropriately managed.

SanFin is also exposed to credit risk in respect of its working capital assets and loans extended as part of its debt finance and equity structuring activities. Collateral is placed or received for transactions entered into by SanFin, including (but not limited to) securities lending and derivative exposures.

1. Market risk

SanFin uses VaR to calculate market risk capital for listed instruments. VaR measures the maximum loss over a given horizon with a specified level of confidence.

VaR is computed as follows:

- At a 99,5% confidence level (to be consistent with Sanlam's risk appetite relating to SanFin's business);
- Over a 10-day holding period (which takes account of market liquidity risk in the VaR calculation through setting the liquidity period at 10 days);
- Multiplied by a factor of three (to allow for uncertainty in estimating VaR at high confidence levels); and
- VaR is calculated on a diversified basis for SanFin as a whole and takes the diversification of portfolios into account.

Equity risk

For listed equity, price stress tests are performed on the SCM portfolios. The scenarios used in the stress tests incorporate a combination of equity price movements of between -30% and +20%. In the equity price stress test results, the maximum loss is R95 million (2017: R46 million).

R million	Maximum net loss	
	2018	2017
Incremental change in price:		
-5% to 5%	16	7
-10% to 10%	33	14
-15% to 15%	51	21
-30% to 20%	95	46

CAPITAL AND RISK MANAGEMENT REPORT (continued)

Interest rate risk

Various interest rate stress tests are performed on the SCM portfolios. The relative parallel interest rate stress test calculates the market exposure based on interest rate movements of between +50% and -20%, all else being equal.

The market exposure that was calculated at 31 December for these tests was as follows:

R million	Maximum net loss	
	2018	2017
Incremental change in yield:		
-10% to 10%	32	22
-20% to 20%	62	41
-20% to 50%	139	92

2. Credit risk

For credit risk capital, SanFin utilises the concept of unexpected losses. Based on historical default data, expected losses are computed on a portfolio of credits. Economic principles dictate that a provision should be created for expected losses. An unexpected loss, on the other hand, is the maximum amount over and above the expected loss that SanFin could incur over the particular time horizon with a certain level of confidence. In SanFin's economic capital model, an unexpected loss over a one-year time horizon at a 99,5% confidence level is used to compute the credit risk capital. This is consistent with the one-year 99,5% VaR used for market risk capital.

At the end of the financial year, SanFin's maximum unexpected loss (credit risk capital) was R1 350 million (2017: R1 034 million). The increase in the maximum unexpected loss from 2017 is due to the increase in the size of the credit portfolio.

Credit spread stress tests are calculated for all instruments sensitive to credit spread changes. The profit or loss from changes in credit spreads on both the assets and funding is calculated in these stress tests. The stress test results are determined as follows:

- Credit ratings for credit assets and funding are deteriorated by 1, 2 and 3 rating notches;
- Impact of these deteriorations on credit spreads is determined with reference to a predefined credit spread matrix;
- Changed credit spreads are used to revalue credit assets and funding; and
- Resultant net changes in the valuations of credit assets and funding are seen as the test results.

The table below shows the possible effect of a 1, 2 and 3 notch deterioration in credit rating. The total impact on the valuation of the assets is slightly offset by the impact on the valuation of the funding that is used to acquire the positions in the market.

R million	2018	2017
Stress Results 1 (1 Notch)	(109)	(133)
Stress Results 2 (2 Notch)	(239)	(279)
Stress Results 3 (3 Notch)	(379)	(452)

Maximum exposure to credit risk

SanFin's maximum exposure to credit risk is equivalent to the amounts recognised in the statement of financial position, as there are no financial guarantees provided to parties outside the Group that is expected to result in an outflow of resources, nor are there any loan commitments provided that are irrevocable over the life of the facility or revocable only in adverse circumstances. Please refer to note 27 on page 120, which discloses the possible obligations of the Group.

Credit risk exposures are reported on a netted basis, therefore after taking collateral and netting agreements into account. Appropriate haircuts to collateral and add-ons to exposures are implemented in line with the formulated Credit Exposure Quantification policy. Credit risk exposures are mitigated through several measures, including physical collateral (e.g. mortgage bonds) considered on a case-by-case basis, the use of netting agreements, or guarantees issued by third parties.

The credit quality of each class of financial asset that is neither past due nor impaired, has been assessed as acceptable within the parameters used to measure and monitor credit risk, as described above. There are no assets that would have been past due or impaired, had the terms not been renegotiated.

Concentration risk

Management determines concentrations by counterparty, with reference to the proportion of total credit risk capital held in respect of that counterparty compared to the overall credit risk capital of the entire portfolio. The 10 largest contributors to credit risk capital make up 30% (2017: 29%) of total credit risk capital, but only 14% (2017: 11%) of the total exposure. SanFin is therefore not exposed to significant concentration risk.

3. Liquidity risk

Within SCM, the maximum available facilities of R7 billion (2017: R7 billion) exceed the amount utilised of R3 billion (2017: R4,6 billion), indicating available unutilised funding sources. In order to keep commitment fees contained within the Sanlam Group, facilities are negotiated with Sanlam at market-related terms, before external facilities are sought.

Undrawn committed facilities granted by SCM to various counterparties were R435 million (2017: R190 million). A significant portion of trading account assets and liabilities is due within one year.

Hedging of long term liabilities within the CCM is achieved by investing in shorter dated credit instruments in combination with bond forwards and bond futures to match the interest rate sensitivity of the liabilities as closely as possible. This introduces roll-over risk at futures close out and/or forward maturity dates, additional cash requirements emanating from collateral and margin calls during periods of market stress events, as well as decreasing cash amounts raised from bond carry roll-overs as bond values fall. To manage these additional liquidity risks in the Group, a Liquidity Risk Management policy has been developed and has been approved by the Board. The policy is based on the principles of Basel III (including the need for High Quality Liquid Assets to be held to cover liquidity requirements during periods of market and liquidity stress events), with specific attention given to the management of hedge roll-over risk. However, different to banks, a life company's balance sheet has an inherent ability to absorb illiquidity due to the nature, term and structure of its liabilities. This ability to absorb illiquidity is used to mitigate the liquidity risks within the CCM. It is anticipated that the Liquidity Risk Management policy will be enhanced over time as further work is completed in relation to the illiquidity absorption capability of the Sanlam Life balance sheet.

Santam

Objective and framework

As an insurance group, Santam Limited and its subsidiaries are exposed to various insurance and financial risks. These risks cause uncertainty and therefore the challenge for management is to determine what level of uncertainty is acceptable for each business unit as it strives to enhance stakeholder value.

Santam has adopted an ERM approach and framework that enables management to effectively deal with uncertainty and thus enhance the capacity to build value by efficiently and effectively deploying resources in pursuit of achieving the group's objectives. The ERM process adopted is considered appropriate to the nature, scale and complexity of Santam's business and risks. The Santam approach is aligned with the principles of King IV, ISO 31000, SAM requirements as well as the requirements of our majority shareholder, Sanlam.

Santam's ERM framework and process is designed to assist the board in ensuring that management continually monitors risk and reports back to the risk committee on the status of these risks. ISO 31000 was adopted to ensure that a structured and practical approach to risk management is implemented throughout the business. Santam's ERM process is well defined and businesses are responsible and accountable for integrating ERM in the operations. ERM adds value by being aligned to the business strategy and objectives.

Risk assessment process

A key component of the ERM framework is the risk assessment process. Santam's risk assessment process consists of risk identification, risk analysis, risk evaluation and risk treatment/management of those risks that are relevant to Santam's strategic objectives. Risks are identified from a top down (strategic) and bottom up (operational) perspective to create and maintain an integrated view of material risk exposures. The top down approach is undertaken at an executive and senior management level and considers strategic risks affecting Santam in the medium to long term.

In parallel, the bottom up approach is undertaken by enterprise, risk and compliance management (ERCM) at a business unit or specialist unit level to assess all categories of risks from their perspectives with specific focus on underwriting, reinsurance and financial risks.

The risk identification process is used to build an aggregated view of all significant risks faced by the organisation. This, together with the risk categories and knowledge base, is translated into the Santam risk universe. The risk universe is a summary of the most common risk themes across all categories of risk within Santam and assists management in understanding and effectively managing the relevant risks.

Risk analysis provides an input to risk evaluation and informs decisions on how the risks need to be treated. Risk analysis involves consideration of the causes and sources of risk, their positive and negative consequences and the likelihood that those consequences may occur.

Santam analyses quantifiable risks by using an internally developed economic capital model. The model covers the following risk categories:

- Insurance risk (consisting of underwriting and reinsurance risk);
- Credit risk;
- Market risk; and
- Operational risk.

A number of risks faced by Santam are not modelled in the internal model, namely: strategic, liquidity, conduct, reputational, political, regulatory, compliance, sovereign downgrade, legal, outsourcing and cyber risks. These risks are analysed individually by management and appropriate measures are implemented to monitor and mitigate these risks.

Once the relevant risks are better understood, the risk appetite framework governs how the risks should be managed. Santam has formulated a risk appetite policy which aims to quantify the amount of capital the business is willing to put at risk in the pursuit of value creation. It is within this risk appetite framework that Santam has selected its asset allocation and reinsurance programmes which are among the most important determinants of risk and hence, capital requirements within the organisation. The internal model allows for the

CAPITAL AND RISK MANAGEMENT REPORT (continued)

measurement of Santam's expected performance relative to the risk appetite assessment criteria agreed to by Santam's Board. The risk appetite process also includes the assessment of non-financial measures in determining the overall capital requirements. These assessments are presented to the risk and investment committees as well as the Board on a quarterly basis for consideration.

Insurance risk

Insurance risk refers to the risk of loss as a result of underwriting insurance contracts. More specifically, Santam defines insurance risk to include:

- Underwriting risk; and
- Reinsurance risk.

Over the last four years, Santam's risk management function has developed a group-wide governance and risk management framework in terms of the Board-approved underwriting and reinsurance policies, required by the regulator's Prudential Standards.

This framework is implemented at business unit level through underwriting practice policies (approved by the business units' Boards) that set out the specific requirements and parameters within which insurance risks are managed. Through Santam risk management's on-going monitoring and review processes, business units are held accountable to the framework.

A key benefit of the framework from a risk management perspective is that it facilitates enhanced oversight and collaboration between business units and significantly improves the understanding and management of risk concentrations that arise from time to time and that extend over several business unit portfolios in most instances.

Underwriting risk

Santam manages underwriting risk through its underwriting strategy and proactive claims handling. The underwriting strategy aims to ensure that the portfolio of insurance contracts issued is well diversified and reasonably priced. Claims costs are actively managed to ensure that the impact of factors such as the volatility of the rand is adequately addressed.

In general, Santam issues personal, commercial, niche and cell/policyholder insurance policies, as well as reinsurance contracts in respect of most of the classes of business listed below:

Accident and health – Provides cover for death, disability and certain health events. This excludes the benefits to the provider of health services, and is linked directly to the expenditure in respect of health services.

Alternative risk transfer (ART) – The use of techniques, other than traditional insurance, that include at least an element of insurance risk, to provide entities with risk coverage or protection.

Aviation – Covers property (both moveable and immovable) risks associated with aircraft (i.e. in respect of their use, ownership, storage, loss or damage), as well as liability and transport risks associated with this class of business.

Bonds and Guarantees – A contract whereby the insurer assumes an obligation to discharge the debts or other obligations of another person in the event of the failure of that person to do so.

Credit Insurance – Covers risks associated with the financial losses that result from the default of specified third parties (typically trade partners – both local and foreign) of the insured.

Crop – Provides indemnity for crops while still on the field against hail, drought and excessive rainfall. Cover ceases as soon as harvesting has taken place.

Engineering – Provides cover for risks relating to:

- the possession, use or ownership of machinery or equipment, other than a motor vehicle, in the carrying on of a business;
- the erection of buildings or other structures or the undertaking of other works; and
- the installation of machinery or equipment.

Liability – Provides cover for risks relating to the incurring of a liability other than relating to a risk covered more specifically under another insurance contract.

Marine – Covers property (both moveable and immovable) risks associated with watercraft (i.e. in respect of their use, ownership, storage, loss or damage), as well as liability and transport risks (both on land and on water bodies) associated with this class of business.

Motor – Covers risks relating to the possession, use or ownership of a motor vehicle. This cover can include risks relating to vehicle accident, theft or damage to third-party property or legal liability arising from the possession, use or ownership of the insured vehicle.

Property – Covers risks relating to the use, ownership, loss of or damage to movable or immovable property other than a risk covered more specifically under another insurance contract.

Transportation – Covers risks relating to the possession, use or ownership of a vessel, aircraft or other craft or for the conveyance of persons or goods by air, space, land or water. It also covers risks relating to the storage, treatment or handling of goods that are conveyed.

Travel – Covers risks associated with local and international travel, for both business and leisure purposes.

Underwriting risk results from fluctuations in the timing, frequency and severity of insured events. It includes the risk that premium provisions turn out to be insufficient to compensate claims as well as the risk resulting from the volatility of expense payments. Expense risk is implicitly included as part of the insurance risk.

In order to quantify the underwriting risk faced by Santam, a stochastic simulation of Santam's claims is performed at a line of business level within Santam's internal economic capital model. Assumptions for each line of business are determined based on more than 15 years' worth of historic data. The expected claims liabilities are modelled for specific lines of business, which are then split into the appropriate sub-classes. For each sub-class of business, three types of losses are modelled, namely attritional losses, individual large losses and catastrophe losses. Each of the sub-classes is modelled based on its own assumptions whose

methodology and calibration are thoroughly documented in the internal model documentation.

The attritional losses are modelled as a percentage of the premium. The large losses are modelled by fitting separate distributions to the claims frequency and the claim severity.

Santam also models various catastrophes and the losses from each catastrophe are allocated to multiple classes of business. The following catastrophes are modelled: Earthquake, Storm (small), Storm (large), Hail (excluding crop damage), Marine (cargo), Aviation (hull/liability), Conflagration (property), Conflagration (liability), Utility Failure, Latent Liability and Economic Downturn.

The net claims ratio for Santam, which is important in monitoring insurance risk, has developed as follows over the past seven years:

Loss history	2018	2017	2016	2015	2014	2013	2012
Claims paid and provided %*	60,6	65,9	65,1	62,1	63,1	69,3	68,3

* Expressed as a percentage of net earned premiums.

Pricing for Santam's products is generally based upon historical claims frequencies and claims severity averages, adjusted for inflation and modelled catastrophes trended forward to recognise anticipated changes in claims patterns. While claims remain Santam's principal cost, Santam also makes allowance in the pricing procedures for acquisition expenses, administration expenses, investment income, the cost of reinsurance and for a profit loading that adequately covers the cost of the capital.

Underwriting limits (per risk and, where relevant, per event) are set for business units, underwriting managers and intermediaries to ensure that Santam's risk appetite is appropriately delegated. Underwriting performance is monitored continuously and the pricing policy is revised accordingly. Risk factors considered as part of the review are unique to each class of business and constantly evolve as the risk environment changes. Santam has the right to reprice and change the conditions for accepting risks on renewal and/or 30 days.

Expenses are monitored by each business unit based on an approved budget and business plan.

The underwriting strategy aims to ensure that the risks underwritten are well diversified in terms of type and amount of risk, size, economic sector and geography. Santam has a sufficiently diversified portfolio based on insurance classes. Santam is currently focusing on obtaining international geographical diversification through the business written by Santam Re (which underwrites inward reinsurance contracts only) and the Santam Specialist business.

Underwriting risk is further mitigated by ensuring that reserve and reinsurance risk are adequately managed.

Claims development tables

The presentation of the claims development tables for Santam is based on the actual date of the event that caused the claim (incident year basis). The claims development tables, represent the development of actual claims paid.

Reserving

Reserve risk relates to the risk that the claim provisions held for both reported and unreported claims as well as their associated expenses may prove insufficient.

Santam currently calculates its technical reserves on two different methodologies, namely the 'percentile approach' and the 'cost of capital approach'. The 'percentile approach' is used to evaluate the adequacy of technical reserves for financial reporting purposes, while the 'cost of capital approach' is used as one of the inputs for regulatory reporting purposes.

Percentile approach

Under this methodology, reserves are held to be at least sufficient at the 75th percentile of the ultimate loss distribution.

The first step in the process is to calculate a best-estimate reserve. Being a best-estimate, there is an equally likely chance that the actual amount needed to pay future claims will be higher or lower than this calculated value.

The next step is to determine a risk margin. The risk margin is calculated such that there is now at least a 75% probability that the reserves will be sufficient to cover future claims.

Cost of capital approach

The cost of capital approach to reserving is aimed at determining a market value for the liabilities on the statement of financial position. This is accomplished by calculating the cost of transferring the liabilities, including their associated expenses, to an independent third party.

The cost of transferring the liabilities off the statement of financial position involves calculating a best-estimate of the expected future cost of claims, including all related run-off expenses, as well as a margin for the cost of capital that the independent third-party would need to hold to back the future claims payments.

Santam is not significantly exposed to seasonality due to the broad range of insurance contracts that Santam writes. Motor and Property contain an element of seasonality e.g. hail storms in the summer, however, there may not be a direct correlation between that seasonality and Santam's financial results. There is an element of seasonality attached to Crop, however, Santam's exposure is limited.

Reinsurance risk

Reinsurance risk is the risk of loss due to either insufficient or inappropriately structured reinsurance cover relative to Santam's risk management strategy and objectives. It also includes the risk that the reinsurance program is inappropriately administered. Santam obtains third-party reinsurance cover to reduce risks from single events or accumulations of risk that could have a significant impact on the current year's earnings or capital. Santam has an extensive reinsurance programme that has developed over a number of years to suit the risk management needs of the business.

The internal model is used to evaluate the type and quantum of reinsurance to purchase within Santam's risk appetite framework. The reinsurance programme is placed into both the local and international reinsurance markets. Reinsurance arrangements in place include proportional, excess of loss, stop loss and catastrophe coverage.

The core components of the reinsurance programme comprised:

- Individual excess-of-loss cover for property, liability, engineering, aviation and marine risks, which provides protection to limit losses between the range of R25 million to R85 million per risk, excluding reinstatement premiums following a claim or claims against the covers. Santam protects its Per Risk loss exposure down to a maximum amount of R50 million on any one risk;

CAPITAL AND RISK MANAGEMENT REPORT (continued)

- Santam buys catastrophe cover exceeding the 1 in 250 year earthquake catastrophe loss using an external validated earthquake loss prediction model. This model typically results in cover of up to 1,3% of the total exposure of the significant geographical areas, amounting to protection of R8,2 billion per event, with an attachment point of R150 million;
- The catastrophe program for an aggregate amount of losses from events in excess of R10 million was not renewed in 2018, since the price for value was not deemed worthwhile;
- During the course of the year, Santam purchased a multi-year aggregate excess of loss treaty, which protects Santam against the accumulation of multiple catastrophe losses over a financial year, for losses below the catastrophe excess of loss retention of R150 million; and
- Santam's agriculture portfolio is protected through a 60% proportional and a non-proportional reinsurance arrangement with non-proportional cover set at levels offering protection from extreme loss events.

Santam has implemented arrangements to support growth in territories outside South Africa in situations where this is dependent on Santam's S&P international rating scale rating. In 2016, Santam entered into an agreement with Munich Reinsurance Company of Africa Limited (Munich Re of Africa) in terms of which selected Santam business units will be able to use the reinsurer's S&P A- credit rating to write inwards international reinsurance business on Munich Re of Africa's licence where an international credit rating of A- or better is required. The agreement between Santam and Munich Re of Africa became effective 1 January 2017.

The agreement with Munich Re of Africa replaced the credit rating agreement which expired on 31 December 2016. Santam has decided to retain the ART reinsurance quota share programme, which was linked to the expired credit rating agreement. A number of key international reinsurers participated on the program from 1 January 2017 with an annual reinsurance quota share premium of R1 billion. The agreement also reduces Santam's net catastrophe exposure.

The Santam Board approves the reinsurance renewal process on an annual basis. The major portion of the reinsurance programme is placed with external reinsurers that have an international credit rating of no less than A- (2017: A-) from S&P or AM Best, unless specific approval is obtained from the Board to use reinsurers with ratings lower than the agreed benchmark.

Insurance-related credit risk

Credit risk reflects the financial impact of the default of one or more of Santam's counterparties.

Santam is exposed to financial risks caused by a loss in the value of financial assets due to counterparties failing to meet all or part of their obligations.

Key insurance-related areas where Santam is exposed to credit default risk are:

- Failure of an asset counterparty to meet their financial obligations;
- Reinsurer defaults on presentation of a large claim;
- Reinsurers default on their share of Santam's insurance liabilities; and
- Default on amounts due from insurance contract intermediaries.

Santam continuously monitors its exposure to its counterparties for financial statement as well as regulatory reporting purposes. It has therefore established a number of criteria in its risk appetite statement to monitor concentration risk and provide feedback to management and the Risk committee on at least a quarterly basis.

The credit quality for each of Santam's counterparties is determined using rating agencies' assessments of the probability of default over a one-year time horizon. The underlying default probabilities are based on the credit migration models developed by S&P, Moody's, Fitch and GCR, which incorporate up to 90 years' worth of credit default information. The probability of default assigned is based on the highest credit rating assigned by the various rating agencies.

For default risk, Santam uses a model which is largely based on the Basel II regulation.

The credit risk analysis is used by management to determine the level of risk capital that should be held for the following types of exposures:

- Risk-based assets such as bonds and bank deposits;
- Outstanding premiums due from intermediaries and reinsurance receivables due from reinsurers;
- Reinsurance claims provisions; and
- Exposure to potential reinsurance recoveries based on the losses generated by the internal model.

For concentration risk, Santam uses the Prudential Standards. The calculation is performed in four steps:

- Determine the exposure by counterparty;
- Calculate the excess exposure above a specified threshold level;
- Apply a charge to this excess exposure; and
- Aggregate the individual charges to obtain an overall capital requirement for concentration risk.

Credit risk capital is held for exposure to risk-based assets such as bonds and bank deposits as well as for the following types of exposure:

- Outstanding premiums due from intermediaries and reinsurance due from reinsurers;
- Reinsurance claims provisions; and
- Exposure to potential reinsurance recoveries based on the losses generated by the internal model.

Santam is protected by guarantees provided by the Intermediary Guarantee Facility (IGF) for the non-payment of premiums collected by intermediaries. Santam Group's protected portion of receivables due from contract holders and intermediaries amounts to 42,1% (2017: 43,3%). For Santam (the Company), this amounts to 48,2% (2017: 42,0%). The IGF will cease to exist from 31 March 2019. Debtors falling into the 'Not rated' category are managed by the internal credit control department on a daily basis to ensure recoverability of amounts.

Santam seeks to avoid concentration of credit risk to groups of counterparties, to business sectors, product types and geographical segments. The financial instruments, except for Santam's exposure to the four large South African banks, do not represent a concentration of credit risk. In terms of Santam's internal risk appetite framework, no more than 15% of total portfolio assets are generally invested in any one of the four major South African banks. Accounts receivable is spread over a number of major companies and intermediary parties, clients and geographic areas. Santam assesses concentration risk for debt securities, money market instruments and cash collectively. Santam does not have concentrations in these instruments to any one company exceeding 15% of total debt securities, money market instruments or cash, except for Absa where the total exposure amounted to 16,5% on 31 December 2017 and was managed down to 11,7% in the current year in accordance with the risk appetite framework.

Santam uses a large panel of secure reinsurance companies. The credit risk of reinsurers included in the reinsurance programme is considered annually by reviewing their financial strength as part of the renewal process. Santam's largest reinsurance counterparty is Allianz (2017: SCOR). The credit risk exposure is further monitored throughout the year to ensure that changes in credit risk positions are adequately addressed.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The following table provides information regarding the aggregated credit risk exposure for financial assets without taking into account collateral. The credit ratings provided in these tables were determined as follows: Sanlam Investment Management (SIM) provided management with reports generated from their credit system on a quarterly basis, detailing all counterparty duration and credit risk. These reports include international, national and internal ratings. SIM also provides management with a conversion table that is then applied to standardise the ratings to standardised international long-term rates. For assets held by subsidiaries and not managed by SIM, a process is agreed with the subsidiaries to align the credit rating analysis with Group requirements.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The carrying amount of assets included in the statement of financial position represents the maximum credit exposure.

There are no material financial assets that would have been past due or impaired had the terms not been renegotiated.

Market risk

Market risk arises from the level or volatility of the market prices of financial instruments. Exposure to market risk is measured by the impact of movements in the level of financial variables such as interest rates, equity prices and exchange rates. The following financial and insurance assets, disclosed based on similar characteristics, are affected by market risk:

- Equity securities
- Debt securities
- Unitised funds
- Receivables due from contract holders/intermediaries
- Reinsurance receivables
- Reinsurance assets
- Other loans and receivables
- Cash and cash equivalents
- Short-term money market instruments
- Cell owners' interest
- Derivatives

Santam uses a number of sensitivity or stress-test based risk management tools to understand the impact of the above risks on earnings and capital in both normal and stressed conditions. These stress tests combine deterministic shocks, analysis of historical scenarios and stochastic modelling using the internal economic capital model to inform Santam's decision making and planning process and also for identification and management of risks within the business units. Each of the major components of market risk faced by Santam is described in more detail below.

Price risk

Santam is subject to price risk due to daily changes in the market values of its equity portfolios. Santam is not directly exposed to commodity price risk.

Santam has a well-defined investment strategy, including return objectives, asset allocation, portfolio construction and asset manager selection. The strategy has been translated into various specialist mandates which in turn have been outsourced mostly to Sanlam Investment Management (SIM). The total level of equity investments, both listed and unlisted, is closely monitored by the investment committee and the Board. The internal economic capital model is used to model the asset mix and absolute level of equity exposure on at least a quarterly basis and to compare the results to Santam's risk appetite. The analysis is presented to the investment committee for consideration in terms of required actions.

Santam takes a long-term view when agreeing investment mandates with the relevant portfolio managers and looks to build value over a sustained period of time rather than utilising high levels of purchases and sales in order to generate short-term gains from its equity holdings.

Equity price risk arises from the negative effect that a fall in the market value of equities can have on Santam's net asset value. Santam's objective is to earn competitive relative returns by investing in a diverse portfolio of high-quality, liquid securities. Portfolio characteristics are analysed regularly and equity price risk is actively managed through a variety of modelling methods. Santam sets appropriate risk limits to ensure that no significant concentrations in individual companies arise. Santam's largest investment in any one company comprises 10,4% (2017: 19,0%) of the total quoted equities and 0,6% (2017: 1,0%) of the total assets. The company's largest investment in any one company comprises 18,2% (2017: 22,6%) of the total quoted equities and 0,6% (2017: 1,2%) of the total assets.

Santam makes use of derivative products as appropriate to manage equity exposure and to protect the portfolio from losses outside of its risk appetite.

Interest rate risk

Interest rate risk arises from the net effect on its assets and liabilities of a change in the level of interest rates.

The impact of a change in the interest rate on the asset mix as well as the economic capital requirements is determined using the internal economic capital model. The result of this analysis is presented to the investment committee on at least a quarterly basis for consideration and approval of required actions.

The assets backing the subordinated debt are managed within a mandate to ensure that adequate cover is provided for the related liabilities i.e. the market value of the subordinated debt and the market value of the assets backing the debt react the same way to changes in interest rates.

Exposure to interest rate risk is monitored through several methods that include scenario testing and stress testing using measures such as duration. The bond returns are modelled based on the historic performance of the individual bonds held in the portfolio, and adjusted to reflect the current interest rates and inflation environment. The risk-free rate used for modelling is 9% as at 31 December 2018 (2017: 9%).

Interest rate risk is also managed using derivative instruments, such as swaps, to provide a degree of hedging against unfavourable market movements in interest rates.

General insurance liabilities are not directly sensitive to the level of market interest rates, as they are undiscounted and contractually non-interest-bearing. Interest-bearing instruments with a fixed rate give rise to fair value interest rate risk, while interest-bearing instruments with a floating rate give rise to cash flow interest rate risk.

Currency risk

Foreign currency risk is the risk that Santam will be negatively impacted by changes in the level or volatility of currency exchange rates relative to the South African rand.

In accordance with Santam's international diversification strategy, Santam is entering into various transactions where there is an underlying foreign currency risk such as the SEM target shares and SAN JV. Santam is also expanding its reinsurance offering to predominantly other countries in Africa as well as South-East Asia and India. Furthermore, Santam has established an international investment portfolio to ensure adequate asset liability matching in terms of the claims process and capital requirements.

Santam has a well-defined foreign currency management policy which is used to ensure adequate overall asset liability matching. Santam applies hedge accounting only when approved by the Investment committee.

Santam has two sources of currency risk:

- Operational currency risk: underwriting liabilities in currencies other than the currency of the primary environment in which the business units operate (non-functional currencies); and
- Structural currency risk: investing in SEM target shares and SAN JV.

These risks affect both the value of Santam's assets as well as the cost of claims, particularly for imported motor parts, directly and indirectly. The fair values of the investments in the SEM target shares are impacted by changes in the foreign exchange rates of the underlying operations. Santam is also pursuing international diversification in underwriting operations through the business written by Santam Re and the specialist underwriting managers. Any changes in foreign exchange rates relating to the investment in SAN JV are recognised directly in the foreign currency translation reserve in the statement of changes in equity. These movements will only be released to profit or loss should the investment in SAN JV be disposed of.

In order to mitigate the foreign currency mismatch risk, Santam monitors the level of foreign currency assets relative to foreign currency liabilities and foreign currency capital requirements.

In terms of Santam's risk management strategy, foreign currency risks can be assessed on a case by case basis to determine whether specific hedging requirements exist.

Derivatives risk

Santam uses derivative financial instruments for the purpose of reducing its exposure to adverse fluctuations in interest rates, foreign exchange rates and equity prices. Santam does not use derivatives to leverage its exposure to markets and does not hold or issue derivative financial instruments for speculative purposes. There is a policy on the use of derivatives that is approved by the Santam Investment committee and the Board.

Over-the-counter derivative contracts are entered into only with approved counterparties, in accordance with Santam policies, effectively reducing the risk of credit loss. Santam applies strict requirements to the administration and valuation process it uses, and has a control framework that is consistent with market and industry practice for the activity that it has undertaken.

Liquidity risk

Liquidity risk is the risk that Santam will encounter difficulty in raising funds to meet the commitments associated with its financial obligations as a result of assets not being available in a form that can immediately be converted into cash.

Santam manages the liquidity requirements by matching the duration of the assets invested to the corresponding liabilities. The net insurance liabilities are covered by cash and very liquid interest-bearing instruments while Santam's subordinated debt obligation is covered by matching cash and interest-bearing instruments (including interest rate swaps).

The cash mandates include market risk limitations (average duration and maximum duration per instrument) to ensure adequate availability of liquid funds to meet Santam's payment obligations.

Santam's shareholders funds are invested in a combination of interest-bearing instruments, preference shares, listed equities and unlisted investments. The listed equity portfolio is a well-diversified portfolio with highly liquid shares.

Operational risk

Operational risk is the risk of direct or indirect losses resulting from human factors, external events and inadequate or failed internal processes and systems. Operational risks are inherent in Santam's operations and are typical of any large enterprise. Major sources of operational risk can include operational process reliability, information security, outsourcing of operations, dependence on key suppliers, implementation of strategic and operational change, integration of acquisitions, fraud, human error such as not placing the necessary facultative reinsurance, client service quality, inadequacy of business continuity arrangements, recruitment, training and retention of employees, and social and environmental impact.

Santam manages operational risk by a comprehensive system of internal controls. From a risk governance perspective, the three lines of defence approach is used to identify the various levels of controls, oversight and assurance, including consideration of role-player independence. Risk management processes for oversight include using a range of techniques and tools to identify, monitor and mitigate its operational risk in accordance with Santam's risk appetite. These tools include Risk and Control Self Assessments and questionnaires, Key Risk Indicators (e.g. fraud and service indicators), Scenario Analyses and Loss Reporting. In addition, Santam has developed a number of contingency plans including Incident Management and Business Continuity Plans. Quantitative analysis of operational risk exposures material to Santam are used to inform decisions on controls and the overall amount of capital held for potential risk exposures. A compulsory annual internal control declaration is completed by senior and executive management and results reported to the Risk and Audit committee. The outcome of the declaration is reviewed to ensure material control breakdowns have been noted and appropriately addressed. The declaration process supports the Board in their assessment of the system of internal controls.

Group Office

The Group Office is responsible for areas of financial risk management that are not allocated to individual businesses.

1. Liquidity risk

Term finance liabilities in respect of margin business are matched by assets with an appropriate maturity profile. These assets are managed to ensure that sufficient liquid investments are available to match the cash flow profile of the term finance liabilities. The Group has significant liquid resources and substantial unutilised banking facilities to cover any mismatch position.

The maturity profile of term finance liabilities in respect of the margin business and the assets held to match this term finance is provided in the following table:

R million	<1 year	1-5 years	>5 years	Open ended	Total
31 December 2018					
Term finance liabilities	(524)	(3 130)	-	-	(3 654)
Interest-bearing liabilities held in respect of margin business	(524)	(3 130)	-	-	(3 654)
Assets held in respect of term finance	334	2 580	626	114	3 654
Equities and similar securities	-	-	-	114	114
Corporate interest-bearing investments	41	2 579	626	-	3 246
Mortgages, policy and other loans	-	1	-	-	1
Working capital assets and liabilities	293	-	-	-	293
Net term finance liquidity position	(190)	(550)	626	114	-

R million	<1 year	1-5 years	>5 years	Open ended	Total
31 December 2017					
Term finance liabilities	(584)	(1 255)	-	-	(1 839)
Interest-bearing liabilities held in respect of margin business	(584)	(1 255)	-	-	(1 839)
Assets held in respect of term finance	212	974	504	149	1 839
Equities and similar securities	-	-	-	109	109
Corporate interest-bearing investments	182	972	504	40	1 698
Mortgages, policy and loans	-	2	-	-	2
Cash, deposits and similar securities	4	-	-	-	4
Working capital assets and liabilities	26	-	-	-	26
Net term finance liquidity position	(372)	(281)	504	149	-

The unsecured subordinated bonds issued by Sanlam Life, which are matched by assets with appropriate maturity profiles, are also managed by the Group Office. These assets are managed to ensure that sufficient liquid investments are available to match the cash flow profile of the term finance liabilities.

CAPITAL AND RISK MANAGEMENT REPORT (continued)

The maturity profile of term finance liabilities in respect of the unsecured subordinated bonds and the assets held to match this term finance is provided in the following table:

R million	<1 year	1-5 years	>5 years	Open ended	Total
31 December 2018					
Term finance liabilities					
Interest-bearing liabilities	-	(1 013)	-	-	(1 013)
Assets held in respect of term finance	87	679	192	55	1 013
Government interest-bearing investments	2	-	-	-	2
Corporate interest-bearing investments	74	552	192	-	818
Mortgages, policy and other loans	1	68	-	-	69
Structured transaction	-	43	-	-	43
Investment funds	-	-	-	55	55
Cash, deposits and similar securities	27	16	-	-	43
Working capital assets and liabilities	(17)	-	-	-	(17)
Net term finance liquidity position	87	(334)	192	55	-
31 December 2017					
Term finance liabilities					
Interest-bearing liabilities	-	-	(2 166)	-	(2 166)
Assets held in respect of term finance	262	1 353	206	345	2 166

Working capital assets and liabilities	(58)	-	-	-	(58)
Net term finance liquidity position	262	1 353	(1 960)	345	-

2. Sensitivity analysis – market risk

Refer to page 213 of the Integrated Report online for an analysis of the Group's exposure to market risk as measured by GEV.

BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Basis of presentation

Introduction

The consolidated financial statements are prepared on the historical-cost basis, unless otherwise indicated, in accordance with International Financial Reporting Standards (IFRS), SAICA Financial Reporting Guides as issued by the Accounting Practices Committee, Financial Pronouncements as issued by Financial Reporting Standards Council and the requirements of the Companies Act, No. 71 of 2008 (as amended), in South Africa. The financial statements are presented in South African rand rounded to the nearest million, unless otherwise stated.

The following new or revised IFRS and interpretations became effective in the current financial year and have therefore been applied:

- IFRS 9 – *Financial Instruments* (effective 1 January 2018)
- IFRS 15 – *Revenue from Contracts with Customers* (effective 1 January 2018)

The following new or revised IFRS and interpretations have effective dates applicable to future financial years and have not been early adopted:

- IFRS 16 – *Leases* (effective 1 January 2019)
- IFRIC 23 – *Uncertainty over Income Tax Treatments* (effective 1 January 2019)
- IFRS 17 – *Insurance Contracts* (effective 1 January 2022)

IFRS 16: *Leases* was issued by the IASB in January 2016 and replaces IAS 17: *Leases* for reporting periods beginning on or after 1 January 2019. The group does not intend to adopt the standard before its effective date. IFRS 16 has one model for lessees which will result in almost all leases being included on the statement of financial position. Under the new standard, an asset (the right to use the leased item) and the liability to pay rentals are recognised. The only exceptions are short-term and low-value leases. In addition, the nature of expenses related to those leases will now change as IFRS 16 replaces the straight-line operating lease expense with a depreciation charge for right-of-use assets and interest expense on lease liabilities.

The accounting for lessors will not significantly change.

As lessor: This new standard is not expected to have a significant impact on how the group (as lessor) accounts for leases due to the carry forward of the lessor accounting model from IAS 17. However, the group anticipates an impact as a result of the enhanced disclosures for lessors required by IFRS 16 namely:

- components of lease income; and
- risk management with respect to exposure to residual asset risk.

As lessee: The standard will affect primarily the accounting of the group's operating leases. As at the reporting date, the group has non-cancellable operating lease commitments of R2 765 million. However, the group has not yet determined to what extent these commitments will result in the recognition of an asset and a liability for future payments and how this will affect the group's profit and classification of cash flows.

Some of the commitments may be covered by the exception for short-term and low-value assets and some commitments may relate to arrangements that will not qualify as leases under IFRS 16.

As lessee, the Group can either apply the standard using a:

- Retrospective approach; or
- Modified retrospective approach with optional practical expedients.

The lessee applies the election consistently to all of its leases. The Group plans to apply IFRS 16 using the modified retrospective approach. Therefore, the cumulative effect of adopting IFRS 16 will be recognised as an adjustment to the opening balance of retained earnings at 1 January 2019, with no restatement of comparative information.

When applying the modified retrospective approach the leases previously classified as operating leases under IAS 17, the lessee can elect, on a lease-by-lease basis, whether to apply a number of practical expedients on transition. The Group is assessing the potential impact of using these practical expedients.

The Group is not required to make any adjustments for any leases in which it is a lessor except where it is an intermediate lessor in a sub-lease.

IFRIC 23: *Uncertainty over Income Tax Treatments* was issued in June 2017. The Interpretation addresses the accounting for income taxes when tax treatments involve uncertainty that affects the application of IAS 12. Initial work performed, indicates that there will be limited impact on the financial statements as a result of this standard interpretation.

IFRS 17: *Insurance Contracts* was issued in May 2017. The standard establishes the principles for the recognition, measurement, presentation and disclosure of insurance contracts within the scope of the standard. Initial work performed on the impact of IFRS 17 indicates that there will be a significant impact on the underlying valuation models, systems and processes. The Group is in the process of assessing the requirements of the standard against current data, processes and valuation models and is expected to finalise this assessment during 2019.

BASIS OF PRESENTATION AND ACCOUNTING POLICIES (continued)

Other

The group does not expect any other standards issued by the IASB, but not yet effective, to have a material impact on the group.

Glossary of terms and definitions

A glossary containing explanations of technical terms used in these financial statements is presented on page 245 of the Integrated report online.

The following sections provide additional information in respect of the presentation of selected items in the Group financial statements on pages 64 to 138.

Use of estimates, assumptions and judgements

The preparation of the financial statements necessitates the use of estimates, assumptions and judgements. These estimates and assumptions affect items reported in the Group Statement of Financial Position and Statement of Comprehensive Income, as well as contingent liabilities. The major items subject to the application of estimates, assumptions and judgements include:

- Impairment of goodwill and value of business acquired;
- The liability arising from claims under general insurance contracts;
- The fair value of unlisted investments;
- The valuation of policy liabilities;
- Impairment of financial assets;
- Classification of financial assets;
- Potential claims and contingencies; and
- The consolidation of investment funds where the Group has less than a majority interest.

Although estimates are based on management's best knowledge and judgement of current facts as at the Statement of Financial Position date, the actual outcome may differ from these estimates, possibly significantly. Refer to note 24 for further information on critical estimates and judgements and note 27 for information on contingencies.

Policyholders' and shareholders' activities

The Group financial statements set out on pages 64 to 138 include the consolidated activities of the policyholders and shareholders. Separate financial information on the activities of the shareholders of the Sanlam Group is disclosed on pages 173 to 236 of the Integrated report online.

The assets, liabilities and activities of the policyholders and shareholders in respect of the life insurance businesses are managed separately and are governed by the valuation basis for policy liabilities and profit entitlement rules, which are determined in accordance with prevailing legislation, IFRS, generally accepted actuarial practice and the stipulations contained in the Sanlam Life demutualisation proposal. The valuation basis in respect of policy liabilities and the profit entitlement of shareholders are set out on pages 61 to 63.

Insurance contracts

The disclosure of claims experience in claims development tables is based on the period when the earliest material claims arose for which there is still uncertainty about the amount and timing of the claim payments.

Cash, deposits and similar securities

Cash, deposits and similar securities include bank account balances, call, term and negotiable deposits, promissory notes and money market collective investment schemes. A distinction is made between:

- Cash, deposits and similar securities included in the asset mix of policyholders' and shareholders' fund investment portfolios, which are disclosed as investments in the statement of financial position; and
- Working capital balances that are disclosed as working capital assets, apart from bank overdrafts, which are disclosed as working capital liabilities.

Financial instruments

Owing to the nature of the Group's business, financial instruments have a significant impact on the Group's financial position and performance. Audited information in respect of the major categories of financial instruments and the risks associated therewith are provided in the following sections:

- Audited Capital and Risk Management report on pages 11 to 56;
- Note 7: Investments;
- Note 14: Long-term policy liabilities;
- Note 15: Term finance; and
- Note 24: Critical accounting estimates and judgements.

Segmental information

The Group reports in six distinct segments, grouped according to the similarity of the solution offerings and market segmentations of the various businesses. The six segments are:

- Sanlam Personal Finance;
- Sanlam Emerging Markets;
- Sanlam Investment Group;
- Sanlam Corporate;
- Santam; and
- Group Office and Other.

The decentralised nature of the Group businesses facilitates the allocation of costs between them as the costs are directly attributable to the different businesses. Inter-segment transfers are estimated to reflect arm's length prices.

The audited segmental information is disclosed in the Shareholders' information on pages 173 to 236 of the Integrated report online. Refer to the Financial Review on pages 85 to 107 of the Integrated report online for additional information on these business segments and to the Group structure on page 13 of the Integrated report online for a description of the main businesses and the cluster to which they are allocated.

Accounting policies

The Sanlam Group has identified the accounting policies that are most significant to its business operations and the understanding of its results. These include policies relating to insurance liabilities, deferred acquisition costs, the ascertainment of fair values of financial assets, financial liabilities and derivative financial instruments, and the determination of impairment losses. In each case, the determination of these is fundamental to the financial results and position, and requires management to make complex judgements based on information and financial data that may change in future periods. Since these involve the use of assumptions and subjective judgements as to future events and are subject to change, the use of different assumptions or data could produce materially different results. These policies (as set out in the relevant notes to the financial statements) are in accordance with and comply with IFRS and have been applied consistently for all periods presented unless otherwise noted.

Basis of consolidation

Subsidiaries and consolidated funds are entities that are controlled by Sanlam Limited or any of its subsidiaries. The Group has control over an entity where it has the right to or is exposed to variable returns and has the power, directly or indirectly, to affect those returns. Specifically, the Group controls an entity if and only if the Group has:

- Power or existing rights over the entity or investee that give it the ability to direct relevant activities;
- Exposure or rights to variable returns from its involvement with the investee; and
- The ability to use its power over the investee to affect its returns.

When the Group has less than a majority of the voting or similar rights, the Group consider all relevant facts and circumstances in assessing whether it has power over an investee, including:

- The contractual arrangement with the other vote holders of the investee;
- Rights arising from other contractual arrangements; and
- The Group's voting rights and potential voting rights.

The Group re-assesses on a continuous basis whether or not it controls an investee.

The purchase method of accounting is applied to account for acquisitions of subsidiaries. The cost of an acquisition is measured as the fair value of consideration transferred, equity instruments issued and liabilities assumed at the date of exchange. Costs directly attributable to an acquisition are expensed in the Statement of Comprehensive Income. Identifiable assets and liabilities acquired and contingent liabilities assumed are recognised at fair value at acquisition date. The excess of the cost of an acquisition over the Group's share of the fair value of the net identifiable assets and contingent liabilities represents goodwill and is accounted for in terms of the accounting policy note for goodwill. If the cost of an acquisition is less than the fair value of the net identifiable assets and contingent liabilities, the difference is recognised in the Statement of Comprehensive Income.

The results of subsidiaries and consolidated funds are included from the effective dates when the Group obtains control to the effective dates when the Group ceases to have control, using accounting policies uniform to the Group. Intergroup transactions, balances and unrealised profits on intergroup transactions are eliminated. Unrealised losses are also eliminated unless the transaction indicates the impairment of the asset transferred.

The interest of non-controlling shareholders in subsidiaries is stated at the non-controlling shareholders' share of the recognised values of the subsidiaries' assets and liabilities. Net losses attributable to non-controlling shareholders in excess of the non-controlling interest are recognised as negative reserves against non-controlling shareholders' interest.

A financial liability is recognised, and classified as at fair value through profit or loss, for the fair value of external investors' interest in consolidated funds where the issued units of the fund are classified as financial liabilities in terms of IFRS. Changes in the fair value of the external investors' liability are recognised in the Statement of Comprehensive Income. In all other instances, the interests of external investors in consolidated funds are not financial liabilities and are recognised as non-controlling shareholders' interest.

BASIS OF PRESENTATION AND ACCOUNTING POLICIES (continued)

The Group offers cell captive facilities to clients. A cell captive is a contractual arrangement entered into by the Group with a cell owner, whereby the risks and rewards associated with certain insurance activities accrue to the cell shareholder. Cell captives allow clients to purchase non-convertible preference shares in the registered insurance company which undertakes the professional insurance management of the cell, including: underwriting, reinsurance, claims management, actuarial and statistical analysis, investment and accounting services. The terms and conditions are governed by the shareholders' agreement. There are currently two distinct types of cell captive arrangements

- First party – where the risks that are being insured relate to the cell shareholders' own operations or operations within the cell shareholders' group of companies. The cell shareholder and the policyholder are considered the same person. Where more than one contract is entered into with a single counterparty, it shall be considered a single contract, and the shareholder and insurance agreement are considered together for risk transfer purposes. As these contracts are a single contract there is no significant risk transfer and such cell captive facilities are accounted for as investment contracts.
- Third party – where the cell shareholder provides the opportunity to its own client base to purchase branded insurance products. The company is the principle to the insurance contract, although the business is underwritten on behalf of the cell shareholder. However, the shareholder's agreement determines that the cell shareholders remain responsible for the solvency of the cell captive arrangements. In substance, the insurance company therefore reinsures this business to the cell shareholder as the cell shareholder remains responsible for the solvency of the cell captive arrangement.

The cell shareholder's interest represents the cell shareholder's funds held by the insurer and is included under liabilities due to cell shareholders. The carrying value of amounts due to cells is the consideration received for preference shares plus the accumulated funds in respect of business conducted in the cells less repayment to cells.

Foreign currencies

Transactions and balances

Foreign currency transactions are translated to functional currency, i.e. the currency of the primary economic environment in which each of the Group's entities operate, at the exchange rates on transaction date. Monetary assets and liabilities are translated to functional currency at the exchange rates ruling at the financial period-end. Non-monetary assets and liabilities carried at fair value are translated to functional currency at the exchange rates ruling at valuation date. Non-monetary assets and liabilities carried at historic cost are translated to functional currency at the exchange rates ruling at the date of initial recognition. Exchange differences arising on the settlement of transactions or the translation of monetary assets and liabilities (excluding investment assets and liabilities) are recognised in the Statement of Comprehensive Income as financial services income. Exchange differences on non-monetary assets and liabilities and monetary assets and liabilities classified as investment assets and liabilities, such as equities and foreign interest-bearing investments, are included in investment surpluses.

Foreign operations

Statement of Comprehensive Income items of foreign operations (including foreign subsidiaries, associates and joint ventures) with a functional currency different from the presentation currency, are converted to South African rand at the weighted average exchange rates for the financial year, except where the average exchange rate is not representative of the timing of specific items, in which instances the exchange rate on transaction date is used. The closing rate is used for the translation of assets and liabilities, including goodwill, intangible assets and fair value adjustments arising on the acquisition of foreign entities. At acquisition, equity is translated at the rate ruling on the date of acquisition. Post-acquisition equity is translated at the rates prevailing when the change in equity occurred. Exchange differences arising on the translation of foreign operations are transferred to a foreign currency translation reserve until the disposal of the net investment when it is released to the Statement of Comprehensive Income.

POLICY LIABILITIES AND PROFIT ENTITLEMENT

Introduction

The valuation basis and methodology used to calculate the policy liabilities of all material lines of long-term insurance business and the corresponding shareholder profit entitlement for Sanlam Life are set out below. The same valuation methodology, where applicable, is applied in all material respects to value the policy liabilities of Sanlam Developing Markets, Channel Life, Safrican Insurance Company and Sanlam Emerging Markets, as well as investment contracts issued by Sanlam Investments and Pensions, unless otherwise stated. The valuation methodology in respect of insurance contracts issued by Sanlam Investments and Pensions is not presented in view of their relatively immaterial contribution to earnings and the relative small size of their insurance contract liabilities.

The valuation basis and methodology, which comply with South African actuarial guidelines and requires minimum liabilities to be held based on a prospective calculation of policy liabilities, serves as a liability adequacy test. No adjustment is required to the value of the liabilities at 31 December 2018 as a result of the aforementioned adequacy test.

The valuation basis and methodology comply with the requirements of IFRS.

Where the valuation of long-term policy liabilities is based on the valuation of supporting assets, the assets are valued on the basis as set out in the accounting policy for investments, with the exception of investments in treasury shares, subsidiaries, associated companies, joint ventures and consolidated funds, which are also valued at fair value.

Classification of contracts

A distinction is made between investment contracts without discretionary participation features (DPF) (which fall within the scope of IFRS 9 – Financial Instruments), investment contracts with DPF and insurance contracts (where the Financial Soundness Valuation (FSV) method continues to apply, subject to certain requirements specified in IFRS 4 – Insurance Contracts).

A contract is classified as insurance where Sanlam accepts significant insurance risk by agreeing with the policyholder to pay benefits if a specified uncertain future event (the insured event) adversely affects the policyholder or other beneficiary. Significant insurance risk exists where it is expected that for the duration of the policy or part thereof, policy benefits payable on the occurrence of the insured event will significantly exceed the amount payable on early termination, before allowance for expense deductions at early termination. Once a contract has been classified as an insurance contract, the classification remains unchanged for the remainder of its lifetime, even if the insurance risk reduces significantly during this period.

Policy contracts not classified as insurance contracts are classified as investment contracts and comprise the following categories:

- Investment contracts with DPF;
- Investment contracts with investment management services; and
- Other investment contracts.

An investment contract with DPF entitles the policyholder to receive benefits or bonuses in addition to guaranteed benefits. These additional benefits have the following features:

- The benefits constitute a significant portion of each policy's total benefits;
- The timing and amount of the benefits are at the discretion of the Sanlam Group, which has to be exercised in a reasonable way; and
- The benefits are based on the investment performance of a specified pool of underlying assets.

All investment contracts that fall within the scope of IFRS 9 (i.e. all investment contracts without DPF) are designated as at fair value through profit or loss.

Insurance contracts and investment contracts with DPF

The actuarial value of the policy liabilities is determined using the FSV method as described in professional guidance note, SAP 104 issued by the Actuarial Society of South Africa (Actuarial Society), which is consistent with the valuation of assets at fair value as described in the accounting policy for investments. The underlying philosophy is to recognise profits prudently over the term of each contract consistent with the work done and risk borne. In the valuation of liabilities, provision is made for:

- The best estimate of future experience;
- The compulsory margins prescribed in SAP104; and
- Discretionary margins determined to release profits to shareholders consistent with policy design and company policy.

The value of policy liabilities at 31 December 2018 exceeds the minimum requirements in terms of SAP 104 and APN 110.

The application of actuarial guidance, as set out in SAP 104 and APN 110 issued by the Actuarial Society, is described below in the context of the Group's major product classifications.

Best estimate of future experience

The best estimate of future experience is determined as follows:

- Future investment return assumptions are derived from market yields of fixed interest securities on the valuation date, with adjustments for the other asset classes.
- The appropriate asset composition of the various asset portfolios, investment management expenses, taxation at current tax rates and charges for investment guarantees are taken into account.

POLICY LIABILITIES AND PROFIT ENTITLEMENT (continued)

- For some of the Group's African operations, where long-term fixed interest markets are underdeveloped, investment return assumptions are based on an assessment of longer-term economic conditions. The future investment returns for Namibian businesses are based on the market yields of South African fixed interest securities on the valuation date. Refer to note 4 on page 209 of the Integrated Report online for investment return assumptions per asset class.
- Future expense assumptions are based on the 2018 actual expenses and escalated at estimated expense inflation rates per annum, with a higher rate assumed for legacy business. The allocation of initial and maintenance expenses is based on functional cost analyses and reflects actual expenses incurred during 2018. Allowance is made for project expenses consistently with the best estimate used for embedded value purposes.
- Assumptions with regard to future mortality, disability and disability payment termination rates are consistent with Sanlam's recent experience or expected future experience if this would result in a higher liability. In particular, mortality and disability rates are adjusted to allow for expected deterioration in mortality rates as a result of Aids and for expected improvements in mortality rates in the case of annuity business.
- Persistency assumptions with regard to lapse, surrender and paid-up rates are consistent with Sanlam's recent experience or expected future experience if this would result in a higher liability.

Asset portfolios

Separate asset portfolios are maintained in support of policy liabilities for each of the major lines of business; each portfolio having an asset mix appropriate for the specific product. Bonus rates are declared for each class of participating business in relation to the funding level of each portfolio and the expected future net investment return on the assets of the particular investment portfolio.

Bonus stabilisation reserves

Sanlam Life's individual and group stabilised bonus portfolios are valued on a retrospective basis. If the fair value of the assets in such a portfolio is greater than the policyholders' investment accounts (net premiums invested plus declared bonuses), a positive bonus stabilisation reserve is created, which will be used to enhance future bonuses. Conversely, if assets are less than the investment accounts, a negative bonus stabilisation reserve is created. A negative bonus stabilisation reserve will be limited to the amount that the Statutory Actuary expects will be recovered through the declaration of lower bonuses during the ensuing three years, if investment returns are in line with long-term assumptions. Bonus stabilisation reserves are included in long-term policy liabilities.

Provision for future bonuses

Provision was made for future bonuses so that each asset portfolio, less charges for expenses (including investment guarantee charges) and profit loadings, for each line of business would be fully utilised for the benefit of the policyholders of that portfolio.

Reversionary bonus business

The liability is set equal to the fair value of the underlying assets. This is equivalent to a best estimate prospective liability calculation using the bonus rates as set out above, and allowing for the shareholders' share of one-ninth of the cost of these bonuses.

The present value of the shareholders' entitlement is sufficient to cover the compulsory margins required in the Actuarial Society guidelines for the valuation of policy liabilities. These margins are thus not provided for in addition to the shareholders' entitlement.

Individual stable bonus, linked and market-related business

For investment policies where the bonuses are stabilised or directly related to the return on the underlying investment portfolios, the liabilities are equated to the retrospectively accumulated fair value of the underlying assets. These retrospective liabilities are higher than the prospective liabilities calculated as the present value of expected future benefits and expenses less future premiums at the relevant discount rates.

To the extent that the retrospective liabilities exceed the prospective liabilities, the valuation contains discretionary margins. The valuation methodology results in the release of these margins to shareholders on a fees minus expenses basis consistent with the work done and risks borne over the lifetime of the policies.

An exception to the above relates to policy liabilities in respect of Sanlam Developing Markets' and Channel Life's individual Universal Life business (including stable bonus and market-linked business), which are valued prospectively. Negative values are not allowed in respect of any of these policies.

Group stable bonus business

In the case of Group policies where bonuses are stabilised, the liabilities are equated to the fair value of the retrospectively accumulated underlying assets.

Future fees are expected to exceed expenses, including allowance for the prescribed margins. These excesses are released to shareholders consistent with the work done and risks borne over the lifetime of the policies.

Participating annuity business

The liabilities are equated to the fair value of the retrospectively accumulated underlying assets. This is equivalent to a best estimate prospective liability calculation allowing for future bonus rates as described above and expected future investment returns. Shareholder entitlements emerge in line with fees charged less expenses incurred consistent with work done and risks borne over the lifetime of the annuities.

The present value of the shareholders' entitlement is sufficient to cover the compulsory margins for the valuation of policy liabilities. The compulsory margins are thus not provided for in addition to the shareholders' entitlement.

Non-participating annuity business

Non-participating life annuity instalments and future expenses in respect of these instalments are discounted at the zero-coupon yield curve adjusted to allow for credit risk and investment administration charges. All profits or losses accrue to the shareholders when incurred.

Other non-participating business

Most of the other non-participating business liabilities are valued on a retrospective basis. The remainder is valued prospectively and contains discretionary margins via either an explicit interest rate deduction of approximately less than 1% on average or by not allowing policies with negative reserves.

For Sanlam Life's non-participating business other than life annuity business, an asset mismatch provision is maintained. The interest and asset profits arising from the non-participating portfolio are added to this provision. The asset mismatch provision accrues to shareholders at the rate of 1,33% monthly, based on the balance of the provision at the end of the previous quarter. The effect of holding this provision is, amongst other purposes, to dampen the impact on earnings of short-term fluctuations in fair values of assets underlying these liabilities. The asset mismatch provision represents a discretionary margin. A negative asset mismatch provision will not be created, but such shortfall will accrue to shareholders in the year in which it occurs.

Provision for HIV/Aids and other pandemics

A specific provision for HIV/Aids-related claims is maintained and included within the related prospective reserves.

A prospective calculation according to the relevant guidelines is performed for Sanlam Life's policies.

Premium rates for Group business are reviewed annually. The HIV/Aids provision is based on the expected HIV/Aids claims in a year and the time that may elapse before premium rates and underwriting conditions can be suitably adjusted should actual experience be worse than expected.

In addition, provision for claims relating to other pandemics is also made based on the estimated additional death claims should a moderate pandemic occur.

Provision for minimum investment return guarantees

In addition to the liabilities described above, a stochastic modelling approach was used to provide for the possible cost of minimum investment return guarantees provided by some participating and market-related policies, consistent with actuarial guidance note APN 110.

Working capital

To the extent that the management of working capital gives rise to profits, no credit is taken for this in determining the policy liabilities.

Reinsurance

Liabilities are valued gross before taking into account reinsurance. Where material, the difference between the gross and net (after reinsurance) value of liabilities is held as a reinsurance asset.

Investment contracts (other than with DPF)

Contracts with investment management services

The liabilities for individual and group contracts are set equal to the retrospectively accumulated fair value of the underlying assets. The profits or losses that accrue to shareholders are equal to fees received during the period concerned plus the movement in the DAC asset less expenses incurred.

Where these contracts provide for minimum investment return guarantees, provision is made for the fair value of the embedded derivative.

Non-participating annuity business

Term annuity instalments and expected future expenses in respect of these instalments are discounted at the zero-coupon yield curve adjusted to allow for credit risk and investment administration charges. All profits or losses accrue to the shareholders when incurred.

Guaranteed plans

Guaranteed maturity values and expected future expenses are discounted at market-related interest rates. All profits or losses accrue to the shareholders when incurred.

⁽¹⁾ A dividend of 312 cents per share (2017: 290 cents per share) was declared in 2019 in respect of the 2018 earnings. Based on the number of shares in issue on declaration date, the total dividend is expected to amount to R6,5 billion (after allowing for treasury shares), but may vary depending on the number of shares in issue on the last day to trade. Dividends proposed or declared after the statement of financial position date are not recognised at the statement of financial position date.

⁽²⁾ Comprises movement in cost of shares held by subsidiaries, the share incentive trust and other consolidated funds.

⁽³⁾ Other comprehensive income include a realisation of a cash flow hedging adjustment of R1 500 million in respect of the acquisition of interests in Saham Finances.

⁽⁴⁾ During the current year IFRS 9 – Financial instruments and IFRS 15 – Revenue from contracts with customers were adopted. Refer to note 35.1 for more information.

NOTES TO THE GROUP FINANCIAL STATEMENTS

for the year ended 31 December 2018

1. Equipment

Equipment is reflected at depreciated cost prices less provisions for impairment in value, where appropriate. Depreciation is provided for on a straight-line basis, taking into account the residual value and estimated useful lives of the assets, which vary between two and 20 years. If the expected residual value is equal to or greater than the carrying value, no depreciation is provided for. The residual values, estimated useful lives and depreciation methods are reviewed at each statement of financial position date and adjusted as appropriate. Cost prices include costs directly attributable to the acquisition of equipment, as well as any subsequent expenditure when it is probable that future economic benefits associated with the item will flow to the Group and the expenditure can be measured reliably. All other expenditure is recognised in the statement of comprehensive income when incurred. Equipment is derecognised at disposal date or at the date when it is permanently withdrawn from use without the ability to be disposed of. The difference between the carrying amount at the date of derecognition and any disposal proceeds, as applicable, is recognised in the statement of comprehensive income.

R million	2018	2017

Depreciation	(350)	(287)
Net other movements	8	(22)
Balance at end of the year	1 587	876

2. Owner-occupied properties

Owner-occupied property is property held for use in the supply of services or for administration purposes. These properties are valued at carrying amount less depreciation and provisions for impairment in value, where appropriate. The carrying amount is based on the cost of properties classified as owner-occupied on date of acquisition and the fair value at date of reclassification in instances where properties are reclassified from investment properties to owner-occupied properties. Depreciation is provided for on a straight-line basis, taking into account the residual value and estimated useful life of the property. The residual values, estimated useful lives and depreciation methods are reviewed at each statement of financial position date and adjusted as appropriate. If the expected residual value is equal to or greater than the carrying value, no depreciation is provided for. Owner-occupied property is assessed bi-annually for indicators of impairment. When owner-occupied properties become investment properties, they are reclassified to investment properties at the fair value of the properties at the date of reclassification. The difference between the carrying value and fair value of the properties at the date of reclassification is recognised directly in other comprehensive income as a revaluation surplus. Owner-occupied property is derecognised at disposal date or at the date when it is permanently withdrawn from use without the ability to be disposed of. The difference between the carrying amount at the date of derecognition and any disposal proceeds, as applicable, is recognised in the statement of comprehensive income.

Balance at end of the year	2 010	963

3. Intangible assets arising on acquisition

3.1 Goodwill

Goodwill arises on the acquisition of a subsidiary or the acquisition of a business. It represents the excess of the cost of an acquisition over the Group's share of the fair value of the net identifiable assets of the subsidiary or business at the date of acquisition. Goodwill is not amortised. The gain or loss on the disposal of a subsidiary or business includes the carrying amount of goodwill attributable to the entity or business sold.

Goodwill is not recognised when an interest in an existing subsidiary is increased. The difference between the cost of the acquisition and the minority interest acquired is accounted for directly in equity. When an interest in an existing subsidiary is decreased without a loss of control, the difference between the proceeds received and the share of the net assets disposed of, including an appropriate portion of the related goodwill, is accounted for directly in equity.

For impairment purposes, the carrying amount of goodwill is allocated to cash generating units at the lowest level of operational activity (business) to which it relates. The carrying amount of goodwill is reviewed bi-annually for impairment and written down where this is considered necessary. Impairment losses in respect of goodwill are recognised in the statement of comprehensive income and are not reversed. Where a number of related businesses acquired in the same business combination are allocated to different Group business divisions, the related goodwill is allocated to those cash generating units that expect to benefit from the synergies of the business combination. The recoverable amount of goodwill has been determined based on the various businesses' valuations, as included in Group Equity Value plus a multiple of life insurance value of new business (representing the total value in use for entities at embedded value), less the consolidated net asset value of the respective businesses. Refer to page 184 of the online Integrated Report for an analysis of Group Equity Value as well as pages 209 to 211 for valuation assumptions used.

Goodwill in respect of associated companies and joint ventures is included in the carrying value of investments in associated companies and joint ventures. For impairment purposes each investment is tested for impairment individually and goodwill is not tested separately from the investment in associated companies and joint ventures, nor is any impairment allocated to any underlying assets.

Balance at end of the year	19 985	4 158

Goodwill acquired through business combinations relates mainly to the acquisitions of Saham Finances, ACA Employee Benefits and Nucleus contributing R15 421 million, R21 million and R436 million respectively (2017: BrightRock Holdings and Sanlam Investments East Africa). Disposals relate to the sale of a subsidiary of Saham Finances.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

3. Intangible assets arising on acquisition (continued)

3.2 Value of business acquired

The value of insurance and investment management services contracts acquired (VOBA) in a business combination is recognised as an intangible asset. VOBA, at initial recognition, is equal to the discounted value, using a risk-adjusted discount rate, of the projected stream of future after-tax profit that is expected to flow from the book of business acquired, after allowing for the cost of capital supporting the business, as applicable. The valuation is based on the Group's actuarial and valuation principles as well as assumptions in respect of future premium income, fee income, investment return, policy benefits, costs, taxation, mortality, morbidity and surrenders, as appropriate.

VOBA is amortised on a straight-line basis over the expected life of the client relationships underlying the book of business acquired, currently 25 years for Sanlam Developing Markets, 15 years for Channel Life, Brackenham Holdings and Sanlam Private Investments UK, 11 years for BrightRock Holdings and 10 years for MCIS Insurance, Saham Finances and Nucleus, the major businesses to which value of business acquired relates. VOBA is tested for indicators of impairment on a bi-annual basis and written down for impairment where this is considered necessary. Where impairment events subsequently reverse, impairments are reversed up to a maximum of what the amortised cost would have been. VOBA is derecognised when the related contracts are terminated, settled or disposed of. For impairment testing purposes, the value of business acquired is allocated to cash-generating units at the lowest level of operational activity (business) to which it relates. The recoverable amount has been determined based on the various businesses' contribution to Group Equity Value plus a multiple of life insurance value of new business (representing the total value in use for entities at embedded value), less the consolidated net asset value of the respective businesses. Refer to page 184 of the online Integrated Report for an analysis of Group Equity Value. The gain or loss on the disposal of a subsidiary or business includes the carrying amount of VOBA attributable to the entity or business sold.

Other	136	130
Balance at end of the year	9 985	1 930

VOBA acquired through business combinations relates mainly to the acquisition of Saham Finances (Sanlam Emerging Markets), Bridge Fund Managers (Sanlam Investment Group), ACA Employee Benefits (Sanlam Corporate) and Nucleus (Sanlam UK), contributing R7 473 million, R99 million, R190 million and R920 million on a gross basis respectively.

4. Other intangibles

Acquired intangible assets are recognised at cost on acquisition date. Subsequent to initial recognition, these assets are reflected at their depreciated cost prices less provisions for impairment in value, where appropriate. Amortisation is provided for on a straight-line basis, taking into account the residual value and estimated useful lives. The residual values, estimated useful lives of the assets and depreciation methods are reviewed at each statement of financial position date and adjusted, as appropriate. Other intangible assets are assessed for indicators of impairment on a bi-annual basis and written down for impairment where this is considered necessary. The recoverable amount has been determined based on the various businesses' contribution to Group Equity Value, less the related net asset value. Refer to page 184 of the online Integrated Report for an analysis of Group Equity Value.

Costs associated with software development for internal use are capitalised if the completion of the software development is technically feasible, the Group has the intent and ability to complete the development and use the asset, the costs can be reliably measured and will generate future economic benefits.

No value is attributed to internally developed brands or similar rights. Costs incurred on these items are charged to the statement of comprehensive income in the period in which they are incurred.

R million	2018	2017

Accumulated impairment	(563)	(432)

Other intangibles acquired through business combinations relates to the acquisition of Saham Finances.

5. Deferred acquisition costs

Incremental costs of obtaining investment contracts with investment management services are capitalised to a deferred acquisition cost (DAC) asset if they are separately identifiable, can be measured reliably and it is probable that they will be recovered.

DAC are amortised to the statement of comprehensive income over the term of the contracts as the related services are rendered and revenue recognised, which varies from year to year dependent on the outstanding term of the contracts in force. The DAC asset is tested for impairment bi-annually and written down when it is not expected to be fully recovered from fee income.

Deferred acquisition costs acquired through business combinations relates to the acquisition of Saham Finances.

⁽¹⁾ This relates to the derecognition of deferred acquisition costs of Glacier Financial Holdings with a corresponding derecognition in deferred revenue liabilities. This had no impact on earnings.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

6. Long-term reinsurance assets

Contracts entered into with reinsurers under which the Group is compensated for losses on one or more long-term policy contracts issued by the Group and that meet the classification requirements for insurance contracts are classified as long-term reinsurance contracts. The expected claims and benefits to which the Group is entitled under these contracts are recognised as assets. The Group assesses its long-term reinsurance assets for indicators of impairment bi-annually. If there is objective evidence that the reinsurance asset is impaired, the carrying amount is reduced to a recoverable amount, and the impairment loss is recognised in the statement of comprehensive income.

Amounts due from reinsurers in respect of claims incurred by the Group that are reinsured, are included in trade and other receivables (refer to note 10.1).

7. Investments

7.1 Properties

Investment properties comprise properties held to earn rental income and/or for capital appreciation. Investment properties are carried at fair value, less the cumulative straight-line rental adjustment (refer to the accounting policy for investment income). Valuations are carried out monthly by valuers who possess appropriate qualifications and extensive experience in property valuations. Changes in the fair value of investment properties are recognised in the statement of comprehensive income as investment surpluses.

When investment properties become owner-occupied, they are reclassified to owner-occupied properties at a deemed cost equal to the fair value of the investment properties at the date of reclassification. When owner-occupied properties become investment properties, they are reclassified to investment properties at a deemed cost equal to the fair value of the properties at the date of reclassification. The difference between the carrying value and fair value of the properties at the date of reclassification to investment properties is recognised in other comprehensive income as a revaluation surplus.

Investment properties are derecognised when they have either been disposed of or when they are permanently withdrawn from use and no future benefit is expected from their disposal.

7.2 Equity-accounted investments

Associated companies

An associated company is an entity, not being a subsidiary, in which the Sanlam Group has a long-term investment and over which it has the ability to exercise significant influence, being the ability to participate in the financial and operating policies of the entity without being able to jointly control or control those policies by virtue of a majority vote.

Investments in associated companies are recognised on the date significant influence is obtained and derecognised on the date significant influence is lost. Investments in associated companies, other than those investments, or portions thereof, held by investment-linked life insurance funds, are initially recognised at cost. The results of these associated companies after initial recognition are accounted for using the equity method of accounting, whereby the Group's share of associated companies' post-acquisition profit or loss is recognised in the Group statement of comprehensive income as equity-accounted earnings, and the Group's share of associated companies' other post-acquisition movement in equity reserves (other than those related to dividends) is recognised in reserves, with a corresponding adjustment to the carrying value of investments in associated companies. Net losses are only recognised to the extent of the net investment in an associated company, unless the Group has incurred obligations or made payments on behalf of the associated company. Equity-accounted earnings are based on accounting policies uniform to those of the Group. The carrying amount is reviewed bi-annually for indicators of impairment and written down where this is considered necessary. The carrying value of the investment in an associated company includes goodwill. Investments in associated companies, or portions thereof, held by investment-linked life insurance funds are treated as investments at fair value through profit or loss and are not equity-accounted.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

7. Investments (continued)

7.2 Equity-accounted investments (continued)

Joint ventures

A joint venture is a contractual arrangement whereby two or more parties undertake an economic activity that is subject to joint control.

The results of joint ventures, other than those held by investment-linked life insurance funds, are accounted for using the equity method of accounting, whereby the Group's share of the joint ventures' profit or loss is recognised in the Group statement of comprehensive income as equity-accounted earnings, and the Group's share of joint ventures' post-acquisition movement in reserves is recognised in reserves, with a corresponding adjustment to the carrying value of investments in joint ventures. Net losses are only recognised to the extent of the net investment in a joint venture, unless the Group has incurred obligations or made payments on behalf of the joint venture. Equity-accounted earnings are based on accounting policies uniform to those of the Group. The carrying value of the investment in a joint venture is reviewed bi-annually for indicators of impairment and written down when this is considered necessary. The carrying value of the investment in a joint venture includes goodwill.

Investments in joint ventures, or portions thereof, held by investment-linked life insurance funds are treated as investments at fair value through profit or loss and are not equity-accounted.

7.3 Other investments

Other investments comprise:

- Equities and similar securities;
- Interest-bearing investments;
- Structured transactions (including non-trading derivatives);
- Investment funds; and
- Cash, deposits and similar securities.

These investments are either classified as subsequently measured at fair value through profit or loss (measured at fair value) or at amortised cost (measured at amortised cost), as described in the financial instruments accounting policy note. Loans of investment scrip are not treated as sales and purchases.

Structured transactions

Structured transactions include foreign exchange contracts, interest rate futures, forward rate agreements, currency and interest rate swaps, derivatives, structured notes, collateralised securities, credit default swaps, currency, interest rate and equity options and other derivative financial instruments that are measured at fair value.

Fair values are obtained from quoted market prices. In the absence of quoted market prices the Group uses valuation techniques that incorporate factors that market participants would consider in setting the price and are consistent with accepted economic methodologies for pricing derivatives such as discounted cash flow models and option pricing models, as appropriate. The Group calibrates its valuation techniques against market transactions or any available observable market data. Day one gains or losses on structured transactions measured using these valuation techniques are recognised in the statement of comprehensive income to the extent that they arise from a technique that incorporates only variables based on observable market data and there has been a change in one of these variables (including time). If there has been no change in one of these variables, the gains or losses are deferred, and recognised in the statement of comprehensive income over the life of the instrument.

The Group does not separate embedded derivatives that meet the definition of an insurance contract or relate to investment contracts recognised at fair value.

Derivatives are used for trading purposes by Sanlam Capital Markets and for non-trading purposes by other Group businesses. The fair values related to trading derivatives are included in trade and other receivables and the fair values of non-trading derivatives are included in the structured transactions. Non-trading transactions are those which are held for accounting and economic hedging purposes as part of the Group's risk management strategy against assets, liabilities, positions or cash flows measured at fair value, as well as structures incorporated in the product design of policyholder products.

Structured transaction liabilities are classified as mandatorily measured at fair value through profit or loss.

Cash, deposits and similar securities

Cash, deposits and similar securities consist of cash at hand, call deposits at banks, negotiable certificates of deposit and other short-term highly liquid investments.

⁽¹⁾ The amount of change, during the period and cumulatively, in the fair value through profit and loss that is attributable to change in the credit risk of the financial asset is determined as the change triggered by factors other than changes in benchmark interest rate. The impact of changes in credit risk for 2018 and 2017 was not material. For financial assets designated at fair value through profit or loss, the maximum exposure to credit risk is equivalent to the carrying amount of the financial asset.

⁽²⁾ The estimated fair value of investments valued at amortised cost amounts to R6 947 million (2017: R1 354 million). These are classified as level 3 instruments and the valuation is based on discounted cash flows.

7.3.2 Investments other than equities and similar securities, equity-accounted investments and properties (continued)

Reconciliation of expected credit losses

R million	2018		
	12-month ECL	Lifetime ECL (not credit impaired)	Lifetime ECL (credit impaired)
Corporate interest bearing investments	12	-	-
Other interest bearing investments	167	14	3

Interest bearing investments that are rated between AAA and BBB are considered to have a lower credit risk at the reporting date and the loss allowance is therefore measured at an amount equal to the 12 month expected credit losses. At the reporting date, the credit risk of interest bearing investments rated between BB and CCC have significantly increased since initial recognition and the loss allowance is therefore measured at an amount equal to lifetime expected credit losses. The impairment model is based on the study of historical data and the forward-looking information. The probabilities of default and the loss given default are extracted from the reports published by the rating agencies annually. When the issuer's rating deteriorates significantly it is indicative of a significant increase in credit risk since initial recognition.

7.4 Investment return

Investment income

Investment income includes interest, net rental income and dividend income received. Interest income is accounted for on a time proportionate basis that takes into account the effective yield on the asset and includes the income earned from interest margin business.

Rental income is recognised on an accrual basis, apart from operating leases that contain fixed escalation clauses, where it is recognised on a straight-line basis over the lease term. The difference between rental income on a straight-line and accrual basis is recognised as part of the carrying amount of properties in the statement of financial position.

Dividend income is recognised once the last day for registration has passed. Capitalisation shares received in terms of a capitalisation issue from reserves, other than share premium or a reduction in share capital, are treated as dividend income.

Investment surpluses

Investment surpluses consist of net realised gains and losses on the sale of investments and net unrealised fair value gains and losses on the valuation of investments at fair value, excluding investments relating to capital market activities (refer financial services income policy note for presentation of gains and losses on capital market investments). Costs directly attributable to the acquisition of financial assets classified as at fair value through profit or loss are recognised in the statement of comprehensive income as investment surpluses. Investment surpluses are recognised in profit or loss in the statement of comprehensive income on the date of sale or upon valuation to fair value.

8. Taxation

Deferred tax

Deferred tax is provided for all temporary differences between the tax bases of assets and liabilities and their carrying values for financial reporting purposes using the liability method, except for:

- Temporary differences relating to investments in subsidiaries, associated companies and joint ventures where the Group controls the timing of the reversal of the temporary differences and it is probable that the temporary differences will not reverse in the foreseeable future; and
- Temporary differences arising from the initial recognition of assets or liabilities in transactions other than business combinations that at transaction date do not affect either accounting or taxable profit or loss.

The amount of deferred tax provided is based on the expected realisation or settlement of the deferred tax assets and liabilities using tax rates enacted or substantively enacted at the statement of financial position date. Deferred tax assets relating to unused tax losses are recognised to the extent that it is probable that future taxable profit will be available against which the unused tax losses can be utilised. Deferred tax balances are reflected at current values and have not been discounted.

Normal tax

Current income tax is provided in respect of taxable income at the amount expected to be paid to (recovered from) the taxation authorities, using the tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period.

Adjusted for:		
Non-taxable income	(4,5)	(5,7)
Disallowable expenses	2,7	1,5
Utilisation of assessed losses ⁽¹⁾	1,4	-
Investment surpluses	(6,3)	(1,0)
Foreign tax rate differential	0,1	(1,4)
Policyholders	2,8	5,5
Other fund transfers	(0,2)	(0,1)
Prior year adjustment	(0,2)	-
Other	0,7	(0,2)
Effective tax rate	24,5	26,6

Non-taxable income relates primarily to equity-accounted earnings and dividend income. Disallowable expenses vary depending on the jurisdiction and include non-deductible impairments.

⁽¹⁾ This reconciling item is as a result of assessed losses recognised relating to policyholder funds.

9. General insurance technical provisions

Outstanding claims

Liabilities for outstanding claims are estimated using the input of assessments for individual cases reported to the Group and statistical analyses for the claims incurred but not reported and to estimate the expected ultimate cost of more complex claims that may be affected by external factors (such as court decisions). The Group does not discount its liabilities for unpaid claims.

Unearned premiums

General insurance premiums are recognised as financial services income proportionally over the period of coverage. The portion of premiums received on in-force contracts that relates to unexpired risks at the statement of financial position date is reported as an unearned premium liability.

General insurance technical assets

The benefits to which the Group is entitled under its general reinsurance contracts are recognised as general insurance technical assets. These assets represent longer-term receivables that are dependent on the expected claims and benefits arising under the related reinsured insurance contracts. Amounts recoverable from reinsurers are measured consistently with the amounts associated with the reinsured insurance contracts and in accordance with the terms of each reinsurance contract. In certain cases a reinsurance contract is entered into retrospectively to reinsure a notified claim under the Group's property insurance contracts. Where the premium due to the reinsurer differs from the liability established by the Group for the related claim, the difference is amortised over the estimated remaining settlement period. Commissions and other incremental acquisition costs related to securing new contracts and renewing existing contracts are capitalised to deferred acquisition cost assets and amortised to the statement of comprehensive income over the period in which the related premiums are earned. All other costs are recognised as expenses when incurred. The Group assesses its general insurance technical assets for impairment on a bi-annual basis. If there is objective evidence that an asset is impaired, the Group reduces the carrying amount of the asset to its recoverable amount and recognises the impairment loss in the statement of comprehensive income.

Salvage and subrogation reimbursements

Some insurance contracts permit the Group to sell (usually damaged) property acquired in settling a claim (salvage). The Group may also have the right to pursue third parties for payment of some or all costs (subrogation). Estimates of salvage recoveries are included as an allowance in the measurement of the insurance liability for claims, and salvage property is recognised in other assets when the liability is settled. The allowance is the amount that can reasonably be recovered from the disposal of the property. Subrogation reimbursements are also considered as an allowance in the measurement of the insurance liability for claims and are recognised in other assets when the liability is settled. The allowance is the assessment of the amount that can be recovered from the action against the liable third party.

10. Trade receivables and payables

10.1 Trade and other receivables

Trade and other receivables are measured in accordance with the classification categories below.

Trading account assets include equities and similar securities, interest-bearing instruments and derivative financial instruments relating to the trading transactions undertaken by the Group for market making, to service customer needs, for proprietary purposes, as well as any related economic hedging transactions. These transactions are marked-to-market (fair values) after initial recognition and any gains or losses arising are recognised in the statement of comprehensive income as financial services income. The fair values related to such contracts and commitments are determined on the same basis as described for non-trading instruments in the policy note for financial instruments and are reported on a gross basis in the statement of financial position as positive and negative replacement values to the extent that set-off is not required by IAS 32 - Financial Instruments: Disclosure and Presentation.

Accrued investment income is classified in accordance with the classification of the asset that the investment income stems from to the extent that it forms part of the carrying value of the instrument.

Contract receivables are recognised when performance obligations are complete, but the compensation has not yet been received. Contract receivables are unconditional rights to consideration. A right to consideration is unconditional if only the passage of time is required before payment becomes due. Contract receivables are presented separately from contract assets and cannot be netted off against contract liabilities.

General insurance related receivables:

Santam:

Provisions for impairment are based on the recoverability of individual loans and receivables. The impairment model is based on the study of historical data and the forward-looking information.

It is considered that there is evidence of impairment if any of the following indicators are present: Significant financial difficulties, probability that the debtor will enter bankruptcy or financial reorganisation, and default or delinquency in payments (more than 30 days overdue). The loss rates are adjusted to reflect current and forward looking information on macro-economic factors, such as the socio-economic environment affecting the ability of the debtors to settle the receivables.

Saham Finances:

A provision matrix based on historical default rates adjusted for forward-looking information is used to estimate the amount of expected losses on receivables.

Unpaid premiums (excluding litigation) is analysed by homogeneous risk classes. Annual recovery rates are then estimated by homogeneous class of risk and seniority.

Expected recoveries are determined by applying the estimated recovery rates and then discounted accordingly. The expected credit losses comprise of the difference between the unpaid premiums and the sum of discounted cash flows.

Contentious premiums and significant individual receivables are analysed on a case-by-case basis.

Other receivables:

Expected credit losses have been provided for as follows:

Premiums receivable: 100% of premiums receivable which has been outstanding for longer than 30 days.

Commission receivable (included in accounts receivable):

- 50% of commission receivable in respect of active agents;
- 50% of commission receivable in respect of active sales representatives;
- 100% of commission receivable in respect of inactive sales representatives; and
- Broker commission receivable is based on the debtors which amount due is higher than net present value of unearned commission:
 - o Target of 83% is set as standard provision for brokers whose outstanding balance is higher than the value of unearned commission
 - o 100% of the outstanding amount for terminated brokers with higher risk assessment as determined by broker support.

10.2 Trade and other payables

Trade and other payables are measured in accordance with the classification categories below (refer to the description on the measurement of trading account assets in the accounting policy note for trade and other receivables, which also applies to trading account liabilities, adjusted for non-performance risk). Trading account liabilities consists of borrowings in terms of the commercial programme to fund the activities in the Group, repurchase agreements which fund the long bond positions and which are also used as a source of funding using borrowed bond scrip, CSA collateral and margin received from clients or counter parties, short bond and equity positions and interest rate and equity derivative liabilities.

Life insurance policy claims recorded up to the last day of each financial period and claims incurred but not yet reported (IBNR) are included as part of trade and other payables (refer to note 14.5).

R million	2018	2017
Trading account	16 534	22 994
Accounts payable	21 038	15 129
Policy benefits payable	5 291	4 560
Amounts due to reinsurers	5 017	2 075
Bank overdrafts	964	161
Claims incurred but not reported	1 808	1 547
Operating lease creditor	109	41
Total trade and other payables	50 761	46 507
Classification of trade and other payables:		
Held for trading at fair value	-	22 994
Mandatorily measured at fair value through profit or loss	16 534	-
Designated at fair value through profit or loss ⁽¹⁾	149	-
Other payables at amortised cost	29 963	21 925
Non-financial instruments ⁽²⁾	4 115	1 588
Total trade and other payables	50 761	46 507
Trade and other payables, excluding trading account, are payable within one year. The estimated fair value of other payables at amortised cost approximates the carrying value. The valuation is based on discounted cash flows and is classified as level 3.		
⁽¹⁾ For trade and other payables designated at fair value through profit or loss, the amount contractually payable at maturity is equivalent to the carrying amount of the financial liability.		
⁽²⁾ Non-financial instruments include amounts due to intermediaries, leave pay accrual, deferred share plan liabilities, operating lease creditors, income received in advance and claims incurred but not reported.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

11. Share capital and premium

Share capital is classified as equity where the Group has no obligation to deliver cash or other assets to shareholders.

Incremental costs attributable to the issue or cancellation of equity instruments are recognised directly in equity, net of tax if applicable.

Shares held in Sanlam Limited by policyholder portfolios and subsidiary companies (treasury shares) are recognised as a deduction from equity on consolidation. The cost of treasury shares acquired is deducted from equity on date of acquisition. The consideration received on the disposal of treasury shares, net of incremental costs attributable to the disposal and tax, is also recognised directly in equity.

⁽¹⁾ Refer Remuneration Report online for further details of the schemes.

⁽²⁾ 317 920 shares became unrestricted during 2018 (2017: 987 598) in respect of the Restricted Share Plan.

⁽³⁾ Refer to the online Remuneration report on page 33 where the directors' interests in contracts and interests of directors and officers in share capital and changes in directors are disclosed (which have been audited).

Details regarding the restricted shares outstanding on 31 December 2018 and the financial years during which they become unconditional, are as follows:

	Number of Shares 000's
Unrestricted during year ending (subject to performance targets)	
31 December 2019	4 726
31 December 2020	5 297
31 December 2021	7 913
31 December 2022	3 470
31 December 2023	1 704
Total unrestricted shares	23 110

A total of 6.2 million (2017: 6.5 million) restricted shares were granted to staff and executive directors during 2018. The fair value of the grants on grant date, calculated in terms of IFRS 2, amounted to R427 million (2017: R374 million) and is expensed in the statement of comprehensive income over the vesting period of up to five years. The fair value is based on the Sanlam share price on grant date, adjusted for dividends not accruing to participants during the vesting period.

12. Other reserves

Non-distributable reserve

The reserve comprises the pre-acquisition reserve arising upon the demutualisation of Sanlam Life Insurance Limited and the regulatory non-distributable reserves of the Group's Botswana as well as Kenya, Malaysia and Saham operations.

Foreign currency translation reserve

The exchange differences arising on the translation of foreign operations to the presentation currency are transferred to the foreign currency translation reserve. On disposal of the net investment, the cumulative exchange differences relating to the operations disposed of are released to the statement of comprehensive income.

Cash flow hedge reserve

Certain financial instruments are designated as hedging instruments of the exposures arising on certain highly probable forecast transactions (cash flow hedge). On designation of a hedged transaction, the Group documents the relationship between the hedging instruments and the hedged item, as well as its risk management objective and strategy for undertaking the hedge transaction. The Group also documents its assessment, both at hedge inception and on an ongoing basis, of whether the hedging instruments that are used in the hedging transaction have been and will continue to be highly effective in offsetting changes in cash flows of the hedged item. The effective portion of the gain or loss on the hedging instrument is recognised in other comprehensive income and accumulated in reserves in equity, while any ineffective portion is recognised immediately in profit or loss within investment surpluses (if applicable).

When the highly probable forecast transaction that is hedged results in the recognition of a non-financial asset or liability, the gains and losses previously deferred in equity are reclassified from equity and included in the initial measurement of the asset or liability. The deferred amounts are ultimately recognised in profit or loss when the related asset is impaired or sold.

If the highly probable forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is reclassified to profit or loss.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

12. Other reserves (continued)

Consolidation reserve

A consolidation reserve is created for differences in the valuation basis of long-term policy liabilities and assets supporting those liabilities. Certain assets held in policyholder portfolios may be required to be measured on a basis inconsistent with that of the corresponding liabilities by IFRS. Similarly, deferred tax assets recognised in respect of assessed tax losses in policyholder funds increases the Group's net assets without a corresponding increase in policy liabilities. These create mismatches with a corresponding impact on the shareholders' fund. A separate reserve is created for these valuation differences owing to the fact that they represent accounting differences and not economic gains or losses for the shareholders' fund.

Valuation differences arise from the following investments which are accounted for as noted below for IFRS purposes, while for purposes of valuing the related policy liabilities these investments are valued at fair value:

- Investments in subsidiaries which are valued at net asset value plus goodwill;
- Investments in associated companies and joint ventures, which are recognised on an equity-accounted basis; and
- Investments in Sanlam Limited shares, which are regarded as treasury shares and deducted from equity on consolidation and consequently valued at zero.

In respect of the deferred tax, the reserve represents net assessed losses to the extent that assets are considered recognisable, and will be realised as the assessed tax losses are utilised.

R million	2018	2017
Non-distributable reserves	10 154	9 976
Pre-acquisition reserves upon demutualisation of Sanlam Life Insurance Limited	9 415	9 415
Regulatory reserves	739	561
Foreign currency translation reserve	1 210	(492)
Consolidation reserve	(869)	(400)
Policyholder fund investments in consolidated subsidiaries	(90)	(12)
Tax benefit in respect of the individual policyholders' tax fund (IPF) tax losses	1 017	1 200
Policyholder fund investment in Sanlam Limited shares	(1 796)	(1 588)
Total reserves other than retained earnings	10 495	9 084

The non-distributable reserve consists of the pre-acquisition reserve arising from the demutualisation of Sanlam Life Insurance Limited in 1998. The regulatory non-distributable reserves comprises mainly of the Group's Botswana as well as Kenya, Malaysia and Saham operations.

Total non-controlling interest	12 111	6 017

For additional financial information for subsidiaries with significant non-controlling interest refer to pages 144 to 148.

14. Long-term policy liabilities

A contract is classified as insurance where Sanlam accepts significant insurance risk by agreeing with the policyholder to pay benefits if a specified uncertain future event (the insured event) adversely affects the policyholder or other beneficiary. Significant insurance risk exists where it is expected that for the duration of the policy or part thereof, policy benefits payable on the occurrence of the insured event will significantly exceed the amount payable on early termination, before allowance for expense deductions at early termination. Once a contract has been classified as an insurance contract, the classification remains unchanged for the remainder of its lifetime, even if the insurance risk reduces significantly during this period.

Policy contracts not classified as insurance contracts are classified as investment contracts and comprise the following categories:

- Investment contracts with DPF;
- Investment contracts with investment management services; and
- Other investment contracts.

An investment contract with DPF entitles the policyholder to receive benefits or bonuses in addition to guaranteed benefits. These additional benefits have the following features:

- The benefits constitute a significant portion of each policy's total benefits;
- The timing and amount of the benefits are at the discretion of the Sanlam Group, which has to be exercised in a reasonable way; and
- The benefits are based on the investment performance of a specified pool of underlying assets.

All investment contracts that fall within the scope of IFRS 9 (i.e. all investment contracts without DPF) are designated as at fair value through profit or loss.

Premium income from long-term insurance and investment policy contracts is recognised as an increase in long-term policy liabilities. The full annual premiums on individual insurance and investment policy contracts that are receivable in terms of the policy contracts are accounted for on policy anniversary dates, notwithstanding that premiums are payable in instalments. The monthly premiums in respect of certain new products are in terms of their policy contracts accounted for when due. Cover only commences when premiums are received. Group life insurance and investment contract premiums are accounted for when receivable. Where premiums are not determined in advance, they are accounted for upon receipt. The unearned portion of accrued premiums is included within long-term policy liabilities.

14.5 Long-term insurance and investment contract benefits

Underwriting benefits

Life insurance policy claims received up to the last day of each financial period and claims incurred but not reported (IBNR) are provided for and included in underwriting policy benefits. Past claims experience is used as the basis for determining the extent of the IBNR claims.

Provision is made for underwriting losses that may arise from unexpired general insurance risks when it is anticipated that unearned premiums will be insufficient to cover future claims.

Income from reinsurance policies is recognised concurrently with the recognition of the related policy benefit.

Other policy benefits

Other policy benefits are not recognised in the Group statement of comprehensive income but reflected as a reduction in long-term policy liabilities (refer note 14.4).

Maturity and annuity payments are recognised when due. Surrenders are recognised at the earlier of payment date or the date on which the policy ceases to be included in long-term policy liabilities.

The composition of policy liabilities have been aligned with the new solvency regime compositions. Prior year has been restated accordingly.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

14. Long-term policy liabilities (continued)

14.8 Policy liabilities include the following:

R million	2018	2017
Provision for HIV/Aids and other pandemics	3 264	3 259
Asset mismatch reserve	3 216	3 827

15. Term finance

Term financial liabilities include:

- Liabilities incurred as part of interest margin business and matched by specific financial assets measured at amortised cost; and
- Other term finance liabilities measured at stock exchange prices or amortised cost as applicable

Preference shares issued by the Group that are redeemable or subject to fixed dividend payment terms are classified as term finance liabilities. Dividends paid in respect of term finance are recognised in the statement of comprehensive income as finance cost.

R million	2018	2017
15.1 Term finance comprises:		
Interest-bearing liabilities held in respect of margin business	3 654	1 918
Other interest-bearing liabilities	3 759	4 508
	7 413	6 426
Interest-bearing liabilities held in respect of margin business		
Redeemable cumulative non-voting preference shares issued by subsidiary companies, with dividend terms that range between 6,4% and 6,9% (2017: 6,4% and 6,9%) or linked to prime interest rates. The preference shares have different redemption dates up to 2020.	3 654	1 918
Other interest-bearing liabilities		
Unsecured subordinated bond, with interest payable at 8,70% and a final maturity date of 15 August 2023. The bond has a redemption call option at its nominal value of R1 160 million, which the Group exercised on 15 August 2018.	-	1 163
Unsecured subordinated bond, with interest payable at 9,27% and a final maturity date of 15 August 2026. The bond has a redemption call option at its nominal value of R1 000 million, which the Group can exercise on 15 August 2021.	1 013	1 003
Unsecured subordinated callable notes to the value of R1 billion (issued during 2016) in two equal tranches of fixed and floating rate notes. The effective rate for the floating rate notes represents the three-month JIBAR plus 245 basis points, while the rate for the fixed rate notes amounted to 11.77%. The floating rate notes have an optional redemption date of 12 April 2021 with a final maturity date of 12 April 2026, and the fixed rate notes an optional redemption date of 12 April 2023 with a final maturity date of 12 April 2028. During June 2017, the Group issued additional unsecured subordinated callable floating rate notes to the value of R1 billion in anticipation of the redemption of the R1 billion subordinated debt issued in 2007. The effective interest rate for the floating rate notes represents the three-month JIBAR plus 210 basis points. The notes have an optional redemption date of 27 June 2022 with a final maturity date of 27 June 2027.	2 072	2 056
Mortgage bonds over properties held in unit-linked policyholder funds. The mortgage over each property is negotiated separately, varies in term from 5 to 20 years, with interest rates linked at a premium between 1.5% and 4% above the Bank of England base rate.	136	174

The valuation is based on a discounted cash flow and classified as a level 3 valuation. Refer to note 32 for additional fair value disclosures.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

16. Provisions

Provisions are recognised when the Group has a present legal or constructive obligation as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate of the amount of the obligation can be made. Provisions are measured at the present value of the amounts that are expected to be paid to settle the obligations. Provisions are charged to the income statement in the line item to which it relates.

Details of the different classes of provisions are as follows:

R million	Possible claims	Other	Total
Balance at 1 January 2017	174	158	332
Charged to the statement of comprehensive income	(1)	94	93
Additional provisions	-	97	97

Utilised during the year	(109)	(87)	(196)
Foreign currency translation differences	3	17	20
Balance at 31 December 2018	52	398	450
Analysis of provisions			
Current	9	309	318
Non-current	43	89	132
Total provisions at 31 December 2018	52	398	450

Possible claims

The Group provides for possible claims that may arise as a result of past events, transactions or investments. Due to the nature of the provision, the timing of the expected cash outflows is uncertain.

Estimates are reviewed annually and adjusted as appropriate for new circumstances.

Additional information in respect of these claims cannot be provided, due to the potential prejudice that such disclosure may confer on the Group.

Other

Includes sundry provisions for probable outflows of resources from the Group arising from past events. The timing of settlement cannot reasonably be determined.

17. Financial services income

Financial services income is considered to be revenue for IFRS purposes and includes both IFRS 15 revenue and revenue scoped out of IFRS 15. The different sources of revenue are listed below.

Major IFRS 15 revenue sources:

- Income from investment management activities, such as fund management fees, collective investment and linked-product administration fees, commissions, performance fees and other fees;
- Income from capital market activities, such as advisory fees and structuring fees on financing provided; and
- Income from other financial services, such as independent financial advice and trust services.

Major revenue sources not within the scope of IFRS 15:

- Income earned from long-term insurance activities, such as risk underwriting charges and asset mismatch profits or losses in respect of non-participating business;
- Income from general insurance business, such as general insurance premiums;
- Income from investments held for capital market activities, such as realised and unrealised gains or losses on trading accounts, unsecured corporate bonds and money market assets and liabilities.

Revenue within the scope of IFRS 15 is either recognised at a point in time or over time. Revenue is recognised over time if one of the following criteria is met:

- The customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs;
- The entity's performance creates or enhances an asset that the customer controls as the asset is created or enhanced; or
- The entity's performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date.

If none of the above criteria is met, revenue is recognised at a point in time.

Revenue disaggregation

Revenue from contracts with customers are disaggregated by geographic location and type of revenue. It is also split per the Group's key reporting segments. We believe it best depicts how the nature, amount, timing and uncertainty of the Group's revenue and cash flows are affected by economic factors.

Recognition of different sources of revenue:

Fees for investment management or administration services in respect of investment contracts are recognised as services are rendered. Initial fees that relate to the future rendering of services are deferred and recognised as those future services are rendered. Related performance fees are also recognised over time, however represent variable consideration and therefore recognition is constrained until there is a 'high degree of confidence' that revenue will not be reversed in a subsequent reporting period; this is typically on crystallisation of the fee.

Commissions from investment management or administration services in respect of investment contracts are recognised as services are rendered. For IFRS 15 purposes, these commissions are recognised either at a point in time or over time.

Actuarial and risk management fees relates to actuarial billing to clients.

Investment and insurance contract policyholders are charged for policy administration, risk underwriting and other services. The **long-term policy contract fee income** is recognised as revenue over time as the related services are rendered.

General insurance premiums are accounted for when receivable, net after a provision for unearned premiums relating to risk periods that extend to the following year. Inward general reinsurance agreement premiums are accounted for on an intimated basis.

Consulting fees are earned for advice and other services provided to clients of the Group's financial advisory businesses. For IFRS 15 purposes, these fees are accounted for either over time as the related services are rendered or at a point in time, depending on when the performance obligations are satisfied.

NOTES TO THE GROUP FINANCIAL STATEMENTS for the year ended 31 December 2018 (continued)

20. Expenses

Sales remuneration consists of commission payable to sales staff on long-term and short-term investment and insurance business and expenses directly related thereto, bonuses payable to sales staff and the Group's contribution to their retirement and medical aid funds. Commission is accounted for on all in-force policies in the financial period during which it is incurred.

The portion of sales remuneration that is directly attributable to the acquisition of long-term recurring premium investment policy contracts is capitalised to the deferred acquisition cost (DAC) asset and recognised over the period in which the related services are rendered and revenue recognised (refer to policy statement for DAC asset).

Acquisition cost for general insurance business is deferred over the period in which the related premiums are earned.

Sales remuneration recognised in the statement of comprehensive income includes the amortisation of deferred acquisition costs as well as sales remuneration incurred that is not directly attributable to the acquisition of long-term investment policy contracts or general insurance business.

Administration costs include, inter alia, indirect taxes such as VAT, property and administration expenses relating to owner-occupied property, property and investment expenses related to the management of the policyholders' investments, claims handling costs, product development and training costs. It also includes expected credit losses of financial assets at amortised cost.

Leases of assets, under which the lessor effectively retains all the risks and benefits of ownership, are classified as operating leases. Payments made under operating leases are charged to the statement of comprehensive income on a straight-line basis over the period of the lease. When an operating lease is terminated, any payment required by the lessor by way of penalty is recognised as an expense in the period in which termination takes place.

Leases, where the Group effectively assumes all the risks and benefits of ownership, are classified as finance leases. Finance leases are capitalised at inception at the lower of the present value of minimum lease payments and the fair value of the leased assets. The effective interest rate method is used to allocate lease payments between finance cost and the lease liability. The finance cost component is recognised as an expense in the statement of comprehensive income. Finance lease assets recognised are depreciated, where applicable, over the shorter of the assets' useful lives and the lease terms.

A number of **staff long-term incentive schemes** have been implemented in the Group and have vested conditions at the reporting date:

In terms of these plans, Sanlam undertakes to deliver a fixed number of shares to selected employees on predetermined dates in the future, on condition that the employee is still in the employment of Sanlam on those dates. Vesting can occur in three tranches over a period starting three years from the grant date and meet specified individual performance hurdles. Group and/or cluster hurdles are also applicable for some of the plans. Refer to the online Remuneration Report for information on these plans. The fair value of equity instruments granted is measured on grant date using an appropriate valuation model, which takes into account the market price on grant date, the fact that employees will not be entitled to dividends until the shares vest (as applicable), as well as an assumption on the actual percentage of shares that will be delivered. The fair value of the equity instruments granted on the date of grant is recognised in the statement of comprehensive income on a straight-line basis over the vesting period, adjusted to reflect actual levels of vesting.

Directors' remuneration

Refer to Remuneration Report online for additional audited information on directors' remuneration.

22. Earnings per share

For basic earnings per share the weighted average number of ordinary shares is adjusted for the treasury shares held by subsidiaries, consolidated investment funds and policyholders. Basic earnings per share is calculated by dividing earnings by the adjusted weighted average number of shares in issue.

For diluted earnings per share the weighted average number of ordinary shares is adjusted for the shares not yet issued under the Sanlam Share Incentive Scheme and treasury shares held by subsidiaries, consolidated investment funds and policyholders. Diluted earnings per share is calculated by dividing earnings by the adjusted diluted weighted average number of shares in issue.

Collateral of between 100% (2017: 100%) and 120% (2017: 120%) of the value of securities on loan is held at 31 December 2018.

Fair value of the collateral held that the Group is permitted to sell or repledge internally in the absence of default

756 3 448

24. Critical accounting estimates and judgements

Estimates and assumptions are an integral part of financial reporting and as such have an impact on the amounts reported for the Group's assets and liabilities. Management applies judgement in determining best estimates of future experience. These judgements are based on historical experience and reasonable expectations of future events and changes in experience. Estimates and assumptions are regularly updated to reflect actual experience. It is reasonably possible that actual outcomes in future financial years may differ to the current assumptions and judgements, possibly significantly, which could require a material adjustment to the carrying amounts of the affected assets and liabilities.

The critical estimates and judgements made in applying the Group's accounting policies are summarised below. Given the correlation between assumptions, it is not possible to demonstrate the effect of changes in key assumptions while other assumptions remain unchanged. Further, in some instances the sensitivities are non-linear. Interdependencies between certain assumptions cannot be quantified and are accordingly not included in the sensitivity analyses; the primary example being the relationship between economic conditions and lapse, surrender and paid-up risk.

An important indicator of the accuracy of assumptions used by a life insurance company is the experience variances reflected in the embedded value earnings during a period. The experience variances reported by the Group to date have been reasonable compared to the embedded value of covered business, confirming the accuracy of assumptions used by the Group. Refer to the embedded value of covered business on page 194 of the online Integrated report for additional information.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

24. Critical accounting estimates and judgements (continued)

24.1 Impairment of goodwill and value of business acquired

The recoverable amount of goodwill, value of business acquired and other intangible assets for impairment testing purposes has been determined based on the embedded value of life insurance businesses and the fair value of other businesses, as applicable, less the consolidated net asset value of the respective businesses. The embedded value (plus a value of new life insurance business multiple for goodwill) or fair value of a business therefore has a significant impact on whether an impairment of goodwill and/or value of business acquired is required. Refer to pages 209 to 211 of the online Integrated report respectively for the main assumptions applied in determining the embedded value of covered business and the fair value of other Group businesses. Embedded value of covered business and fair value sensitivity analysis are provided on pages 207 to 208 and 213 of the online Integrated report respectively.

24.2 Policy liabilities in respect of long-term insurance contracts and investment contracts other than those with investment management services

This disclosure should be read in conjunction with the valuation methodology as described on pages 61 to 63.

The following process is followed to determine the valuation assumptions:

- Determine the best estimate for a particular assumption.
- Prescribed margins are then applied as required by actuarial guidance notes.
- Discretionary margins may be applied as required by the valuation methodology or if the statutory actuary considers such margins necessary to cover the risks inherent in the contracts.

The best estimate of future experience is determined as follows:

Investment return

Future investment return assumptions are derived from market-related interest rates on fixed-interest securities with adjustments for the other asset classes. The appropriate asset composition of the various asset portfolios, investment management expenses, taxation at current tax rates and charges for investment guarantees are taken into account. Investment return information for the most important solutions are as follows:

Participating annuity business	9,1	8,7	n/a	n/a
Non-participating annuity business ⁽¹⁾	9,9	9,7	2,4	1,9
Guarantee plans ⁽¹⁾	n/a	n/a	n/a	n/a

⁽¹⁾ The calculation of policy liabilities is based on discount rates derived from the zero-coupon yield curve. This is the average rate that produces the same policy liabilities as calculated using the yield curve applied in the valuation

Future bonus rates for participating business

Assumed future bonus rates are determined to be consistent with the valuation implicit rate assumptions.

Decrements

Assumptions with regard to future mortality, disability and disability payment termination are consistent with the experience for the 4,5 years up to 30 June 2018. Mortality and disability rates are adjusted to allow for expected deterioration in mortality rates as a result of Aids and for expected improvements in mortality rates in the case of annuity business. Assumptions with regard to future surrender, lapse and paid-up rates are based on the experience for the 4,75 years ending 30 September 2018.

Expenses

Unit expenses are based on 31 October 2018 actual figures plus estimates for the last two months of the year (adjusted for significant differences from actual) and escalated at estimated expense inflation rates per annum.

Refer to note 2 on page 207 of the online Integrated report for a sensitivity analysis of the value of in-force covered business to the main valuation assumptions.

24.3 Policy liabilities for investment contracts with investment management services

The valuation of these contracts is linked to the fair value of the supporting assets and deviations from future investment return assumptions will therefore not have a material impact. The recoverability of the DAC asset is not significantly impacted by changes in lapse experience; if future lapse experience was to differ by 10% (2017: 10%) from management's estimates, no impairment of the DAC asset would be required.

24.4 The ultimate liability arising from claims under general insurance contracts

The estimation of the ultimate liability arising from claims under general insurance contracts is an important accounting estimate. There are several sources of uncertainty that need to be considered in the estimation of the liability that the Group will ultimately incur.

The risk environment can change suddenly and unexpectedly owing to a wide range of events or influences. The Group is constantly refining its general insurance risk monitoring and management tools to enable the Group to assess risks appropriately, despite the greatly increased pace of change. The growing complexity and dynamism of the environment in which the Group operates means that there are, however, natural limits. There will never be absolute certainty in respect of identifying risks at an early stage, measuring them sufficiently or correctly estimating their real hazard potential.

Refer to the Capital and Risk Management Report on page 11 for further information on the estimation of the claims liability.

NOTES TO THE GROUP FINANCIAL STATEMENTS for the year ended 31 December 2018 (continued)

24. Critical accounting estimates and judgements (continued)

24.5 Valuation of unlisted investments

The valuation of unlisted investments is based on generally accepted and applied investment techniques, but is subject to judgement in respect of the adjustments made by the Group to allow for perceived risks. The appropriateness of the valuations is continuously tested through the Group's approval framework, in terms of which the valuation of unlisted investments is reviewed and recommended for approval by the Audit, Actuarial and Finance Committee and Board by the Sanlam Non-listed Asset Controlling Body at each reporting period. Refer to note 32 for additional information.

24.6 Consolidation of investment funds

The Group invest in a number of investment funds and has varying holdings. In terms of IFRS 10, the Group considers itself to have control of a fund when it both owns the asset manager of the fund and holds greater than 20% thereof.

24.7 Deferred tax assets

During 2016, changes to South African insurance tax legislation gave rise to a change in the probability and timing of utilisations of historic losses in certain tax funds. As a result, management determined that it is now probable that these losses will be utilised and therefore that a deferred tax asset should be raised. In determining the extent to which these losses should be recognised, management forecast future profits, including the impact of new business, where applicable, as well as other business decisions that may affect future profits. Changes in these assumptions, as well as decisions made by the Group in future may affect the extent to which these losses are utilised.

24.8 Business model assessment

Classification and measurement of financial assets depends on the results of the Solely Payments of Principal and Interest and the business model test (refer to Investment note 7). The Group determines the business model at a level that reflects how groups of financial assets are managed together to achieve a particular business objective. This assessment includes judgement reflecting all relevant evidence including how the performance of the assets is evaluated and their performance measured, the risks that affect the performance of the assets and how these are managed. Monitoring is part of the Group's continuous assessment of whether the business model for which the remaining financial assets are held continues to be appropriate and if it is not appropriate whether there has been a change in business model and so a prospective change to the classification of those assets.

24.9 Financial assets: Impairment

The measurement of impairment losses under IFRS 9 across relevant financial assets requires judgement, in particular for the estimation of the amount and timing of future cash flows when determining impairment losses and the assessment of a significant increase in credit risk. These estimates are driven by the outcome of modelled ECL scenarios and the relevant inputs used. Refer to Investments note 7.3.2 and Trade receivable note 10.1.

24.10 Cash flow hedging instruments

A cash flow hedge is a hedge of the exposure to variability in cash flows that is attributable to a particular risk, in this case the foreign currency and equity risk associated with a forecast transaction, and could affect profit or loss. For a forecast transaction, the key criterion for hedge accounting purposes is that the forecast transaction must be "highly probable". Management has assessed the facts and circumstances relating to the proposed acquisition of the remaining interest of 53,4% in Saham Finances (as announced on 8 March 2018), and concluded that the likelihood of the transaction not being concluded was remote. The expected effectiveness of the hedging relationship was also assessed and it was expected that the hedge would be effective throughout the hedging period. It was therefore concluded that hedge accounting can be applied.

The hedge was closed out on the effective date, and remained effective throughout the hedging period.

25. Retirement benefits for employees

Retirement benefits for employees are provided by a number of defined-benefit and defined-contribution pension and provident funds. The assets of these funds, including those relating to any actuarial surpluses, are held separately from those of the Group. The retirement plans are funded by payments from employees and the relevant Group companies, taking into account the recommendations of the retirement fund valuator.

Defined-benefit plans

The cost of providing benefits under the defined benefit plan is determined using the projected unit credit method. Re-measurements, comprising of actuarial gains and losses, the effect of the asset ceiling (excluding net interest) and the return on plan assets (excluding net interest), are recognised immediately in other comprehensive income in the period in which they occur. Re-measurements are not reclassified to profit or loss in subsequent periods. Net interest is calculated by applying the discount rate to the net defined benefit liability or asset. The Group recognises service costs comprising current service costs, past-service costs, gains and losses on curtailments and non-routine settlements and net interest expense or income in net profit. When a fund is in a net surplus position, the value of any defined benefit asset recognised is restricted to the sum of any unrecognised past service costs and the present value of any economic benefits available in the form of refunds from the plan or reductions in the future contributions to the plan.

Defined-contribution plans

Group contributions to the defined contribution funds are charged against the statement of comprehensive income in the year incurred.

The Sanlam Group provides for the retirement and medical benefits of full-time employees and for certain part-time employees by means of defined benefit and defined contribution pension and provident funds.

At 31 December 2018, 100% of employees were covered by defined contribution funds and none by defined benefit funds (2017: 100%).

25.1 Defined-contribution funds

There are separate defined contribution funds for advisers, full-time and part-time office staff. The Sanlam Group contributed R662 million to these funds during 2018 (2017: R593 million).

25.2 Defined-benefit pension funds

The Sanlam Group has three defined-benefit pension funds. These funds relate to:

- Sanlam Office Personnel;
- Sanlam Investments and Pensions Office Personnel; and
- Sanlam Developing Markets defined benefit fund SA.

The Sanlam Office Personnel fund does not have any active members at the end of 2018, it only has pensioners.

The value of the fund is R776 million, of which R766 million (2017: R762 million) relates to the insurance policy with Sanlam Life Insurance Limited. The trustees also decided to replace the current insurance policy between the fund and Sanlam Life Insurance Limited with individual policies between the pensioners and Sanlam Life Insurance Limited, to be effected after year end. Approval for this transfer was granted by the regulator in February 2019.

The remaining assets of R10 million in the fund will be used to augment the pensions payable in terms of the individual policies. Through this process the fund obligations towards the pensioners will be transferred to Sanlam Life Insurance Limited in terms of the relevant Pension Fund regulations. The fund will thereafter have no further obligations.

Boards of Trustees oversee the affairs of the other defined benefit funds as required by the relevant legislation. The responsibilities of the Trustees are defined in these regulations. Adequate allowance for future salary increases for active members and allowance for pension increases in line with the funds' pension increase policies are required to ensure that the funds are always financially sound.

Both the Sanlam Investments and Pensions as well as Sanlam Developing Markets SA funds were in materially sound positions at 31 December 2018.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

25. Retirement benefits for employees (continued)

25.2 Defined-benefit pension funds (continued)

Actual experience:			
Actual return on assets	% pa	-0,8%	14,1%

Based on reasonable actuarial assumptions about future experience, the employers' contribution, as a fairly constant percentage of the remuneration of the members of the funds, should be sufficient to meet the promised benefits of the funds. The expected return on defined benefit fund assets is calculated based on the long-term asset mix of these funds. The fund assets are analysed into different classes such as equities, bonds and cash, and a separate expected return is calculated for each class. Current market information and research of future trends are used as the basis for calculating these expected returns.

> 5 years	(459)	(608)
Total Expected payments	(1 740)	(1 784)

The table above includes information for all three funds. As explained before, there is a process whereby the Sanlam Office Personnel Fund will replace the current insurance policy between the fund and Sanlam Life Insurance Limited with individual policies between the pensioner and Sanlam Life Insurance Limited. This will be effected after year end and as a result this retirement benefit fund will come to an end.

25.3 Medical aid funds

The actuarially determined present value of medical aid obligations for disabled members and certain pensioners is fully provided for at year-end and is considered to be immaterial. The Group has no further unprovided post-retirement medical aid obligations for current or retired employees.

26. Borrowing powers

In terms of the memorandum of incorporation of Sanlam Limited, the directors may at their discretion raise or borrow money for the purpose of the business of the company without limitation.

Material borrowings of the Sanlam Group are disclosed in note 15.

27. Commitments and contingencies

Possible obligations of the Group, the existence of which will only be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the Group and present obligations of the Group where it is not probable that an outflow of economic benefits will be required to settle the obligation or where the amount of the obligation cannot be measured reliably, are not recognised in the Group statement of financial position but are disclosed in the notes to the financial statements.

Possible assets of the Group, the existence of which will only be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the Group, are not recognised in the Group statement of financial position and are only disclosed in the notes to the financial statements where an inflow of economic benefits is probable.

27.1 Operating leases

R million	2018	2017
Future operating lease commitments:		
Lease rentals due within one year	740	519
Lease rentals due within two to five years	1 493	1 315
Lease rentals due within more than five years	532	683
Total operating lease commitments	2 765	2 517

27.2 Guarantees provided in favour of Sanlam Capital Markets (SCM) and others

Sanlam has guaranteed obligations that may arise under SCM's unlisted commercial paper programme, as well as SCM's obligations arising from transactions with approved, specified counterparties through direct guarantees. The total limit for the unlisted commercial paper programme is R30 billion, but both these and the direct guarantees are subject to an overall R7 billion guarantee utilisation limit in terms of the Group governance processes. At 31 December 2018 the utilisation of guarantees by SCM amounted to R4 billion (2017: R6 billion).

Sanlam has provided a performance guarantee facility to third parties in respect of the business operations of Letshego Holdings, which is subject to an overall limit of R500 million in terms of the Group's governance processes. An amount of R138 million was utilised at 31 December 2018 (2017: Rnil).

Security to third parties in respect of the preference share business subject to and within the overall approved limit of R3,5 billion (2017: R3,5 billion).

Sanlam has also issued letters of support, in the ordinary course of business, for the activities of certain subsidiaries in the Group.

Sanlam has approved a guarantee facility, in March 2018 in respect of the distribution agreement between SPF and Capitec Bank, which has been launched during 2018. The facility is subject to an internal limit of R500 million. The first premiums were received in term of the credit life underwriting and funeral product distribution agreements with Capitec. Performance guarantees with the sum of R300 million have been issued in respect of the sales up to 31 December 2018.

27.3 Other

Financial claims are lodged against the Group from time to time. Provisions are recognised for claims based on best estimates of the expected outcome of the claims (refer to note 16). Given the high degree of uncertainty involved in determining the expected outcome, it is reasonably possible that outcomes in future financial years will be different to the current estimates.

There are no material commitments or contingencies that have not been provided for or fully disclosed, unless additional disclosures may potentially prejudice the legal arguments of the Group.

28. Related parties

28.1 Major shareholders

Sanlam Limited is the ultimate holding company in the Group.

By virtue of its relationship with Sanlam Limited, Ubuntu-Botho Investments is considered to be a related party to the Group. Apart from Ubuntu-Botho Investments' (UB) role as the Group's broad-based black economic empowerment partner and jointly pursuing investments in complimentary financial services businesses, the Group did not enter into transactions with Ubuntu-Botho Investments in the normal course of business.

During 2017, the Group provided preference share funding of R500 million (carrying value at 31 December 2018: R540 million) to a Special Purpose Vehicle (SPV) co-owned by UB and the Sanlam Ubuntu-Botho Community Development Trust on arms' length terms. The preference shares are redeemable after 10 years, carry a dividend rate of 72.5% of the prime lending rate and are secured by Sanlam shares at a 1,5 times cover ratio. The preference shares will participate in 10% of the net asset value of the SPV at the time of redemption.

Sanlam shareholders approved a BBBEE equity raising at the extraordinary general meeting held on 12 December 2018. Refer to the online Integrated Report, page 61.

No other Sanlam shareholders have a significant influence and thus no other shareholder is a related party. The shares are widely held by public and non-public shareholders.

Details of transactions between the policyholders' and shareholders' funds of the Sanlam Group are disclosed in note 14.

The shareholder spread is presented on page 240 of the online Integrated Report.

28.2 Transactions with post-employment benefit plans

Contributions to the post-employment benefit plans were R739 million in 2018 (2017: R613 million). There are no amounts outstanding at year-end.

The trustees of the Sanlam Office Personnel Fund insured the pension fund obligations through a policy with Sanlam Life Insurance Limited during 2017 (refer to note 25).

28.3 Transactions with directors

Remuneration is paid to directors in the form of fees to non-executive directors and remuneration to executive directors of the Company. All directors of Sanlam Limited have notified that they did not have a material interest in any contract of significance with the Company or any of its subsidiaries, which could have given rise to a conflict of interest during the year. Details relating to directors' emoluments are included in note 20 and their shareholdings and share participation in the Company are disclosed as part of the Remuneration report online.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

28. Related parties (continued)

28.4 Transactions with entities in the Group

During the year the Company and its subsidiaries, in the ordinary course of business, entered into various transactions with other Group companies, associated companies, joint ventures and other stakeholders.

Included in note 7.3.2 under Corporate interest-bearing investment is R1 372 million which relates to the corporate interest-bearing investments in Bank Windhoek Limited and Letshego Holdings Limited.

The Group provides financing for the loans granted to Sanlam Personal Loans. The carrying value of these loans amounts to R3 343 million. Most of these loans earn interest of the asset swap rate plus a premium of between 1,48% and 2,75%, and will mature in tranches over a period of 3 years up to 30 November 2021.

28.5 Policy administration

Certain companies in the Group carry out third party policy and other administration activities for other related parties in the Group. These transactions are entered into in the normal course of business.

R million	2018	2017
28.6 Key management personnel compensation		
Compensation paid to the Group's key management personnel is as follows:

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

30. Business combinations

Material acquisitions of the Group consolidated in the 2018 financial year

Saham Finances Group

Effective 1 October 2018, the Sanlam Group acquired the remaining interest (53,37%) in Saham Finances, gaining control for the first time. The acquisition supports the group's vision to be a leading Pan-African financial services group. Sanlam Emerging Markets and Santam Limited hold an effective interest of 90% and 10% respectively. The Saham Finances Group provides financial services (predominately general insurance) across various countries in Africa.

The goodwill arising on the acquisition is attributable to synergies and future growth opportunities expected.

Details of the assets acquired and liabilities assumed, at fair value, are as follows:

Cash flow hedge				(1 500)

Refer to the Shareholder's Fund Information for the analysis of Saham Finances results. The post acquisition profits for the 3 month period amounted to R154 million.

31. Disposal groups classified as held for sale

Assets of disposal groups classified as held for sale comprise non-current assets for which the carrying value will be recovered principally through a sale transaction rather than through continuing use. These assets are measured at the lower of their carrying value and their fair value less costs to sell, unless they are specifically excluded from the measurement provisions of IFRS 5: Non-current Assets Held For Sale and Discontinued Operations, in which case they are measured in accordance with the applicable IFRS. Immediately before initial classification as held for sale, the assets to be reclassified are measured in accordance with applicable IFRS. When the sale of such non-current assets held for sale is expected to occur beyond one year, costs to sell are measured at their present value. Any increase in the present value of the costs to sell arising from the passage of time is presented in profit and loss as a financing cost.

Investment Properties

During 2018, management approved the sale of 3 properties of Sanlam General Insurance Kenya. As at 31 December 2018 contracts of sale were not entered into yet, but is expected to occur during 2019.

During 2017, management approved the sale of the MCIS Headquarters building for R321 million. The sale occurred during the current year.

	139	321

32. Fair value disclosures

Financial instruments

Financial instruments carried in the statement of financial position include investments (excluding investment properties, associates and joint ventures), receivables, cash, deposits and similar securities, investment policy contracts, term finance liabilities, liabilities in respect of external investors in consolidated funds and payables.

Recognition and derecognition

Financial instruments are recognised when the Group becomes party to a contractual arrangement that constitutes a financial asset or financial liability for the Group that is not subject to suspensive conditions. Regular way investment transactions are recognised by using trade date accounting.

Financial assets are derecognised when the contractual rights to receive the cash flows expire or when the asset is transferred. On derecognition of a financial asset, the difference between the carrying amount at the date of derecognition and the consideration received is recognised in profit or loss.

Financial liabilities are derecognised when the obligation to deliver cash or other resources in terms of the contract is discharged, cancelled or expires. On derecognition of a financial liability, the difference between the carrying amount extinguished and the consideration paid is recognised in profit or loss.

Collateral placed at counter-parties as part of the Group's capital market activities are not derecognised. No transfer of ownership takes place in respect of collateral other than cash and any such collateral accepted by counter-parties may not be used for any purpose other than being held as security for the trades to which such security relates. In respect of cash security, ownership transfers in law. However, the counterparty has an obligation to refund the same amount of cash, together with interest, if no default has occurred in respect of the trades to which such cash security relates. Cash collateral is accordingly also not derecognised.

NOTES TO THE GROUP FINANCIAL STATEMENTS for the year ended 31 December 2018 (continued)

32. Fair value disclosures (continued)

Classification

Financial assets

On initial recognition, a financial asset is classified as measured at:

- Amortised cost,
- Fair value through profit or loss (either mandatory or designated), or
- Fair value through other comprehensive income.

A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at fair value through profit or loss:

- It is held within a business model whose objective is to hold assets to collect contractual cash flows; and
- Its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

A debt instrument is measured at fair value through other comprehensive income only if it meets both of the following conditions:

- The asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and
- Its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

All financial assets not classified as measured at amortised cost or fair value through other comprehensive income as described above are mandatorily measured at fair value through profit or loss. In addition, the group designates certain financial assets that would otherwise meet the requirements to be measured at amortised cost or at fair value through other comprehensive income as at fair value through profit or loss if doing so eliminates or significantly reduces an accounting mismatch that would otherwise arise.

Financial liabilities

On initial recognition, the Group classifies its financial liabilities into one of the following categories:

- Amortised cost, or
- Fair value through profit or loss (either mandatory or designated)

The classification of financial instruments is determined at initial recognition based on the purpose for which the financial assets are acquired or liabilities assumed. Financial liabilities classified as at fair value through profit or loss comprise held-for-trading liabilities, including derivatives (mandatory fair value through profit or loss) as well as financial liabilities designated as at fair value through profit or loss.

On initial recognition the Group designates a financial liability as at fair value through profit or loss when doing so results in more relevant information either because:

- It eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different basis; or
- A group of financial liabilities; or a group of financial assets and liabilities is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy and information about the group is provided internally on that basis to the entity's key management personnel.

The Group designates financial instruments as at fair value through profit or loss in line with its risk management policies and procedures that are based on the management of the Group's capital and activities on a fair value basis. The Group's internal management reporting basis is consistent with the classification of its financial instruments.

Initial measurement

A financial asset or financial liability is initially measured at fair value, plus for a financial asset or financial liability not measured at fair value through profit or loss, transaction costs that are directly attributable to its acquisition or issue.

Costs directly attributable to the acquisition of financial assets classified as at fair value through profit or loss are recognised in the statement of comprehensive income as part of investment surpluses.

Subsequent measurement

Financial instruments classified as at fair value through profit or loss are measured at fair value after initial recognition. Net gains and losses (ie on the sale of investments and fair value gains and losses), interest or dividend income and foreign exchange gains or losses are recognised in profit or loss. Changes in fair value are recognised in the statement of comprehensive income as investment surpluses. The particular valuation methods adopted are disclosed in the individual policy statements associated with each item.

Financial instruments classified as at amortised cost are measured at amortised cost using the effective interest method. Interest income, interest expense, foreign exchange gains and losses and impairment are recognised in profit or loss. Any gain or loss on derecognition is also recognised in profit or loss.

Impairment

The Group recognises loss allowances for expected credit losses on:

- Financial assets measured at amortised cost (including contract assets/contract receivables); and
- Financial guarantee contracts

At each reporting date, the loss allowances are measured at an amount equal to lifetime expected credit losses if the credit risk on the financial instrument has increased significantly since initial recognition.

At each reporting date the loss allowances are measured at an amount equal to the 12-month expected credit losses if:

- The credit risk on a financial instrument has not increased significantly since initial recognition; or
- Financial instruments are determined to have a low credit risk at the reporting date.

The Group determines whether the credit risk on a financial instrument has increased significantly by comparing this risk of default occurring on the financial instrument as at the reporting date with the risk of default occurring on the financial instrument as at the date of initial recognition together with reasonable and supportable information that is indicative of significant increases in credit risk since initial recognition.

At each reporting date the loss allowances are measured at an amount equal to the 12-month expected credit losses if the credit risk on a financial instrument has not increased significantly since initial recognition. Financial instruments that are determined to have a low credit risk at the reporting date are assumed to have no significant increase in credit risk.

At each reporting date, the loss allowances are measured at an amount equal to lifetime expected credit losses if the credit risk on the financial instrument has increased significantly since initial recognition.

12-month expected credit losses are the portion of expected credit losses that result from default events that are possible within the 12 months after the reporting date. Lifetime expected credit losses are the expected credit losses that result from all possible default events over the expected life of a financial instrument.

An impairment gain or loss is recognised in profit or loss for the amount of expected credit losses (or reversals) that is required to adjust the loss allowance at the reporting date.

Measurement of expected credit losses

Expected credit losses are a probability-weighted estimate of credit losses and are measured as the present value of all cash short falls (ie the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Group expects to receive).

Presentation of loss allowances in the statement of financial position

Loss allowances for expected credit losses are presented as a deduction from the gross carrying amounts of the financial assets.

Write-offs

The gross carrying amount of a financial asset is written off and reduced when there is no reasonable expectation of recovering a financial asset in its entirety or a portion thereof.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

32. Fair value disclosures (continued)

Offsetting

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is currently a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or to realise the assets and settle the liabilities simultaneously.

Other financial liabilities

Other financial liabilities include:

- Term finance liabilities incurred as part of interest margin business and matched by specific financial assets measured at amortised cost;
- Other term finance liabilities measured at stock exchange prices or amortised cost as applicable;
- Investment contract liabilities measured at fair value, determined on the basis as disclosed in the section on Policy Liabilities and Profit Entitlement; and
- External investors in consolidated funds measured at the attributable net asset value of the respective funds.

Determination of fair value and fair value hierarchy

Below follows required disclosure of fair value measurements, using a three-level fair value hierarchy that reflects the significance of the inputs used in determining the measurements. It should be noted that these disclosures only cover assets and liabilities measured at fair value.

Included in **level 1** category are assets and liabilities that are measured by reference to unadjusted, quoted prices in an active market for identical assets and liabilities.

Included in **level 2** category are assets and liabilities measured using inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices). For example, instruments measured using a valuation technique based on assumptions that are supported by prices from observable current market transactions are categorised as level 2.

Assets and liabilities measured using inputs that are not based on observable market data are categorised as **level 3**.

⁽¹⁾ The figures for other financial instruments column are made up of ISDA netting, CSA collateral, repos and scrip received. These amounts have been limited to the net amount recognised on the statement of financial position.

⁽²⁾ Amount used is the lower of collateral received or the value of the financial assets (normally the latter due to over-collateralisation)

ISDA netting refers to the netting of derivative exposures to arrive at the net amount owed to and by each counterparty as envisaged in the ISDA agreements with these counterparties.

Credit Support Agreements (CSA) have been signed with derivative counterparties to place collateral to offset the net exposures in footnote 1.

Scrip lending agreements are governed by GMSLA agreements in terms of which the collateral provided and the scrip received can be netted.

Security/collateral received refers to equity collateral that has been pledged to SCM to cover events of default.

⁽³⁾ Excludes enforceable netting arrangements.

⁽⁴⁾ Structured transactions liabilities include derivative liabilities.

⁽⁵⁾ Cash collateral received of R2 583 million was incorrectly disclosed in the 2017 Annual Financial Statements and has been updated to Rnil in the comparative note for the current financial year. This has no impact on the Statements of Financial Position and Comprehensive Income for the current or prior year.

IFRS 9 – Financial Instruments

The principles with regards to the classification and measurement of financial assets and liabilities, measuring impairment allowances for financial assets, and hedge accounting have been amended due to the implementation of the new accounting standard, IFRS 9 – Financial Instruments, applicable to all accounting periods beginning on or after 1 January 2018. Sanlam has implemented the standard, other than the hedging provisions which have not yet been adopted, on a modified retrospective basis and therefore comparatives are not restated and the impact of the adoption is recognised in equity on 1 January 2018.

The key changes introduced by IFRS 9 are as follows:

1. Classification and measurement – financial assets are required to be measured and classified based on the cash flow characteristics of the instrument and the business model under which the asset is managed. The classification and measurement of financial liabilities is largely unchanged, with the exception of the amendment requiring that the own credit risk component of fair value movements on liabilities designated at fair value through profit or loss now be presented in other comprehensive income.
2. Impairment – IFRS 9 introduces an expected credit loss model. This entails the recognition of an allowance for expected credit loss looking one year into the future or over the lifetime of the financial asset if the credit risk relating to the financial asset has increased significantly. The impairment model is therefore ‘forward looking’, replacing the incurred loss model as previously required by IAS 39.

The adoption of IFRS 9 has resulted in a reduction in total equity of R441 million on 1 January 2018. The impact is primarily a result of the recognition of expected credit losses in associated entities as well as isolated incidents of changes in the classification and measurement of certain financial instruments.

The majority of financial assets were measured at fair value through profit and loss under IAS 39, and continue to be under IFRS 9, either because they are mandatorily measured as such, or through designation.

The changes in classification and measurement are as follows:

- Certain financial assets, predominantly interest bearing investments, previously measured at amortised cost under IAS 39, have been reclassified to fair value through profit or loss under IFRS 9. The remeasurement impact on opening retained earnings is an increase of R6 million.
- The change in fair value that is attributable to changes in the credit risk of financial liabilities designated at fair value through profit or loss is presented in other comprehensive income under IFRS 9. In the current period, this portion of the movement in such instruments was immaterial.

Impairment of financial assets

Based on the impairment methodology described above, the Group has determined that the application of IFRS 9’s impairment requirements at 1 January 2018 results in additional impairment allowances in a number of equity-accounted associates.

The total impact on the balance of associates and opening retained earnings at 1 January 2018 is negative R428 million. The impact of applying the expected credit losses model in subsidiary entities resulted in a decrease in net asset value of R19 million.

IFRS 15 – Revenue from Contracts with Customers

This standard relates to the measurement, classification and disclosure of revenue from contracts with customers of the Sanlam Group.

The key factors in the application of IFRS 15 are as follows:

- A five-step model is applied to determine when to recognise revenue from contracts with customers, and at what amount.
- Revenue is recognised when (or as) Sanlam satisfies a performance obligation and transfers control of goods or services to a customer at the amount to which the company expects to be entitled and that is allocated to that specific performance obligation.
- Depending on whether certain criteria are met, revenue is recognised either over time or at a point in time, as or when control of the goods or services is transferred to the customer.
- More extensive and detailed disclosure are required in terms of IFRS 15.

The Group has assessed the impact of the adoption of IFRS 15 on opening retained earnings and concluded that there is no quantitative impact for Sanlam.

NOTES TO THE GROUP FINANCIAL STATEMENTS
for the year ended 31 December 2018 (continued)

35.2 Restatement of Group cash flow statement

Management reassessed the presentation of the Group's cash flow statement in respect of cash flows relating to the acquisition and disposal of investments that are backing its core operations. These were previously classified as investing cash flows and created a disconnect between operating and investing cash flows, as these investments are funded by cash flows associated with the origination of insurance and investment contracts, which are treated as operating cash flows. Management concluded that presenting acquisitions and disposals of investments as part of operating cash flows more accurately reflects to the users of the financial statements, the link between the ability to generate cash from investment and insurance contracts and the utilisation of those cash flows on various investments.

R million	2017		
	As previously reported	Adjustments	Restated
Cash flows from operating activities	23 402	(17 046)	6 356
Cash flows from investing activities	(20 267)	17 046	(3 221)
Net acquisition of investments	(17 046)	17 046	-
Acquisition of subsidiaries and associates	(4 917)	-	(4 917)
Disposal of subsidiaries and associated companies	1 696	-	1 696

The above restatements did not have any impact on the Group's statement of financial position, statement of comprehensive income and statement of changes in equity.

SANLAM LIMITED NOTES TO THE FINANCIAL STATEMENTS

for the year ended 31 December 2018

1. Accounting Policies

The accounting policies of the Sanlam Limited group as set out on pages 57 to 138 are also applicable to Sanlam Limited except for investments in Group companies which are reflected at cost or at a lower value if there is an impairment in value.

The following new or revised IFRS and interpretations became effective in the current financial year and have therefore been applied (if applicable):

- IFRS 9 – Financial Instruments
- IFRS 15 – Revenue from Contracts with Customers

IFRS 9 applies to the following financial instruments which are measured at amortised cost:

- Loans to Group companies
- Loans from Group companies

IFRS 15 does not have an impact on the separate financial statements as the revenue almost entirely relates to dividend income from subsidiaries. Dividend income is specifically scoped out of IFRS 15.

Total net reversal of impairment of investment in Group companies	362	232
Fair value of net investment in Group companies		
Investment in subsidiaries	160 047	104 615

Loans: Group companies

The loans to/from Group companies are unsecured and repayable on demand. No interest is charged but these arrangements are subject to revision from time to time. Details regarding the principal subsidiaries of Sanlam Limited are set out on page 144.

Investments in Group companies are carried at cost less accumulated impairment. The fair values disclosed are classified as level 3 instruments in terms of IFRS 13. Investment management subsidiaries are valued on a discounted cash flow (DCF) basis, subsidiaries that conduct life insurance business are valued at embedded value plus a multiple of new life insurance business and other subsidiaries and loans are valued at DCF. For a description of the valuation methodology used and sensitivities of main assumptions, refer to note 5 on page 212 of the online Integrated Report.

Items disclosed separately		
Dividends received	(6 085)	(5 630)
Interest Income	(7)	(3)
Increase/(decrease) in net working capital liabilities	-	(33)
Cash generated from/(utilised in) operations	21	(19)

10. Tax Rate Reconciliation

The effective tax rate of Sanlam Limited of 0,03% (2017: 0,02%) differs from the standard rate of taxation of 28% (2017: 28%) due to the effects of non-taxable income: -28,04% (2017: -26,89%) and non-deductible expenses 0,07% (2017: -1,09%). The expenses are incurred in the production of non-taxable income, and is therefore non-deductible for income tax purposes.

11. Capital and risk management

The main financial instrument risk that Sanlam Limited is exposed to, is credit risk in respect of its loans to Group companies. These loans are tested for impairment in terms of IFRS 9, by establishing whether the borrowing Group company has sufficient accessible liquid assets in order to repay the loan if demanded at the reporting date. If the borrowing Group company is not able to repay the loan if demanded at the reporting date, Sanlam Limited considers the expected manner of recovery to measure expected credit losses. The credit quality of the loans receivable has been assessed as acceptable within the parameters used to measure and monitor credit risk. The circumstances as at the statement of financial position date is not expected to change in the foreseeable future.

R million	2018	2017
Sanlam Limited's maximum exposure to credit risk is calculated as follows:		
Carrying value of loans granted	5 460	110

Further details of risk management are disclosed in the Capital and Risk Management Report on page 11.
